The Kaito KA-1103/1102 are OK for SSB. MW is weak with built-in antenna due to their small size. The Eton E1 is the best portable, but close to $500. It has 10 Hz readout & tuning steps so SSB sounds just like AM. I use a Radio Shack loop that is like the Terk Advantage & get AM/MW sometimes from Europe, Middle East & Africa. George (MN)

What I want is a D cup size deep plunge push up (or whatever they call them) Wonder Bra.I keep checking the Goodwill store,but no luck yet.The MacRae's department store at Metrocenter Mall (just across Highway 80 from me) sells them and Pam (a regular lady shopper at the Goodwill store) told me there is a Frederick's store at Metrocenter Mall sells them too.But first I think I need to ask Pam what size I am.

5. Worth buying new receiver???

Newsgroup: rec.radio.shortwave
Date: 2006-08-01 01:19:25 UTC
From: Doug Brandon <edude@nospamyahoo.com>
Message-ID: <3radnT0nLLGsMVPZnZ2dnUVZ_tGdnZ2d@midco.net>
Source record: 86266

I was heavily into shortwave back in the late 70s and up through the early 90s. While looking around on the internet, I came across some pages dealing with shortwave. This resparked an interest.

Back in the day I used an old Hammarlund HQ100 along with numerous digital portables. I am thinking about getting back into it again. My question is this: With most stations streaming on the Web is it really that long before there's not much to listen to on SW? From what I've read, most stations have either left SW or cut their schedules way back.

What do you all think? Is it worth buying new equipment or is the hobby dying?

Worth buying new equipment.. Not like it was in the 1950's but

Routinly listen to Australia & New Zealand daily..

Many good portables out there;

& check out this link . . .

On a good night, there seems to me to be plenty to listen
to...sometimes too much and things seem sort of crowded. That said,
there are easily fewer big international broadcasters now than decades
ago. Are the "big boys" all you want to listen to, or are you
interested in some sideband listening? If the latter, then there's
plenty to hear and you should plunk for a new receiver. There's my two
cents.

That's a fine trick, considering IBOC on MW is only being run during
the DAYTIME.

I just tried the sync circuit of my Sony 2010 on a weak 820 khz WBAP
in Dallas (I'm in San Antonio, 270 miles South). Much to my surprise,
the sync makes a difference. It doesn't always help, but it did here.

You can't imagine how many radios I have here. I've never really stopped buying them. My latest addition: a Grundig Satellit 2100. I wanted one badly when they were new (1977ish) but couldn't afford it at the time.

I've got dozens of others, ranging from 1930's floor standing tube antiques to large portables (the 2100, Satellit 650, 700 and 800) to small digital portables (Degen 1102, Grundig YB 400).

The hobby is unquestionably "dying", but there's still plenty to listen to. Do an eBay search on "Shortwave radio" and take your pick.

Mike

18. Re: Another Dallas Lankford article on synch detectors

Newsgroup: rec.radio.shortwave

Source record: 86280

If he's so mystified at the performance of various sync detectors than perhaps his simulated testing is the problem. Even double sided sync detectors that I have used greatly reduce distortion during fades (as they should), including the older SW8, the R8 and R8A. Better 'selectable sideband' sync detectors such as the NRD-535D, the newer SW8 and R8B, and the RX-350 sigficantly reduce distortion AND help with adjacent channel inteference. I am equally mistified as to why he can't hear the difference. Every time I fire up the R-388 or the Hammarlund, I immediately notice the distortion during fading because I usually don't have to put up with it.

I'm doing some research on some of the NPR stations. Also, interested in information on Jazz stations. And specifically, WDCB in Glen Ellyn, IL. I've checked their website -- and spoken with some of the staff, but I'm looking for specifics that staff might have forgotten to mention.

Is there a central clearing house somewhere for station information?? Know any good websites??

Thanks.

Baj

Very easy -- but it was her who said SOMETHING like that -- as usual,
Mr. Gleason is distorting reality to fit his adgenda:

> Date: Fri, 14 Jul 2006 07:58:09 +0900
> Message-ID: <e96j1i$su0$1@news2.kornet.net>

So what she clearly says, in exasperation, is, "IF you don't stop
SPAMming us, I will do something about it." Not hard to understand,
is it?

Mr. Gleason clearly gets a kick out of being hated, otherwise he would
just shut up and vanish.

I never stold anything in my life.Those three women in the parking lot were trying to grab my wallet.A lot of good that would have done them though.I dont use credit cards and I never carry more than about twenty dollars in my wallet.I always make sure to keep my wallet almost empty.Another time about twelve years ago,I picked up two women at Shooters (Shooters is a juke joint with billards on Highway 80,about one mile West of me) One of the women was divorced an thirty five years old,the other one had just turned 19 years old.They lived with me for a few weeks and then they moved on to greener pastures.

"Spamming" is not the right word. Spamming is unsolicited advertising.

I am not selling anything. I am telling what is going on at the management
level in radio. Some don't want to hear about it.

"Trolling" is saying something outrageous, to elicit response.

This is not trolling, either. There is nothing outrageous about the fact that 1000 HD stations are on the air,a nd more to come.

"Fibbing" is what Brenda Ann is engaging in. She says that there are millions of distant AM listeners in the US, Canada, Mexico and the Caribbean. That is just not so: AM is hardly listened to at night, and there is nearly no distant AM usage. The part about the Caribbean is funny, as except for the Greater Antilles, AM is all but gone from the rest of the Caribbean.

I was listening in the backyard to my modified Panasonic RF-2800 this evening and thinking how impressive the 2800/2900 looks (as I usually think when I look at them) and was wondering what other people think is the most impressive portable they have ever seen or used?????????
Is there a set more impressive looking ??? I can't think of one but want to hear from everyone with a REAL opinion.....

Absolutely.. And I am fully within my rights (and even obligations) to mount
a campaign against someone SPAMMING the newsgroup. SPAMMING is against the

law. And David Eduardo Frackleton Gleason... you are SPAMMING in a newsgroup that doesn't want to (continue to) hear it. A few posts regarding your opinion on IBOC are fine. No problem with that. BUT, you have gone far beyond that, and have been consistantly and agressively harassing this newsgroup and minimalizing and marginalizing people in this newsgroup.

There are others that have used innuendo, racism, ad hominem in posts answering you. I won't do that, don't believe in it. But you (speaking still of DEFG) know by this time that your continued pushing of the subject has not been welcome for some time, yet you keep it up. Just because I and others don't want to hear it anymore doesn't mean we are ostriches, it means you have worn out YOUR welcome.

Top posting is the default for google. I top post if the previous
poster top posted. However, I don't get bent out of shape either way.

Mr. Douche Bag does give douch bags a bad name. I can't see why he
wastes his time saying shortwave sucks, etc. He has a rather odd post
on alt.tasteless.

The BBC left North American relays, but that only made hearing them
more of a challenge. I like the unfiltered news on shortwave, though
you can get that on the net nowadays I suppose.

Monitor Radio and RFPI are history, but you still have Gene Scott. Why
a few days ago he was warning us about Y2K.

The British Virgin Islands and the US Virgin Islands still have AM
stations.

In fact, ZBVI on Tortola is the ONLY AM station on that island, and
the only one that can reliably cover all of the British and part of the
USA section of these islands. On the USA side there are three AM
stations, if I remember from my trip down there.

St. Kitts also has three stations on AM. Trinidad and Tobago have
four. St. Vincent and the Grenadines have one. I could go on. These
are all islands in the Lesser Antilles.

Considering the relatively low population of thes islands, their
proximity to each other and the salt water surrounding them (providing
great conductivity) none of these countries are going to have a full
dial. It's impossible. There would be way too much interference,
especially at night.

Instead, they've done what the Europeans have done - each country gets
one, two or three BIG signal stations, enough to reliably cover the
entire country and a bit more.

Local & regional service is provided by FM.

Source record: 86109

Now don't get upset, but I also posted this to the boat group.

I have been in the market for a new HF for some time now.

I have been using a $400 Force 12 vertical mounted on the stern for a few years now. It is OK, but not great.

I heard about this guy on ebay that sells an antenna called CondoBuster. It is a 13 to 30 mHz ham radio antenna for people that live in condos or other type of restricted areas. The thing is 37 feet long. It covers everything form 13 to 30 mHz including CB band with no gaps. It is like a dipole antenna except it is fed about a third or so of the way from one end. So I bought one.

Well, the thing is quite well build and very light weight. I strung it from the stern over the top of the mast and then down to the bow and put a spring in series with the antenna on each end. I placed the shorter end back by the stern and fed it with RG8X coax. The great thing about this is that this is a plug and play item. You don't have to dink around with it or adjust it for a given frequency. You don't use a balun or anything else. I just soldered the coax to the antenna. And, that is it.

For comparison I left the Force 12 on the stern. There was a huge difference between the two. Much more then I expected. With the newe one I can hear more and I get better reports from people I talk to.

All in all, that is the best $20 bucks I have ever invested. It is called CondoBuster, I bought it on ebay and as I recall the company is out of Colorado.

of course Castro is dying, so are you and so am I

the only question is how soon is he dying
if he has the self restraint of most dicators I give another few years
tops and then his brother has to see if he can comand the revolution or
not

The only in the family transfer in these kinds of nation has NK

Castro will become a god when he dies. The people of the Caribbean, Central and South America will worship him for the next million years. He should be worshiped. He held off the mighty U.S.A. The people of Antebellum South wanted Cuba sooo bad. They wanted Cuba for slaves. Nothings changed. Conservatives are salivating now to get their hands on all those poor Cuban workers that will work at new American resorts for a few dollars a day. They may be poor in Cuba, but at least with Castro they have had a leader that could not be toppled by the pathetic conservatives.

But they are not listened to off the VI's. ZBVI is running only 1 kw now,
and the ones in the USVI do not, each, cover the other US Virgin islands.
>
> In fact, ZBVI on Tortola is the ONLY AM station on that island, and
> the only one that can reliably cover all of the British and part of the
> USA section of these islands.

The BVIs cover an area that 250 watts is adequate for. There are now about 6
or 7 FMs in Roadtown, Tortola. The AM was not even on the air last time I
was there.

> On the USA side there are three AM
> stations, if I remember from my trip down there.

Yep, and each covers its own island. I think there are 4 still... 1000 and
1340 at Christianstad and an X Band and 970 on Ct. Corix. No distant
listening.
>
> St. Kitts also has three stations on AM.

Not any more. And they don't do much to cover the other islands. Most are
running very low power to save electricity.

> Trinidad and Tobago have
> four. St. Vincent and the Grenadines have one.

St. Vincent is gone, or was the last times I was there.

> I could go on. These
> are all islands in the Lesser Antilles.

All the bigger stations are gone. France is killing ORTF on 1310 and 640,
Jumbo is gone. The AM on St. Maartin is gone. Plymouth, Monserrat is gone.
>
> Considering the relatively low population of thes islands, their
> proximity to each other and the salt water surrounding them (providing

> great conductivity) none of these countries are going to have a full
> dial. It's impossible. There would be way too much interference,
> especially at night.

None of the stations really gets out much. As I said, they all have reduced power and most have gone to FM.

More important, each Island has a dozen or more FMs, and the programming of one island is of no interest to those on another... no reason to listen, and reduced power and reduced stations makes it pretty empty on the bands. Most of what you hear are the enormous 100 kw and 50 kw and 10 kw Venezuelans on every frequency.
>
> Instead, they've done what the Europeans have done - each country gets
> one, two or three BIG signal stations, enough to reliably cover the
> entire country and a bit more.

1 to 10 kw is not high power. There has been nothing higher in the area since Jumbo 540 died. And, since there are hurricanes, the towers are generally well inland. And volcanic island conductivity is terrible. The 50 kw Martinique staiton did not, ever cover the entire island. Years ago, there was a 135 kw W.W. II transmitter on 930 on one of the islands... it survived the war and lasted three decades out there. No more. Each nation is very small, and all have way too many FMs.

> Local & regional service is provided by FM.

The bigger FMs have repeaters around the islands, like Guadalupe and Martinique. Then there are local staitons. The AMs are, as I said, mostly running low power or gone.

Even sad Haiti has half the AMs it did in 1980. Most are gone, or on FM. There are dozens of FMs in Port au Prince alone. The Dominican Republic has seen a net loss of AMs recently, with about 5 or 6 in the Capital now gone.

I used to navigate the Windwards with AM RDF. I would have to use GPS today, as the AMs are not on consistently and there are too few.

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

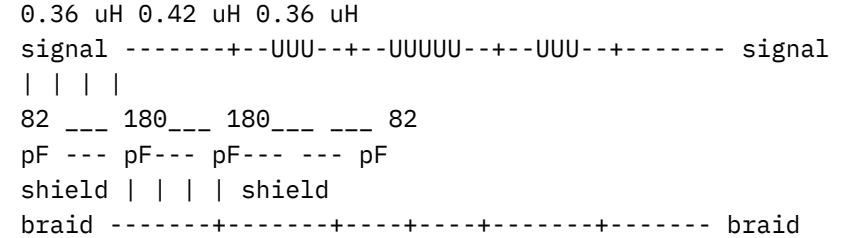
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

you do not post correctly you lie and misrepresent the fact that you
claim misspelling is proof of inferioity is amoug your dishonorable
untruth If mispelling were proof of stupdity then Albert Einstain would
be reckoned one of the dumbest men on earth
...
It is not only your misspelled and awkward posts that brand you as stupid,
but your insatiable drive to respond to each and every post made whether you
know the person or not. You, Mark, simply do not know when to leave well
enough alone. It has been documented that you made over 800 and perhaps 900
posts (using sockpuppets) in June alone. Is this the watermark of an
intellectual giant? You post idiotic, third grade level one-liners day after
day after day while at the same time saying nothing. You, Mark, are the sum
of your posts and one can, and must, draw the conclusion that you are not
overly bright. I misrepresent nothing and have not lied. I DO post correctly
and any attempt by you, a nonentity, to judge or malign me is of no
consequence and has absolutely no merit. You, of all people, certainly have
no room to pass judgment.
...

the inablity to reconize the diefferent between statements like "it
would take killing you to stop you from posting" and what would be a
true death threat "I will post stop you from posting by any means
neccasary. Indeed thatI use langauge better than ost of you is clear
proof I am not any of your inferior
...

Aw, garsh. Did someone actually post such comments or did you twist them to suit your purposes? If such comments were made then perhaps, just perhaps, they stemmed from your constant flooding of the groups with your juvenile drivel. Has it not yet dawned upon you, Mark, that you are one of the least popular posters hereabout? You rank only one half step below the most reviled poster of all time, that being Roger Wiseman.
And Mark, your delusion "thatI use langauge better than ost of you " is just that...a delusion. 800 misspelled posts in a single month quickly lay that claim to rest. You clearly DO have mental superiors in these groups and they are many. You are not as intellectually gifted as you like to comport yourself to be. We all have mental superiors and I just happen to be one of yours. I am not bragging...it is merely how life is. Learn to live with it, Mark.

PS: Thanks for the comedic relief. Who the heck is "Albert Einstain"? Is that the chubby little Cosby kid whose clothing was always food-stained and dirty?

I have 3 shortwave portables;

Doing some DX'ing here in NYC, Down By De Ribah, on a Hot Summers day;

Looking at the Degen DE1105 I took with me on this trip

& yes, thinking what an impressive looking portable it is;

- Shirt pocklet sized,
- brushed aluminum finish
- Signal strenght meter

- Thermometer . . .

Modified by hooking up a 7 foot external antenna to the whip

Take it just about anywhere without breaking a sweat.

http://www.radiointel.com/review-degende1105.htm

Your mileage may vary

Enjoy Summer !

I'm surprised he has lasted this long...pretty tough old fart.

If this is a permanent changeover of power then maybe the U.S. can find
the will to recognize that island nation off our shore and catch up
with the rest of the world.

They had a huge signal in NE PR when they went on the air. Very listenable
in nearly all of San Juan, in fact!

My suspicion is that they have become a local Roadtown station, since the
VI's have become so populated with FMs. With about 100 thousand population,
the USVI has over 20 FMs, and the BVI have 6 or 7.

That would be interesting to baseball fans I'm sure. But the bigger issue is excluding an island nation for the past half century for no good reason. Our policy of exclusion has not had the stated effect of removing Castro from power, but it has caused unneeded hardship on the average Cuban.

They screen. They don't let the old sounding calls on the air, for the most
part. This is normal news talk procedure.
>>

This is a characteristic of every AM news talk station in the USA. They have
the bulk of listeners over 55.

A couple of hours a week for a game is not enough to significantly lower the
average age in a 12 week ratings periood.

Exactly. What did I say? AA appealed much more in the 25-54 demo (although
still not much) than the oldies format, which was pure 55+.

Considering that I listen to WLW from time to time,
the average age of the caller seems to be around
my age, which is in that desirable demographic.

The big syndicated talkers (Rush, Savage, etc)
are all on 55 WKRC anyway.

> > So much for poor AM quality keeping listeners
> > away.
>
> It is very effectively doing that for most of the sales demos. Under

LA 12+,
> is 8th 25-54 and 14th 25-44. Younger, sales demos, will not listen.

Except that WLW hasn't had that problem. Maybe
KFI in LA isn't approaching things right, rather than
writing it off as "younger people won't listen."

WLW is more than just talk; it has the Reds, the
Bengals (although the Bengals are also simulcast
on Homer and 92.5), UC football and basketball,
and Xavier basketball (when there's not a conflict
with UC basketball).

It also had Gary Burbank's humor in the afternoons
for a long time, which was also one of it's highest
rated shows.

As Cuhulin also pointed out, it had the Truckin'
Bozo (and now his son since Bozo retired) in
the graveyard 12-6AM shift.

Given all that, if the 25-44 demo wouldn't listen,
then there is definitely something wrong.

Air
> America was much better 25-54, although not a real challenger.

Not all. I am most definitely over 55, and I preferred the
oldies format to AA by a long shot. AA was almost
universally national in scope (except when Springer
first started on his radio show), and there's nothing
that provides a left leaning point of view from a local
standpoint.

People here locally don't go for strictly nationally
syndicated stuff; if that were the case, 55 WKRC
and Bob and Tom on 92.5 would be a lot higher
than they are. The local classical station, WGUC
tried to go with simulcasting about 10 years ago

and lost a ton of listership, and it took years for
that to come back when they switched back to
more locally produced material.

> > That was why AA and Homer switched.
>
> Sports, with little ratings, gets big revenue. It is about the only
format
> that does.

Homer's best shows are the morning drive time and
the afternoon shows (both produced locally). The
national stuff comes on at night (after 6 PM) and
Jim Rome in the 12-3 PM slot. The main thing that
was holding Homer back was it's power and reach
on 1360; which is something you don't have to
worry about with 1530's clear channel slot. As a kid
I used to be able to hear Wirt Cain on WCKY
from the fans at church. It used to annoy the priest
to no end that his sermon was being drowned out
by a voice from a fan, of all things.

The big drawback to this part of the country is
that Clear Channel owns so many stations that
it's one big mass of blandness. However, if you
get away from Clear Channel, you'll find some
gems. Miami U's station, WMUB, is good.
WDPR, Dayton Public Radio, is good as well.
If you can pick it up (you'd need an outside
antenna for it) 89.7 WNKU is good, as is WOBO
88.7 in Milford. 89.3 WMKV is good, and the
student run station in the Lakota School District
is well programmed. Of course, you can pick
up WGUC clear up to Dayton and Homer is
easily accessable too.

Alas, 97X in Oxford is gone; the station's owners
have sold the station and taken their modern
rock format into cyberspace. However, I've heard
that their audio stream is now being simulcast
on a local station, but I apparently don't have the
antenna yet to pick it up.

Gotta get that outboard antenna soon...

The arguments about IBOC are not on target in my opinion, mainly because they aren't really "arguments". David Eduardo will come on hear and say absolutely anything to get people worked up. He doesn't care about the state of AM or the nature of IBOC. He cares about saying absolutely anything that will ruffle feathers, period. A few of the people on here got fed up and razzed him and, to be honest, I'm grateful to them. This group does not have a moderator and so we have to do whatever it takes to keep assholes like Eduardo from hijacking the group. Otherwise RRS really will become useless.

I still hold out the hope that someone will start a group that's just like RRS, but that's moderated. Then we won't have to tolerate any of this BS.

A local SWL who is friend, yes I do have some, called me wondering about the
threads regarding fading. Will has only been into SW a few years and comes
from a non electrical background and the debate got him wondering. I found
a link that I sent him and he said it made it much clearer.

For those amoung use who might not have a clear visualization I offer this link.
<http://www.tpub.com/content/et/14092/css/14092_19.htm>

If the "reflection" or refraction points, E and/or F, move then the signal at A
will suffer from distortion. Not much movement is required to really "mess" a
signal up. A similar effect can be heard on the song "Itchycoo Park" by the
group Small Faces where two reel to reels, each with the audio information,
were mixed and one was slowed down by touching the outer reel edge, a
technique called "Flanging". The slightly different audio sources mix creating
a comb fitler effect. Higher audio frequencies are effected more then lower,
hence the interest in effective audio low pass filters.

When done with white or pink audio noise and viewed with a FFT program,
"notches" or deep valleys appear in the display. Today effects boxes use
digital delay lines to achieve this effect.

Terry

You seem to be missing the point: WLW was #1
in the 25-54 male demo, not somewhere in the teens.

> > As Cuhulin also pointed out, it had the Truckin'
> > Bozo (and now his son since Bozo retired) in

Then why is the Bozo so popular? Or better yet,
why do truckers still use CB, if it's so ancient?

> > Given all that, if the 25-44 demo wouldn't listen,
> > then there is definitely something wrong.
>
> Yes. It is called AM.

WLW was #1 in the 25-54 demo. If WLW followed
your generalizations, it would be in the teens or so
in the 25-54 demo. It isn't. That implies that the
problem with AM isn't AM, but rather what's on
AM.

>
> Exactly. What did I say? AA appealed much more in the 25-54 demo
(although
> still not much) than the oldies format, which was pure 55+.

Except that even the desirable 25-54 demo couldn't
keep AA out of the basement. Clear Channel knows
how to make a buck (fortunately or unfortunately),
so if anyone thought they could make a buck on the
25-54 demo on 1530 with AA, it was Clear Channel.
But guess what? Even if you've got AA in the 10th
slot in the 25-54 demo, if no one else is listening
(almost literally so, for it to be so bad in the arbitrons)
you aren't going to make money.

While the 25-54 demo is desired, the other demos
have some clout too. Considering (as your research
suggests) that the other demos are listening to the
radio more than the 25-54 demo, maybe doing something
other than constantly chasing a demo that isn't that
interested in radio isn't a bad idea.

Hezbollah's War

"Here is the president of terror," proclaims a Hizballah propaganda film montage on Al-Manar television, showing the face of President Bush alongside an American flag. As faces of dead and wounded children appear on the screen, crude pictures of bombs rain down on the pictures, all of them labeled "MADE IN AMERICA."

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23632

Read "Recalling History's Lessons"
http://www.iranfocus.com/modules/news/article.php?storyid=8090

If you never read anything else about "Palestine" history please take the time to read this:

Myths of the Propaganda War Against Israel
http://www.frontpagemag.com/media/pdf/BigLies.pdf

All you need to know about the U.N.
http://www.frontpagemag.com/media/Homepage/nasrallah9.gif

Qana village was targeted as a busy Hizballa command and logistical center from which 150 rockets had been fired into Israel on a daily basis. Civilians had been repeatedly advised to leave and many had.

Hizballah knows from long experience that maximizing Lebanese civilian casualties is the most effective way to disarm Israel and its military, using international opprobrium as its instrument. Embedding its combat operations among helpless civilians is an old and proven method.

What other country, when attacked in an unprovoked aggression across a recognized international frontier, is then put on a countdown clock by the world, given a limited time window in which to fight back, regardless of whether it has restored its own security?

What other country sustains over 1,500 indiscriminate rocket attacks into its cities -- every one designed to kill, maim and terrorize civilians -- and is then vilified by the world when it tries to destroy the enemy's infrastructure and strongholds with precision-guided munitions that sometimes have the unintended but unavoidable consequence of collateral civilian death and suffering?

While propaganda tears are shed over the deaths in Qana, consider the reality of this war in which a civilian targeting army who uses its own civilians as shields invariably gets the sympathy vote of the Israel and America haters on the left: The area of Beirut that has been hit by Israeli forces is about as big as two race tracks and consists of the neighborhood

in which Hezbollah has set up its headquarters and arsenals, and the airports and ports which are the supply routes for Hezbollah from Syria and Iran. Follow this link to the map which no "news" media has to my knowledge shown:

"There are convincing hypotheses that connect the variation in Earth's average temperature with changes in the Sun. The "solar wind", a stream of high-energy electrons and protons emitted by the Sun, causes many things, including: geomagnetic storms that knock out power grids on Earth, auroras, and can even influence the formation of distant stars. According to this hypothesis, the solar wind also affects Earth's climate. Changes in the solar wind over recent years may account for the changes in Earth's climate."

```

True, he does do that, and yes I understand your
point. rec.games.board is a shadow of what it
once was, since most people moved off of it
to boardgamegeek.com.

> I still hold out the hope that someone will start a group that's
just
> like RRS, but that's moderated. Then we won't have to tolerate any
of
> this BS.

I doubt that will happen. I looked into it a while
back, and it does take a bit of effort to get a
moderated group together. Additionally, you'd
need someone who has a lot of time on their
hands to be moderator (due to ng traffic), and
the only ones I could think of with the time and the
technical knowledge of shortwave to do it -Ace
and Mike M.- don't really want a moderated
group.

The original Degen DE1106 became the Eton E5. With that product name freed up, Degen/Kaito made a new 1106 that is significantly uglier.

http://www.radiointel.com/Radpic/kaito/ka1106.jpg

Also check out RadioIntel for two brand new reviews: Redsun RP-2100 and Kaito 1107.

I spent some time in the studio with Bob Sievers, WOWO's morning man (and W9FJT) for many years and a bunch of time down at the transmitter site which my Grandfather used to mow. The site is just down the road from where his farm was.

I think that show is also broadcast on XM, or Sirius. I know one of these services has a "trucker's channel".

As far as why CB is stil used, it's because it's the only thing there is that's reliable across long distances and isolated areas where you won't find cell phone towers..

I'm sure all truck drivers also use Nextel two-way radio/cellphones, especially for communicating with the base dispatchers.

The point is, there are alternatives to AM radio. However, I'm of the "fix the programming" school of thought.

I doubt IBOC's going to help. In fact, it will probably mess it up even more, since most people are first going to sample the AM band on analog radios, where the IBOC hash is going to make the signal sound absolutely HORRIBLE.

Date: 2006-08-01 17:15:20 UTC
From: mcnowinski <mcnowinski@yahoo.com>
Message-ID: <1154452520.685188.326090@i3g2000cwc.googlegroups.com>
Source record: 86208

Help!

I cannot seem to properly tune SSB on my 1103 (it is a Degen from China). I have the sparse manual that comes with it, but following its instructions (tune to channel in AM, then hit SSB button and use the Fine Tuning knob) does not accomplish much. In fact, when I turn on SSB, there is very little coming out of the receiver at all (no noise, no signal, no nothing). I know that I must be missing something simple.

I have been listening in the 80/75-meter band (3500 to 4000 kHz) and I can tune in some "Donald Duck"-like voices, but switching to SSB and fiddling with the Fine Tuning knob seems useless.

Any help is greatly appreciated!

Thanks,

matt

I believe WLW is on XM now, which is rather
interesting given that the broadcast rights for
things like MLB and the NFL are probably
going to create broad lengths when nothing is
on the channel at all.

I don't think it will help, since the issues with
programming won't be addressed at all.

Dear Sir,

I cannot comment on the SSB performance of the Degen DE-1103 as I do not own one. I can tell you, however, that the SSB performance of the Sony ICF-SW7600GR is quite good as it features a USB/LSB switch as well as an analog clarifier. This allows you to adjust the phasing such that it is essentially "spot-on." It is also very sensitive and can even be used with an external antenna, if required. While my Grundig Satellit 800 and my AOR AR7030 Plus outperform it (they ought to at their prices!), for the money ($150 or less), the Sony is one sweet little receiver and it is ruggedly built, therefore eminently portable.

I should think that its MW performance would be superior to that of the Degen due to its excellent sensitivity on MW as well as its synchronous detection circuit which can eliminate selective-fading distortion. The Degen does not have this circuit and I personally find it very helpful (both on SW and MW).

All in all, the Sony ICF-SW7600GR is a very fine receiver which, I believe, would satisfy your needs well.

Best,

Joe

P.S. I own five of them!

Male. Not all. And that listening is concentrated in 45-54, and most of the audience is 55+.

Most good news talkers still have huge 45-54's. But, as each 18 months passes. the average age of AM listeners increases by 1 year. In a few years, when 70% of the listeners are 55+, revenues will drop off fast.

A prime example is KGO in San Francisco, one of the finest n/t stations ever. It does not have the sports, but it is live and local and #1 for 27 years. It's revenue is off by over 30% from just 2000 to today. And its audience is getting older by the year.
>>
>> Nearly all long distance truckers have satellite now.
>
> Then why is the Bozo so popular? Or better yet,
> why do truckers still use CB, if it's so ancient?

CB allows truck to truck conversation in a small area. Speed traps, etc. are easy to learn about. But if you survey a truckstop, you find that nearly all have satellite radio. They can't be bothered with changing stations every few hundred miles or less.
>
> WLW was #1 in the 25-54 demo. If WLW followed
> your generalizations, it would be in the teens or so
> in the 25-54 demo. It isn't. That implies that the

It is AM, and among everyone below 45. Soon, it will be everyone below 55. And totally unsaleable. This is why WLW billing has been declining slightly for the last several years.
>>
>> Exactly. What did I say? AA appealed much more in the 25-54 demo

> interested in radio isn't a bad idea.

The 18-54 is the peak listening spread. Teens listen less, and 55+ listen
less because radio does not try to target them as there is no payback. There
are plenty of subsets of 18-54 that can be staked out, and that is what
stations do.

I wonder if they'll play nothing but somber music prior to announcing his death, much like they did in Russia when one of the leaders would kick.

Ah, the good old days; cold war, no fake Hispanics...

Dear Doug,

Do you still own that Hammarlund and does it still work? If "yes" to both questions, why not put up an antenna and try it? See what you hear on the shortwaves at listening times convenient for you. If you like what you hear (and I believe you will), then you can determine if the Hammarlund (and perhaps some of the digital portables you already own) is sufficient or if you feel that you would like something more modern.

Remember that the Hammarlund, though a very good receiver in its day, is a single-conversion unit and, today, new dual-conversion receivers (portables) can be bought for under $100; the dual-conversion Eton E1 (about which I've read pro- and con) is $500 and the triple-conversion ICOM IC-R75 is about $650. (I own a factory-customized AOR AR7030 Plus which cost considerably more.) Of course, regarding price, the sky is the limit. You'd have to determine your own financial "comfort level."

However, the choice to buy or not, based on what is broadcast these days, would have to be yours. Personally, I find no lack of interesting broadcasts available on the shortwaves and I believe this situation will go on for many, many years. But only you can determine if you feel the same way.

Best of luck,

Joe

P.S. Don't sell that Hammarlund unless you must. If necessary, have it "fixed-up," aligned and tested, or even totally restored. Hammarlunds were great receivers and are very collectible today. "Used" prices will only go up.

Thanks everyone for the suggestions. I was actually thinking about the DE/KA1101 vs. the '7600GR. I know from a technical standpoint there is no comparison, but I was thinking that perhaps the 1101 feature set was good enough for my purposes. I never really considered the 1103, primarily because of the volume control (honestly, it sounds like a poor design), and the fake analog scale/LCD seems kind of gimmicky to me. I'm somewhat of a "purist." I'm sure many people will disagree with me, but I need to be happy with my purchase.

Anyway, in the end, I decided to keep the '7600GR and I purchases an AN-LP1. Everything looks good so far. I do think I could get a reasonable fraction of my money back, if I were to decide to sell everything off, while the Degen/Kaito is really a throw away radio (from the sound of it).

Thanks for the input.

"Fine" tuning means exactly that.

SSB on a portable is a delicate issue.

The fine tuning knob must be moved almost microscopically... I'm not kidding,
I'm talking fractions of a millimeter. It takes real practice. I have to brace my
hand on the radio body and use my thumb to imperceptibly move the knob.

Find your "Donald Duck" voice station(s), switch to SSB, and practice moving the knob
minutely. I can't emphasize that enough. It's almost like not moving the knob at all.

Depending on your location try some of the AFRTS stations (all are USB). You need a good
approximation
of the center point for the tuning knob. If the station is a whole number frequency, enter
that frequency, switch on SSB and fine tune. (see above). If the AFRTS station is
something like 12133.5, enter 12133, switch to SSB and move the knob "up" from the center
position. (You can use 12134, switch to SSB, then tune "down".)

Go to http://www.primetimeshortwave. com for English schedules showing AFRTS. Never has
it been more true that "Practice makes perfect", than for SSB on a portable.

Matt,

Set the BFO control on the right side to the middle point. Thats about
2.5 tweaks from either end. Then when in the ssb mode tune in Donald
Duck unitl you get the best sound then fine tune with BFO knob. It
takes a safecracker's touch, but soon you won't have to think about it.

If you know when & where a particular net tunes up then you can just
hop on the frequency directly and fine tune bfo.

Up here in New England, Spirit net meets on 3905ish weeknights around
9pm I think.

You're right. I guess my position on this is that it makes just as much sense to buy a high end receiver now as it ever did. Bandwidth is bandwidth. Ten years from now, SW might not be used the way it's being used now....by the same parties, for the same purposes, etc. However, you can bank on the fact that someone is going to use it to broadcast something (assuming that BPL hasn't destroyed it). Bandwidth *never* goes to waste.

The question, then, is really: Will I want to listen to anything on SW other than big international broadcasters and the kinds of things we're all "used to hearing" on SW. I'm pretty sure I will--largely because I don't spend most of my time NOW listening to the Big Boys. But others might feel differently.

The real threat to SW, at least IMO, is not the decreasing number of big broadcasters but things like BPL.

Dear Gus,

Regarding small shortwave portables: you now own the Sony ICF-SW7600GR receiver and the Sony AN-LP1 antenna. Thus, you own the best. In my opinion, everything else in this class is "second-rate" in overall convenience, in overall construction quality, and in overall performance.

Yes, some are "almost as good," perhaps even somewhat "better" in one aspect of performance or another, and maybe even "more value for the money," but NONE offer the total overall usefulness, the build-quality, or the advanced performance-quality of this radio set. I repeat my opinion that it is the best.

I own five of this combination (plus two of the older ICF-SW7600G models). The oldest is from 1998. All work as they did when new. I have absolutely no intention of ever selling any of them and I'm certain that, after you've grown familiar with your receiver/antenna combination, you won't want to sell it either. You may even want to buy another one!

Best of luck to you,

Joe

Only if the ads being used are the crap that
you find on Jeopardy. Life Insurance, Viagra
and whatnot. I'd argue that the big broadcasters
are so used to marketing toward youth that
they don't know how to sell to what is soon
to be the single biggest demo in the country.

> A prime example is KGO in San Francisco, one of the finest n/t

Did anyone take a look and see if the format needs
tweaking rather than say "Oh Lordy, all the people
who listen are old farts who don't buy crap! Quick,
we need a high tech solution so we can dump our
old listeners and get new ones!"

every
> few hundred miles or less.

Which means that satellite is the niche market for
truckers and long distance travellers, not radio. And IBOC
isn't going to bring them back.

If people aren't listening now, they aren't going to
listen without a very real change in radio itself,
not the technology. You can clean up the sound
and do everything else you want, but if the programming
sucks then people won't bother with it.

If you've heard people here these past few weeks,
that ought to sink in if nothing else. You can speak
numbers all you want, but technology will not save
you if the content is crap. Air America would not
have succeeded locally even if it were on FM, because
people simply didn't buy into the format. Not because
people didn't like AM.

Gee, and I thought it had more to do with less Gary
Burbank and less efficient of a news department, since
Clear Channel gutted it over the course of several
years. And the Reds sucking wind the past several years
didn't help either.

Define oldies. Oldies as in 30's-50's big band/standards,
or oldies as in 50's/60's hot wax? The latter already had
a well entrenched home in Cincinnati (103.5), whereas
the former had WVXU (on weekends) and WMKV.

Even given that, the standards would have survived if
a couple of the radio personalities hadn't moved on
(Nick Clooney ran for Congress in KY, and Bob Braun
died.)

> > While the 25-54 demo is desired, the other demos
> > have some clout too.
>
> Actually, the sales demo is 18-54 and the subsets by gender, by
ethnicity
> and by more specific ages. There are no 55+ buys.

A big mistake that will cost people in the long run,
and I'm not 40 yet myself. Most of the money
will be concentrated in the boomers who will have
money to burn because they'll be retired, and no
one wants to sell to them? The people who buy
and sell ads simply don't know how to sell to
them, and if they think about it they probably
figure that all they want are denture ads.

> > Considering (as your research

Then here's a pint to the "death" of commercial
AM as funded by the big broadcasters. If radio
is so infatuated with young demo, it will bite them
in the ass in about 10-15 years when there are more
people 55+ in this country than younger than 55,
and they have all the money.

And according to some this year is the 100th anniversary of radio broadcasting, citing Reginald Fessenden's claim of broadcasting speech and music to some ships on Christmas Eve and New Year's Eve 1906. But there are skeptics who question whether the broadcasts took place and whether they were heard.

Source record: 86235

Hello,

I do not know Dallas Lankford's e-mail address so I should like to make a comment here in the hope that he will see it (or that someone will forward it to him).

As a "program listener," I disagree with his overall assessment of synchronous detection circuits in general as I find that even the weakest one I own (on the Sony ICF-SW7600GR) is far more useful than not in making SW (and MW) signals more intelligible and listenable. However, be that as it may, and we are all entitled to our opinions of this circuit (and it is obvious that Mr. Lankford knows what he is doing so I accept and respect his opinion), I must strongly disagree with his assessment of the AOR AR7030 Plus' synchronous detection circuit and his characterization of it as being "unacceptable."

He is quite right, of course, when he states that the AOR's sync circuit often will not lock by itself on a VERY weak AND fast-fading signal (is there any sync circuit that will?) but there is, in fact, a "trick" to get it to do so.

I control my AR7030 Plus with Jan Arkesteijn's "RxWings" - a free computer-control program. As is known, when using the AOR with the remote or the radio's tuning dial, and changing stations, the sync temporarily turns off and then relocks (or attempts to) on the new tuned frequency. If tuning to the type of signal mentioned by Mr. Lankford, the radio will not re-lock, but, if using "RxWings," the sync circuit never shuts off.

In other words, all one has to do is to engage the sync lock on any relatively strong signal and then tune, via "RxWings" to the desired (very weak and fading) station. The sync circuit will maintain lock. Indeed, in over two years of ownership, once locked, my particular unit has NEVER lost lock under any circumstances whatsoever! (Of course I use the AUTO setting exclusively with the sync.)

I believe that the AOR AR7030 Plus synchronous detection circuit is a superb one and is one that greatly enhances the listening experience. At least it does for me!

I hope this is of some use to all in general and to Mr. Lankford in particular. I also want to thank Mr. Lankford for his excellent and thought-provoking article. I hope to see more along these lines from him.

Best,

Joe

Discover Dr.DaviD's
Left-wing/Neo-Liberal/"Progressive"/Socilist/Pro-Islamo-facist/Communist
Network

SourceWatch, part of the "wiki-based" investigative[?] journalism[??]
collaborative[!] to which anyone[?], including you[DaviD], can
contribute[propaganda]. - LMAO

The following non-profit foundations [and too ironic for DaviD - including
many Jewish donations] have provided at least one grant of $5,000 or more to
support the work of the Center for Media and Democracy since its inception
in 1993.

http://www.prwatch.org/finances.html

[A literal cacaphony of
Left-wing/Neo-Liberal/"Progressive"/Socialist/Pro-Islamo-facist/Communist
networks much like the Capitalist Corporations they strive to destroy.]

Bauman Family Foundation - Ms. Bauman was a featured speaker at a
Democratic GAIN-sponsored training forum for Democrats and progressives,
held during the four days of the 2004 Democratic National Convention.
Democratic GAIN (an acronym for Grassroots Action Institute and Network)
describes itself as "a national membership association for "PROGRESSIVE"
[Neo-Socialist] political professionals and organizations . . . [which]
provides an infrastructure that supports and connects our members across the
country."

...the Foundation supports numerous organizations committed to the
anti-capitalist agendas of radical environmentalism, whose ultimate goal, as
writer Michael Berliner has explained, is "not clean air and clean water,
[but] rather . . . the demolition of technological/industrial civilization."
http://www.discoverthenetwork.com/funderProfile.asp?fndid=5305

Careth Foundation - Devoted primarily to anti-war causes. In the
Foundation's view, international peace can best be achieved through a
SOCIALIST model of wealth redistribution. Consistent with its "global

community" ideal, the CarEth Foundation advocates the creation of a worldwide political system wherein all nations must answer to a "global governance framework" founded upon "a vibrant, representative, and multinational social contract."
http://www.discoverthenetwork.com/funderProfile.asp?fndid=5281

Educational Foundation of America - its raison d'etre is to "advocate for PROGRESSIVE [Neo-Socialist] change in our society."
http://www.discoverthenetwork.com/funderProfile.asp?fndid=5375
The EFA is also active in the contemporary antiwar movement, as evidenced by its status as a member organization of the Peace and Security Funders Group, an unincorporated association of foundations and individual philanthropists that give money to leftist anti-war and environmentalist causes.
http://www.findarticles.com/p/articles/mi_m1571/is_31_16/ai_64566664/print
http://www.discoverthenetwork.org/groupProfile.asp?grpid=6519

Foundation for "Deep Ecology" [What? Commun-ism lifestyle ?]

Funding Exchange - The FEX network pairs leftist donors and foundations with likeminded groups and activists who are dedicated to bringing about their own version of "PROGRESSIVE" change and social justice. Many of these grantees assume that American society is rife with racism, discrimination, exploitation, and inequity [far better than the Islamo-facist world] and needs to be overhauled via sustained education [brainwashing], activism [propaganda], and social agitation [terrorism].

FEX proudly states that over the years, its grantees have "propelled the gay and lesbian liberation movement"; "organized against economic globalization before it was recognized as a world-wide problem"[?]; and "supported the first living wage campaigns."[welfare] Additional current priorities include "the rights of low-wage workers"[dead beats]; "civil rights protections" [criminals] that endorse racial and ethnic preferences[discrimination]; and "the intersection of environmental protection, native rights and environmental racism."[pure racism] The Funding Exchange worldview is contained in the book Robin Hood Was Right: A Guide to Giving Your Money for Social Change. [Neo-Socialist propaganda comic book]

FEX's Executive Director is lesbian activist Ellen Gurzinsky.[surprise]
Among the FEX's grantmaking programs are the following: (a) the Out Fund for Gay and Lesbian Liberation, which supports "radical organizing projects working to build community among lesbians, gay men, bisexuals, transexuals, and transgender and intersex people"; (b) the Saguaro Fund, which supports "organizing projects that primarily serve and are led by communities of color"; (c) the Grantmaking Docket, which supports programs professing a commitment to "economic equity, environmental justice, social justice, anti-oppression, media and cultural activism [propaganda], movement building, and international solidarity with PROGRESSIVE movements abroad"; (d) the Paul Robeson Fund for Independent Media, which funds social-issues media productions . aimed at "media activism and grassroots organizing"; (e) the Media Justice Fund, which "promotes projects that manifest strong collaborations between social justice and media justice activists and their

agendas"; and (f) the Mart&#65533;n-Bar&#65533; Fund for Mental Health and Human Rights, which supports "groups or projects that work on mental health and human rights and are organized to support survivors of state-sponsored violence, including torture, war and displacement, and political, social and economic oppression."
http://www.discoverthenetwork.org/groupProfile.asp?grpid=7289

Proteus Fund - Founded in 1995, the Proteus Fund was set up in much the same way as the Tides Center - not as a traditional foundation, but as a public charity. This allows it to funnel money from donors to activist or radical recipients without having to be publicly associated with the groups it funds. [Sneaky, what are they hiding? Communist Party links?]

Members of the Proteus board of directors are involved in a panoply of leftwing causes and organizations. ...Labor and political organizer Cecile Richards is the senior advisor to Nancy Pelosi and sits on the directors' boards of PROGRESSIVE Majority[?]...

The Proteus Fund has seven major grantmaking arms. Among these are The Media Action Fund (MAF) which uses aggressive advertising campaigns [propaganda] to promote leftwing agendas.

The Proteus Fund was a co-sponsor of a July 2004 Voter Mobilization campaign whose aim was to register as many new [illegal allien] voters as possible, voters who could thereafter be persuaded [non-english speaking] to support the leftwing agendas [socialist welfare] of Proteus Fund's grantees.
Much more:
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5265

Rockefeller Associates - lordy lordy!
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5210
Rockefeller Family Foundation - OH My G_t!
This program funds groups whose agendas are those of radical environmentalism, a phenomenon which seeks "not clean air and clean water, [but] rather... the demolition of technological/industrial civilization." Radical environmentalism's goal "is not the advancement of human health, human happiness, and human life; rather, it is an anti-human world where 'nature' is worshipped like the totem of some primitive religion...
http://www.capitalresearch.org/pubs/pdf/FW0105.pdf
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5208

Stern Family Fund - David Stern is also a member of Equal Justice Works, a public interest law organization representing myriad leftwing groups.
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5288

Schumann Center for Media and Democracy - SCMD's investment portfolio contains tens of thousands of shares in corporations whose activities and industries represent what is antithetical to this foundation's stated value system. Among these are Exxon Mobil, Conoco, British Petroleum, Royal Dutch Petroleum, Ford, Keyspan Energy, Pioneer Natural Resource Company, Royal Dutch Petroleum Company, Columbia Gas Systems, Dow Chemical, Dupont, and General Motors - of which the Schumann Center would deem "environmentally

unfriendly." The watchdog website characterizes such an investment strategy as "using capitalist investments to destroy capitalist society." -[an old Communist goal].
The SCMD hierarchy also has close ties to the anti-war movement.

"Charitable" Foundations: ATMs for the Left
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=12423

Threshold Foundation - The Threshold Foundation is housed in the same building as the Jenifer Altman Foundation, the Columbia Foundation, and the Energy Foundation, even sharing some of the same phone numbers with those three. The Threshold Foundation supports some of the most radical activist groups in existence today. To gain a full perspective on the philosophical underpinnings of this foundation's grantees, one may visit the foundation's website, click on the "Grants" tab at the top of the page, and read through the detailed descriptions of its grantees. The Threshold Foundation was founded in 1981 by Richard Perl! [THE RICHARD PERL!!!??? - LMAO! It has ties with the Tides Foundation (see below)]
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5295

Tides Foundation - One very notable donor to the Tides organizations is Teresa Heinz Kerry [Neo-Socialist], an heir to the Heinz food company fortune, and wife of Senator John Kerry (D-Mass.). Mrs. Kerry has donated more than $8 million to the Tides Foundation and Tides Center to further her radical environmentalist agendas.

The Tides Foundation is a member organization of the International Human Rights Funders Group (IHRFG), a network of more than six-dozen grantmakers dedicated to funding leftwing groups and causes. IHRFG explicitly professes its support for "the rights enshrined in the Universal Declaration of Human Rights [UDHR] and the treaties and laws it has generated." Unlike the U.S. Bill of Rights, the UDHR, which was supported and ratified by SOVIET ruler JOSEF STALIN, regards rights not as strict limits to what government may do, but as limitless entitlements to what government must provide.

Founded in 1976 by Drummond Pike, a California activist, the Tides Foundation was set up not as a traditional foundation, but as a public charity. This allows it to funnel money from donors to activist or radical recipients, without the donors having to be publicly associated with the groups being funded. Through this legal loophole, nonprofit entities can set up for-profit organizations and funnel money to them through Tides, since, by law, non-profits are not legally allowed to directly fund their own for-profit enterprises. Donations made to the Tides Foundation are called "donor-advised funds"; these permit donors to specify their intended recipients (specific groups or specific causes). In cases where a donor

wishes to give money to a particular cause, but there is no group in existence dedicated to that cause, the Tides Foundation will, for a fee, create a group to meet that particular "need." - LMAO!

The Tides Foundation promotes a multitude of leftwing social agendas, as evidenced by its assertion, "We strengthen community-based organizations and the PROGRESSIVE movement by providing an innovative and cost-effective framework for your philanthropy." Among the crusades to which Tides contributes are: radical environmentalism; the "exclusion of humans from public and private wildlands"; the anti-war movement; opposition to free trade; the banning of firearms ownership; abolition of the death penalty; the right to government-funded abortion-on-demand; and radical gay, lesbian, bisexual, and transgender advocacy.

Immediately after the September 11, 2001 terrorist attacks, Tides formed a "9/11 Fund" to advocate a "peaceful national response" to al Qaeda's act of war. The Tides Foundation later replaced the 9/11 Fund with the "Democratic Justice Fund," which was funded in large measure by the Open Society Institute of George Soros [Neo-Socialist], who has donated more than $7 million to Tides over the years.

Tides also runs a 501(c)3 tax-exempt "alternative media source" [propaganda] called the Institute for Global Communications (IGC), which was the leading provider of Web technology to the radical left during the 1990s.

http://www.capitalresearch.org/pubs/pdf/x3797262231.pdf
Tides Foundation and Tides Center: Profile
http://www.discoverthenetwork.org/Articles/Tides%20Foundation.htm

Town Creek Foundation - states that it seeks to use "public education, citizen action, and advocacy [propaganda]" to promote "a healthy environment, an informed society, and a peaceful world." Its funding is directed chiefly toward environmental and anti-war organizations, as well as think tanks and media outlets that promote leftist ideals and worldviews.

The Foundation also supports [propaganda] news and commentary programs (on radio and television) dealing with issues directly relevant to its areas of interest -- primarily environmental and anti-war concerns. In addition, the Foundation earmarks numerous grants for organizations (such as think tanks) that seek to persuade Americans to embrace leftwing positions regarding such concerns.

Among the most notable beneficiaries of Town Creek's philanthropy is the massive anti-war coalition United For Peace and Justice, led by Leslie Cagan, a longtime committed SOCIALIST who proudly aligns her politics with those of FIDEL CASTRO's COMMUNIST CUBA.
http://www.discoverthenetwork.org/funderProfile.asp?fndid=5364

Turner Foundation - Ted Turner, the founder of the CNN television network, established his Turner Foundation. The foundation's vice president and one of its directors is Turner's former wife, Jane Fonda.

Turner is an environmental extremist who believes that the human race and most other forms of life will become extinct within fifty years unless dramatic measures are taken to forestall and reverse the environmental damage allegedly done by human industrial pursuits and their related pollutants. The dramatic measures he favors are those of the anti-capitalist, environmentalist movement, of which the Turner Foundation ranks among the world's foremost funders.

It is also a member organization of the International Human Rights Funders Group (IHRFG), a network of more than six-dozen grantmakers dedicated to funding leftwing groups and causes. IHRFG explicitly professes its support for "the rights enshrined in the Universal Declaration of Human Rights [UDHR] and the treaties and laws it has generated." Unlike the U.S. Bill of Rights, the UDHR, which was supported and ratified by SOVIET ruler JOSEF STALIN, regards rights not as strict limits to what government may do, but as limitless entitlements to what government must provide.

Hello,

Any good ways to test-out a 'new' Grundig Sat 700? I just recieved as sold 'like new' complete Sat 700 with box, cover and box. I just made a quick look-see and placed it back in the box and tonight I will take it out and try some favorite SW and MW channels. And other checks for a Sat 700 to see if common Sat ills are not going on.

Any answers would be great:)

Charlie

Think of yourself as under a sea of water with a flashlight. The surface above you with random waves occilating about in a psuedo-random fashion. If you shine a light at an angle towards the surface the light is reflected back down towards the sea floor in a fashion that is a function of the occilating waves above you. A person (receiver) looking for the light at the sea floor may or may not see the light depending if the waves are relatively calm or are raging in a typhoon. Then there is function of the clarity (rf conductivity) of the water itself... etc...

Hi,

why does a DRM software radio running on a PC require its sound input
from the 12 kHz intermediate frequency of a receiver? Why not just feed
the audio output of a radio to the PC?

Thanks,
Daniel

A DRM signal is made up of many carriers (frequency division multiplex) that are phase modulated, typically 200 carriers across a bandwidth of 10 kHz whose ideal spectral energy shape is rectangular. An AM or envelope detector will generate a mishmash of products from combinations of these carriers giving the characteristic hash sound and so confusing the DRM decoder that it cannot possibly decode the signal.

It is possible to use a SSB reception mode with the BFO tuned off the center of the channel by 12 kHz or thereabouts to output the DRM signal shifted to the range that a DRM software decoder would like (uses the computer sound card so the output spectrum must fit within its passband). Because the 200 carriers are beat against the BFO, there is not the distortion caused by the envelope detector. However, the receiver must have a wide IF passband to allow such a large offset and an audio stage designed for hi-fi, not voice communications. These are rare.

Hence, the adaptation of most radios for DRM requires the addition of last IF to 12kHz downconverter.

Pete's Analog Devices AD607 based receivert will track down below
the audible noise floor. On MW the AD607 is generally "better" as in
"will
track rapidly fading stations with multiple stations in the back ground
with
no, or very few growls" then AOR's in any position.

However the "improved AM detector" at
<http://www.amwindow.org/tech/htm/alowdisdet.htm> is about 95%+
as effective and never growls. And is a lot easier to build!

Thanks for the name of a control program for The AOR, since I will only
have it
for another 3 or 4 weeks, I didn't want to spring for a "real", as in
commercial,
software. I didn't realise the AOR acted differently under PC control
then
the local controls.

If I ever win the lottery, unlikely as I don't buy tickets, I would
love to buy at
least one of every major AMSD equiped radio, a Kiwa MAP, and the
Sherwood
SE-3.

I have come the conclussion that a good IF filter makes more difference
then the detector.

The problem with synchronous detectors is not that they aren't a good idea; it's that they're a hard to do well enough to improve upon a good envelope detector. Even when they work well, they expose poor performance in the rest of the receiver.

I built the 1993 Synchronous detector from the QST article. It works well on groundwave signals. However, it's very hard to keep the thing locked when going through a fade. To stay locked, one needs more drastic measures. A Costas loop circuit could do this. So could a second harmonic IF dedicated to locking up on the carrier.

Another major problem is the pathetic dynamic range one finds in typical IF sections. Many engineers use AGC to keep things within a fairly narrow range. The dynamic range of two in-band carriers isn't something typically measured in most receivers. Good receivers have in-band dynamic ranges in the >80 dB range.

A good in-band dynamic range, a clean LO, and a solid synchronous detector design will sound very good. Anything less will not be much of an improvement over conventional envelope detectors. This guy happened to pick the cheaper designs.

It's as if he's passing judgment on all sushi by eating the cheap, less than fresh stuff.

Those precision diode circuits date back to when op-amps were
expensive. When you need such a circuit on a chip (where floating
diodes don't come easy), you simply switch between an inverted and
uninverted signal path using analog switches. A comparator controls the
switching. It's an extremely high linearity design since no diodes are
in the signal path. It's similar to a sychronous rectifier used in
power supply design.

Not much you can do. The one advantage a synchronous AM detector has
is that it can be phase locked to whatever is left of the carrier.
Without being able to do that, some amount of phase distortion in the
output of the product detectable is unavoicable unless you go the
Indepedent/quadrature modulated route. There is simply no way to
recover the phase relationships, so some the donald duck sound is a
fact of life with SSB reception.

Unless the 1103 is defective, chances are the OP is just inexperienced.
It takes practice and patience to fine tune SSB signals on a small radio
like this. I have an 1102, and there is definitely a learning curve
involved.

Once you learn it, however, the 1102 is surprisingly capable.

Chuck Harder can be heard on 12160 weekdays at 3:00pm EDT. He has changed his format somewhat by having knowledgeable guests on the program who are given lots of time to discuss current problems. Recent topics included the Nasco corrider, NAFTA, alternate energy, and economic trends. He has settled all the lawsuits that have plagued him for the last ten years (successfully) and is planning to rebuild "For thr People."
Many of his programs are archived and are found at <www.talkstarradio.com>. and <chuckhardershow.com> His daily program starts at 2:00 pm but the first hour is on the internet..

In all my studies of various things that have been in the news at one time or another, I ran across Anton LaVie's "Satanic Bible". (as an aside, some say that the cover art on the Hotel California LP has Anton LaVie standing in a doorway). Here's a link to some of the 'Commandments' in the book: http://www.angelfire.com/empire/serpentis666/COMMANDMENTS.html

The Bushevik-in-Chief really underestimated what was going to happen
after the invasion and that lies right on his square head. Invading
troops to be greeted with flowers and candy? Get a grip on reality.

I think that Curious George needs to go work at a morgue or two in
Baghdad to realize just how badly he screwed up.

No kidding about the timeline, princess? Did I say that the invasion of Iraq lead to the creation of Hezbollah? Of course not! Fracking clueless Repug! You need to work on some basic comprehension skills.

If you think that the invasion of Iraq and subsequent attempt to control Iraq didn't have any effect on elections throughout the Middle East then think again. And that would include the election of Hamas in Palestine and Hezbollah in Lebanon. This is known as backlash.

>
> The Middle East has been awash in weapons for years, Iraq had NOTHING do
> with it. You can thank Syria and Iran for that.

Saddam always did a fairly good job of keeping the Iranians in check. When he got turfed and the Iraqi army was disbanded, the border between Iraq and Iran became like a sieve. And it's not such a large distance to get weapons from Iran to Syria via Iraq. Syria and Iran are by no means innocent but altering the balance only helped the militants in the region.

Has anybody else been having trouble bringing up the BBC World Service radio schedule web page? I've tried accessing their radio schedule page since Friday and it would not come up.

Go to - http://www.bbc.co.uk/worldservice/ Up in the top left hand corner is a link - Radio Schedules. Click it. For me nothing comes up. I've e-mailed the BBC World Service asking them if there is a problem but have gotten no reply yet.

I assume there is a problem with their site. I have two computers and have not been able to access the page from either pc. But you would think they would have fixed it by now.

Go to the same page, scroll a bit and look for "Shortwave Changes" on the right.
in the bluish tinted "box".
Click it to find schedules for SW broadcasts by target area.

Well, the government would no longer be able to monitor you with it's
mind control rays. You don't want to do that, because the black
helicopters would soon be circling your building.

Why don't you just wear a tinfoil hat, like the rest of the loonies?

Real answer - this product is called Sisalation and is a common form of reflective insulation used in Australian homes. It consists of two layers of heavy foil, a sisal webbing for strength and a bituminus filler. http://insulationsolutions.com.au/industrial/foils/

If you were to obtain 100% coverage, you would have a Faraday Cage. In reality, there are windows and doors and radio signals do enter through the apertures. In practice, cellphone coverage, bluetooth coverage and VHF/UHF coverage is severely restricted, to the point where, for example, I can only make cellphone calls while standing near the windows.

Brad.

Why? Shortwave quality is far from FM, so why not improve it with
modern signal processing silicon?

I know one thing, the apartment building I lived in until February of
this year had a roof that was painted with reflective Aluminum paint.
This stuff was terrible for HF reception, and it's a very popular
product. Nowadays it's found on the roofs of just about all largish
apartment / condominium buildings.

I am a Canadian with serious chronic health problems and I have much more experience with the health system than I would like to have, I have come close being a silent key several times, I am sure that there are some who feel that is too bad that I was allowed to breed before my medical problems became obvious. In the minds of some I suppose that I have peed in the genetic pool.

I have never heard of a Canadian hospital shutting down because the money did not last until fiscal year end. While there are some weaknesses in our system such as delays in elective procedures but when the sand was running out of the hour glass there was always a system to help me out. Here everyone can get insured, there is an option to opt out of medicare but who would?

Think of the overhead that American doctors face having to deal with multiple insurance companies, each with different forms and procedures. Think of the people who can't get medical insurance no matter what the cost. Think of those who don't have because they can't afford it. And then there are those who exercise their right not have it.

In a situation where people get treated but can't afford to pay, the rates for everyone else must go up to compensate.

Canada is not perfect but it is a pretty nice place to live and we try to contribute as best we can.

By the way, if I were an American I would vote republican but I am not a single issue voter so don't construe that to mean that I from the far right wing. Consider me a fiscal conservative with a social conscience.

too much filtering in the way. it needs that full 12 Khz to get proper
signal.

Have you ever listend to DRM?
Weak, fading DRM?

If you like the stuttering of Max Headroom, you will love DRM.

HF broadcasts by difinition suffer from many forms of distortion
between the
source and the user. AM and SSB can survive a lot of nastiness. DRM is
much less forgiving.

The PCR1000 trick I mentioned only works for strong, clean DRM signals.

I have used a crystal controlled converter to shift a 455IF to the
12KHz,
I used a 476KHz crystal with a home made mixer, and was, to say the
least,
very unimpressed. Very much like a MP3 with a very low bit rate. Even
on a
good and clean signal music simply sucked.

see: <http://www.drmrx.org/receiver_mods.html>

Milking it?

http://eureferendum.blogspot.com/2006/07/milking-it.html

Who is this man?

...the great tragedy for Qana, of which we are constantly reminded by the media, is that this is history apparently repeating itself. On 18 April 1996, the village was also visited by death and destruction. re-visiting the photographs of the time, however, who do we see at the centre of the action? Why, "Green Helmet" of course. This is a younger man, without his glasses, but recognisably the same man, in his now classic pose of handling a victim of an Israeli "atrocity".

His presence at Qana on Sunday [July 31, 2006], and his central, unchallenged role, cannot have been a coincidence. Is he a senior ranking Hezbollah official? If not, who is he?

Doesn't Hezbollah have anyone else the media can photograph?

277. Any shortwaves with remote control?

Newsgroup: rec.radio.shortwave
Date: 2006-08-02 16:03:42 UTC
From: me@privacy.net
Message-ID: <q3j1d2t81n7h01bc7ogkpsh83peb8k64hi@4ax.com>
Source record: 86439

I like to listen to my current clock radio when I get
in bed at night and going to sleep.

I hit the sleep timer button and turn lights off an
listen until I'm asleep

Does anyone make a good SW radio that has a sleep timer
in it but also has say a infrared remote control as
well so I can change "freqs" while in bed?

It would block signals from the outside to some extent, but it would be a poor shield unless all the seams between the foil strips were continously joined with very low resistance connections. Otherwise, you'd have something like the common aluminium sided house, in which radio recievers work normally.

I used to work in one of the old Standard gas stations which the interior walls and exterior siding were made of many squares of enamaled steel. The squares weren't in electrical contact with each other and both radios and TV sets worked fine inside.

It is more the large population of legal immigrants and illegal aliens
from Cuba that have made it their life ambition to do whatever it takes

to rid Cuba of Castro, no matter the cost to the average Cuban still on the island. Unfortunately they are a large enough voting block that congress continues to enact anti-cuba legislation (boycotts mostly).

How does Cuba become Chinese anyway...as usual you make no sense.

I don't really care what their political sway is. It makes no sense to
hold a nation of people (except Castro and his cronies) in a state of
perpetual semi-starvation. It should be clear half a decade later that
such a policy is a miserable failure. If anything it allows Castro to
retain a tight control on Cubans because he is the only source of their
meager sustenance.

Source record: 86514

Are there any 340 owners out there who've tried running an external DAC using the reciever's serial outputs? I know for standard Redbook DAC's the stream would have to be BMC encoded along with the 16 bit 44.1mhz mode, but didn't know if anyone has tried experimenting with this. I would love to find a way to run the post DSP signal straight into a non-oversampling converter.

Thanks
Dave

Actually China is a very good example of how opening the doors to
government relations, commerce and tourism can benefit a country.
Since Henry Kissinger and Richard Nixon initiated that policy China has
moved forward very well for the most part.

Like most people I really don't care whether the Chinese Communist
Party is in control or not...that is up to the Chinese to run their
country.

If you want to live with your head in the sand and continue your McCarthy-like rantings about the Perils Of Communism, then please go ahead. Just don't get run over as the world passes you by.

312. Any recommendations for a sw radio with good sound for outside use?

Newsgroup: rec.radio.shortwave
Date: 2006-08-02 21:09:01 UTC
From: Kurt <candybar4u@yahoo.com>
Message-ID: <t6qdnS2xRPnziUzZnZ2dnUVZ_tednZ2d@comcast.com>
Source record: 86524

Hi everyone. I'm in need of a shortwave radio that I could use outside that has a large enough speaker with clear sound to be heard from 20 feet away or more. I have been using an old Zenith Royal 3000 but i have lost the knob to change the bands, plus it has seen better days and is in terrible condition, though suitable for when I am doing yardwork, shopwork, etc. I was wondering if there are any newer radios out there that have comparable sound quality to the Royal 3000 (grundig s-350, et. al??) or if I should try to find a knob somewhere and stick with the oldie until it dies?
I know durability is an issue as well, since nothing built recently can compare with the 3000 but I can accept that just as long as the radio is large enough so I don't accidentally step on it, forget it, etc.

Yes. I normally crank up the volume once I go into SSB mode, so it's
easier to fine tune. As you adjust the knob, you hear the Donald Duck
voice, and then it suddenly sounds normal.

Interestingly, my wife is also a Canadian, she moved down here to the US just before we got married. She worked only part time in Canada. Aparantly, the health care is NOT universal, as many meds she needed she had to pay for out of her own pocket, and had to wait months for an MRI (She just had one here on one weeks notice). Yup, there are issues here too, but the Canadian system is far from perfect either.

I'm a bit biased, but an older Sangean ATS-803A
(aka Radio Shack's Realistic DX-440) will work.
I used to listen to shortwave and Jim Rome while
working on adding rails to my back porch with one.

Loads of them can be found on eBay.

There are delays I will admit that. Universal means that everyone can
participate it, it does not mean that it covers everything. I also have
private insurance to cover drugs, dentistry, the surcharge for private
hosptital rooms etc. I guess that I got really ticked off when the guy
said that hospitals routinely close because they run out of money, that
was bull and it really ticked me off. Please excuse my sensitivity.

nope nobody failed that day and I took and passed the general test for
a CSSE and no one else even took such an exam that day

the written test are fairly you insist they are yourself (wether they
are too easy is point we disagree but not that they are easy)

you are simply stupid enough to think you can jusdge a persons
intelegence for their first drafts esp when someone has dyslexia and
aphasia

no need for much to pass with a degree is Physics and MS Geophysics
(and I specailize in Sesmic wave propagation BTW which is not al
toghter unlike RF prop in its math)

Hussein was bad - no doubt about it. But there sure as hell wasn't any
sectarian violence, car bombers, people being pulled from their cars and
executed. Don't even try and convince me that the level of violence is
the same as when he was in power. Everyone from the average person to
American military officers realizes that what is happening now is

essentially a civil war.

I wish that you 29% had a grip on reality!

Getting raped while you were in the army has really soured your outlook
on the world. Get help, you poor, sick man. You may never become a
normal heterosexual, but the treatments may well ease your transition
into the gay community. Ask cuhulin just how much better he feels since
he's started buying women's underwear. Call him NOW.

371. Saving the VOA English Service

Newsgroup: rec.radio.shortwave
Date: 2006-08-03 04:07:15 UTC
From: Von Fourche <Khonakong@hotmail.com>
Message-ID: <TDeAg.9091$157.4297@newsread3.news.pas.earthlink.net>
Source record: 86483

I contacted the Voice of America and asked if the English service was scheduled to be shut down. I received this reply:

"Thank you for your note about VOA English. In fact, the President's budget proposal 2007 does call for the elimination of 14 hours a day of VOA News Now, which is the Voice of America's daily broadcast offering of English language news and features. That remains a proposal, and of course the whole budget proposal is moving through Congress, where the House has restored all of the English programming proposed to be cut. The outcome of all of this is not known at this time, so I would suggest that you stay tuned."

The House of Representatives appropriations bill would save VOA's English service. The Senate bill has no provision tho. It has to go to conference to be hammered out. So there is still a chance the VOA English service could be saved. English to Africa and Special English are not to be cut by the way.

If you think the VOA English service should be saved it is strongly recommended you contact your two Senators. You can go to http://www.senate.gov/ Up in the top right hand corner is a drop down menu where you can find your two U.S. Senators.

Send them an e-mail asking them to keep the English service going. You might want to mention that anti-Americanism seems to be on the rise, along with terrorism. So broadcasting 24/7 every day from satellite, internet, AM, FM, and shortwave in the home language of the target country and in English can only help promote peace and understanding.

It also has a timer. As the manual says, it makes an expensive clock radio.

Note that the AR7030 has two IR sensors on it. To operate mine outdoors, I had to put electrical tape over the one on the back. I discovered this problem in the field when the radio controls would not react properly.

382. Re: Tuning SSB on Kaito/Degen 1103

Newsgroup: rec.radio.shortwave
Date: 2006-08-03 08:08:32 UTC
From: Ken chattenton <k.chattenton@btopenworld.com>
Message-ID: <u8ednRuTGqwaLUzZRVny2Q@bt.com>
Source record: 86494

Hi Matt, all, from Ken in the UK,

Matt, the best way to resolve SSB signals is to listen in the SSB mode, ie, with the ssb switch on and the fine control set to the centre of it's travel.
Remember, you must tune very slowly in one KHz steps, no good tuning fast, you will resolve nothing.
Once you hear a strong (to start with) SSB signal then use the fine control to resolve the speech best to suit your hears and the signal is understandable.
If you find you can't tune the signal in by means of the fine control then just adjust the frequency by one KHz one way or the other and try once again to resolve the audio.
One final point, make sure you are listening on a band that uses SSB solely (or a mixture of AM and SSB).
The best band to start with is the 'Eighty Meter' band early in the evening.

If none of the above work then I'm afraid you may have a problem with your radio.....sorry.

I do hope the above helps, cheers, Ken, G4KIR.

That's right ... ve3 & cuhulin are, as far as I can tell, the only Americans who listen to Chuck anymore. I don't, because I refuse to have my intelligence insulted.
I suspect the vast majority of Chuck's audience is in Muslim countries, where President Bush is hated; Chuck's anti-Bush crap must play very well over there.
Indeed, Chuck's "Bush-spiracy" insanity jives very closely with the textbook Muslim anti-Semitism; the only real difference is that the latter is motivated by violence, and the former is framed by a frank detachment from reality. But in the main, the two strains of disturbed thought are the same.
Chuck's anti-SPP fantasy, for example, is really no different from the classical anti-Semitism of, say, Mel Gibson. The same conspiratorial elements are present in both: a bizarre, imaginary juggernaut of a tiny, unelected globalist cabal bent on destroying the rest of mankind (or failing that, the good ol' U.S. of A.).
Chuck Harder is sick, sick, sick. He needs his meds; he needs a shrink. He needs to lost about 200 lbs; his morbid obesity may be in part a

cause of his profound mental illness.
One final thought on this topic: You never hear Chuck say he's got all his marbles, do you? I've never heard him say anything like that. Indeed, on many occasions, I've heard Chuck say things like, "Hey, I'm probably crazy," or "You know, maybe I'm a few forks short of a place setting," and so on. But then he goes on and says that our government is so horrible, any insanity on his part is overshadowed by the malicious, criminal intent of our national leaders.
Just like Ross Perot saying back in 1992, "Yew lesson hair: Yeh, Ah'm crazy. Ah'll be as crazy as yew want me to be if that's whut it takes to save this kintry." (Please excuse the spelling here; I added it for effect.)
Yeah, just what we need: A couple of psychos to fix things in America. Sheesh!

Now, cummon guys: you've had some really good advice on this which says
(in a nutshell) that

- charging cells outside the radio with the proper charger is fine
- reverse-charging might be a culprit, but most likely
- the smokin' was just a coincidence

I'm not an international expert on NiCAD v NiMH but I've worked with
these batteries for a couple of decades: they are very similar in many
respects, not least cell voltage which is nominally 1.2v but does rise
to 1.4v+ on charge, and may be c. 1.35 v when you first pop them into
the radio. There is no fundamental difference between a charger for
NiCd v NiMH cells, bar for fact that IN GENERAL you get more mAH
capacity from the latter (assuming same phyical size), so the charger
is usually programmed to wack out more current on it's NiMH setting.
Simple /cheap chargers still rely on a constant current regime which
should not exceed c. 1/10th of the cell's capacity, i.e for 1100mAh,
110mA. Charging at this rate indefinitely should not damage good
quality cells, but they do get warm. Nominal re-charge time will be
12hrs.
More intelligent chargers use higher charge rates to shorten charge
times, but essentially terminate or throttle back charge current when a
certain voltage is reached. There is more opportunity for cell damage
under this regime, but again, as cell voltages are similar, in general
it's OK.

PS
i) memory efffect in NiCd's is not a real-world issue, so don't believe
the marketing hype
ii) anyone who tells you to completely discharge batteried before
re-charging is really saying "please ensure you shorten your battery
life so I can sell you some more"

I doubt very seriously that cubans now residing in this country really want to return to a third world country where much the population lives hand-to-mouth in poor conditions. I believe much of the anti-Castro rhetoric we hear now originated from the many non-resident people and corporations (United Fruit) that owned property there as well as those local property owners who fled the island when Castro took over. One of his first acts was to nationalize property. So they more than any other group have orchestrated this ongoing chorus of anti-Castro rhetoric and the subsequent generations have continued the song. I think that the chances of getting reparations or return of property confiscated 1/2 century ago are nil.

While propaganda tears are shed over the deaths in Qana, consider the reality of this war in which a civilian targeting army who uses its own civilians as shields invariably gets the sympathy vote of the Israel and America haters on the left: The area of Beirut that has been hit by Israeli forces is about as big as two race tracks and consists of the neighborhood in which Hezbollah has set up its headquarters and arsenals, and the airports and ports which are the supply routes for Hezbollah from Syria and Iran. Follow this link to the map which no "news" media has to my knowledge shown:

Hezbollah reports becoming less and less believable
...
Hezbollah's leader, Hassan Nasrallah, is a superb tool for the propaganda machine. Nasrallah, 46, is one of the most impressive speakers in the entire Middle East. He is a virtuoso of the Arabic language, although he doesn't forget to spice his comments with a few words in the Lebanese dialect. It nearly always seems as though he is speaking about the most important matters in an offhand way, but he is really getting his listeners to follow his thought process.

"I sometimes take the tape of his comments and watch it, for pleasure," said a Haifa resident who has been forced to go down to the nearest bomb shelter every few hours over the last few weeks. "He is simply an excellent speaker."

Hezbollah's media empire - which includes the Al-Nur radio station and the Web site moqawama.net - has been an inseparable part of the psychological war. Sometimes, Hezbollah also transmits its messages through other media, such as the Iranian television station Al-Alam. The crown jewel of the empire, Al-Manar, is broadcast in Lebanon and throughout the Arab world, by satellite.

Fled? Nice play on propaganda and the rewrite of history Communist style.
More like their businesses and property were confiscated, nationalised and
were kicked out.

Even Castro's sister left Cuba.

A considerable number of those who came recently and who left over questions
of freedom, opinion, etc., would definitely return.

> I believe much of the anti-Castro
> rhetoric we hear now originated from the many non-resident people and
> corporations (United Fruit) that owned property there as well as those

The anti-Castro feelings come from the Cuban community. If you have actually
been among that group, you hear the stories of fathers being shot in front
of the wife and kids just for saying something against Castro, or of
confiscation of property or being jailed for having an opinion not 100% in
lockstep with castro or for selling eggs from the hens you are not supposed
to have.

Mama Yunay is not responsible for keeping anti-castro sentiment alive for 46
years... it is the Cubans who lived through his tyrany.

> One

If you had worded for most of your life to make a home for your family, and
you were suddenly turned out, and told you were an anti-social element,

would you want to support the government?

Combinado del Este was filled with tens of thousands of people who simply thought differently.

You have negative credibility. When someone like you criticizes Castro,
it just makes him look good.

Castro had to have the support of a lot of people to take over. Do you
suppose there was an issue of the have-nots living much less well than
the haves? I certainly do. Don't forget that Castro received money
and weapons from Cubans in the U.S. who wanted to get rid of Batista
after his coup in 1950 or so. Unfortunately Castro turned out to be
just another in a long list of bad guys ruling that country. By
isolating Cuba diplomatically and economically we actually drove him
further into the arms of the USSR. Castro and his regime are not
suffering from our boycott activities, the average cubans are. There
is nothing to be gained by continuing this half-century boycott of Cuba
and a lot to be gained by opening relations.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

Fine about the net, but he didn't have to give the wind report.

Anyway, with dxDingleberry's record 561 posts last month, we certainly
don't have to worry about the wind decreasing in Holland Michigan :-)

Radio Havana Cuba has a music show on Sundays. Radio Japan has music shows called "Pop joins the world" and "J-Mellow" - check their schedule online. Radio Sweden has a music show called "Headset".

Sorry, I don't have the exact schedules for these programs. I have a page of links to some stations that broadcast in English, and some of these sites have program guides:

Strong & Soros in business a Partnership from Hell

From an air conditioned boardroom somewhere in Communist China, Maurice Strong--the man who would deny air conditioning for you to save the environment--has hatched another anti-American scheme.

Having cashed in his Kyoto credits and having launched his ManyOne Internet project from afar, Strong is back on the international scene, ready or not, With his latest comeback, the elusive Strong is stepping back into the limelight after his alleged links to the UN Oil-for-Food scandal took him off the radar screen for more than a year. This comeback sees Strong teaming up in the biz world with George Soros. The deadly duo aims to flood the American market with cheap Chinese made cars.

Strong's public predictions that China would replace the United States, as world superpower is not happening fast enough. So Strong and President George W. Bush malcontent George Soros are contemplating pouring hundreds of millions into a Communist China automaker that manufactures the "Chery".

Strong and Soros hope to decimate Ford, Chrysler and GM by flooding the U.S. market with cheapo Cherys on a 2007 timeline.
...
http://www.canadafreepress.com/2006/cover061506.htm

George Soros is about to invest $200 million into Chery
http://globalautosystems.com/index.php?option=content&task=view&id=521&Itemid=2

No better place to hide from American justice than China

The tantalizing tale of missing Kofi Annan pointman Maurice Strong is no longer one of those puzzling unsolved mysteries.

Canadian `Chairman Mo', a big gun in the international arena, dropped right off the radar screen in April of 2005 when his alleged ties to the UN Oil-for-Food scandal cropped up and wouldn't go away.

According to the investigative Pittsburgh Tribune-Review, Mo's location has been pinpointed, and it never required a Miss Marple to track him down.

AWOL Maurice Strong is alive and kicking in Beijing.

Canada Free Press, whose two favourite people to track are Mo and his sidekick, the self-reinvented-as-American-patriot Mikhail Gorbachev, always knew that Mo would return to China, his favourite place on Mother Earth.

What we didn't know, but read with relish in the Pittsburgh Tribune-Review, is that the smooth-talking architect of the Kyoto Protocol, has no choice but to remain in the Orient,

"Maurice must now remain in China (where he is very welcome) to avoid questioning by the FBI and Canadian investigators about the $1 million that Tongsun gave him and which Mo tried to hide in his son Fred's nuclear power company, which now is bankrupt." (Pittsburg Tribune-Review, July 30, 2006.)

Pointing out that Strong is "very welcome" in China is a polite way of saying that he's right at home where overpaid environmental spin doctors have long claimed that Maurice Strong was the only man alive who could see that the United States of America is replaced by Communist China as world superpower.

That's where Mo's sidekick Mikhail Gorbachev--who was never really ever out--comes in.

Gorbachev is living La Dolce Vita in San Francisco at the Presidio, where in 1993, he had a three-star general present him the keys to his new digs.

International diplomats, no matter how anti-American, always arrive in the West with a soft landing.

The Tribune-Review comes right out and throws sunlight on the business partnership Strong has with George Soros.

Like the bad guys in a spy movie, Strong and Soros teamed up on the Chery, a sort of poor man's made-in-China vehicle, with which they hope to flood the U.S. market next year.

CFP thinks that it's only natural that Strong would be dodging the authorities in China.

The Peoples' Republic of China is increasingly viewed as a country governed by a brutal regime, where just posting an anti-government essay on the Internet can get your imprisoned, or being Christian can get you killed.

Aside from addressing the occasional symposium on global warming, Chairman Mo remains on the lam in China.

Are Strong and other UN world players protected for life by something called UN international immunity?

Bringing Maurice Strong to justice would be as difficult as having him prove his credentials. Long ago his diplomatic status was bought for him, courtesy of an influential Canadian Liberal politician by the name of Paul Martin Sr., the late father of the recently defeated Canadian Prime Minister Paul Martin Jr.

The relationship between Strong and the Martins may be based on more than international politics, another Mo intrigue with a trail long ago gone cold.

Maurice Strong, who keeps popping up in all the right places, has always been perceived as a cross between the Wizard of Oz and Dr. No.

It would be poetic justice of a sort if the gruesome trio of Maurice Strong Mikhail Gorbachev and George Soros would finish their days on earth in Beijing.

This is surely the place where the anti-American, commie loving aging activists belong.

Now if only they would call home the murderer by default of Blue Helmets, Kofi Annan.

http://www.canadafreepress.com/2006/cover080206.htm

Who is Maurice Strong? Chairman of Visionary Vehicles' Technology and Environmental Advisory Board. He is a former senior adviser to U.N. Secretary General Kofi Annan and adviser to the president of the World Bank. Maurice created the Earth Charter with sidekick Mikhail Gorbachev. At last count, The Earth Charter, which Strong and Gorbachev claim is a replacement for the Ten Commandments, was being carted from school to school in its goatskin covered gilded case by UN Staff.

Maurice Strong would like us all to believe he is an environmentalist through and through. So, of course, he would never consider investing in a company that (gasp!) "plans to export into the U.S. and elsewhere gas-guzzling SUVs" and was sued by General Motors for piracy - unless of course the firm is owned by his Chinese Communist hosts.

What is a Chery?
http://www.theepochtimes.com/news/6-6-15/42784.html
http://www.detnews.com/2005/autosinsider/0501/02/A01-47455.htm

http://www.time.com/time/archive/preview/0,10987,1147185,00.html

The Chery can be bought in China for $3,600, and an American car dealer near you for $20,000. What-a-deal!

Chinese assembly line workers earn approximately $2 an hour. In South Korea, the same worker earns $22 and the comparable U.S. wage is approximately $60 an hour. As China becomes wealthier, naturally the value of the labor wages should also increase. However, the Communist regime intentionally prevents the Chinese currency from appreciating; this unnaturally prevents the standard of living of the working class to improve and has resulted in large trade surpluses.

This economic tactic benefits the Communist regime at the expense of the working class worldwide.

> suppose there was an issue of the have-nots living much less well than
> the haves? I certainly do.

The distribution of wealth is complicated nearly everywhere. That alone is
neither a justification nor an excuse.

One case I am most familiar with is that of a university professor who spoke
out after Castro declared the Revolution to be socialist. He discussed the
duplicity with his students and faculty. Soldiers arrived at his home, and
they shot him while the children and his wife watched. I work with one of
the daughters, who is in a position of responsability in Miami.

Castro could have let the dissidents emigrate... or forced them to. No, he
killed many to silence them and put many more in the prisions.

> Don't forget that Castro received money
> and weapons from Cubans in the U.S. who wanted to get rid of Batista
> after his coup in 1950 or so.

Tiny faction, though. I don't think it is material in this overall context.
There is more significance than substance, with the significance residing in
the fact that Castro so skillfully duped people into thinking he was not a
leftist but a populist.

> Unfortunately Castro turned out to be
> just another in a long list of bad guys ruling that country. By
> isolating Cuba diplomatically and economically we actually drove him
> further into the arms of the USSR.

The USSR alliance appears to have been set up before Castro announced his
socialist agenda before Bay of Pigs; it was likely his plan all along.
Isolation came much later after the missle crisis and the abortive invasion.

> Castro and his regime are not
> suffering from our boycott activities, the average cubans are. There
> is nothing to be gained by continuing this half-century boycott of Cuba
> and a lot to be gained by opening relations.

>

There is considerable investment by European firms and Mexican ones in Cuba.
The boycott is more a bone thrown to the influential Cuban community in
Miami.

Try The "Jazz Show" on the Voice of Russia, 9665 kHz, Wednesday 0130 (Tuesday evening in North America). Outstanding music and oustanding sound quality. Try running it through your stereo system if possible. The only problem with it is that it's too short! Only a half-hour. (I could listen to this music all night!)

The Voice of Russia also features a great deal of classical music at varying times.

Another very interesting show is "Marion's Attic" on WBCQ, 7415, Sunday 0100 (Saturday evening in North America). Very eclectic old records and Edison discs - varying types of music - presented in an odd but compelling manner.

Radio Australia (best after 0200 on 15515) and Radio New Zealand International (also best after 0200 on 13730) play music which is often interesting.

Best,

Joe

I hope this is of interest to you.

Dear Kurt,

Another "oldie-but-goodie" which might satisfy you, IF you can find one in good condition at a reasonable price, is the Realistic DX-400/Uniden CR-2021.

Clear, powerful sound is one of its notable attributes. It features triple conversion circuitry and is fairly sensitive. It works well off NiMH rechargeable "C" size batteries. (It is a battery-eater so don't use it with standard alkaline batteries - the operating cost would be too high.)

Two other radios should be mentioned, though the price is probably much more than you want to spend: the Eton E1 (with which I have no experience, but appears to have all the attributes you desire) @ $500 and the Grundig Satellit 800 (with which I have a great deal of experience; it has the best sound quality of ANY shortwave receiver through its internal speaker) available reconditioned (which means as good as or better than new) @ $430 from Universal Radio.

I hope this information is of some use to you.

Best,

Joe

THE liberal Air America radio network is going to be harder to hear in New York.

Next month, it is switching stations - to a weaker AM station, WWRL (1600 AM).

Al Franken and his lefty colleagues are leaving WLIB (1190 AM) apparently because they couldn't come up with enough cash for the owners, former Manhattan Borough President Percy Sutton and his son, Pierre.

Starting Sept. 1, Air America will be on WWRL, at the top of the dial where AM signals are weakest - especially at night, when greater FCC restrictions apply.

As The Post reported last March, the ratings-challenged liberal network failed to renew its two-year lease with the Suttons.

Relations between the Suttons and the network's execs were rocky from the start and only got worse after the network's shaky finances became known and a scandal broke out involving loans to Air America from a Bronx charity.

WLIB's future after Sept. 1 is not known, although radio industry heavyweight Randy Michaels - the builder of 1,200-station Clear Channel - has expressed interest in leasing the station as a base for a new talk-radio network.

Michaels declined comment yesterday and the Suttons didn't return calls.

Looking for power X-former to replace one from National NC-125
boatanchor RCVR which shorted secondary to chassis two evenings ago.
Need 117 vac primary, secondaries 300 vac @ 100 ma, 6.3 vac filaments
@ 3 amps, 5.0 vac @ 2 amps optional. (I can convert rectifier to solid
state.)
Will pay fair market value for new old stock and shipping. Less for
R.F.S. used slavage.
I will be at Tompkins County ARC hamfest at the Tompkins County NY
airport Saturday, 5 Aug. until 10 am, and could deal there with advance
e-mail connection.
Let me know if you've got one of these in your junque box.

73, de KC2LVQ

My mother told me stories of learning morse code this way when she worked for the railroad. She then taught me morse code this way. For twenty yeasrs after that I always wanted to be a ham and finally got m ylicense at about age 35. I was fairly active for about 8 years and pretty much lost interest when my daughter was born. In the last couple of years I have been sporatially interested again but their alaways seems to be little projects and interest that pull me away from it.

When I first went to work at tmy present job almost every tech that worked there was a ham. Just about all of them retired within a few years and nnd only a couple are still active on the ham bands. They pretty much all say that they just dont have time for it anymore. This is where ham radio is going, It is losing out to living.

I havent gotten totally out of it yet and am occasionally involed. Usually working on an antenna project thinking I will become active again. I have been asked to assist some girl scouts in getting badges but I am having a lot of trouble finding scouts that are interested although the requirements are very minimal

If they can't drum up enough support in New York - the Liberal Ground
Zero - then Air UnAmerica truly is doomed.

Mike

Looking at the actual coverage, these two stations are nearly identical in
day coverage, which is all that matters. Nights, WLIB is better, but neither
is a great signal.

Are they running IBOC, oh fake one? And if not, why haven't you rushed there to shill the system?

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

"best sound quality of ANY shortwave receiver"?????

any that YOU'VE heard. ;)

I can think of a few PORTABLE radios that I have that sound much better than
the Sat 800.
Panasonic RF1150, RF5000, RF3000, RF1600 to name a few. Maybe we define
sound quality different. I am referring to amount of available bass and
treble at the stock speaker...

The Grundig 350 or the latest radio from Redsun RP2100 should fulfill
your needs for a good sounding radio with enough strength to be heard.
Take a look at the reviews on www.radiointel.com

If all you are missing is a knob on a utility radio for the backyard I
would find a replacement and make the Zenith work. If it otherwise
does the job why spend over $100.00 on a new radio to get grunged up in
the backyard.

I've never heard the Royal 3000, so I can't give you a comparison.

But it is certainly what gave him the support to pull off a coup in
Cuba.
And it is what gave the support to continue on in the 1960's when the
USA was mistakenly trying to ignore then invade the island. We screwed
up both attempts.

Yes, lots of terrible things have happened in lots of countries.
Imagine being black and living in mississippi or alabama in the 1950's.

>
> Castro could have let the dissidents emigrate... or forced them to. No, he

I have this same model.

If you heard something with SSB off, you should definetly hear something with SSB on, regardless of where the tuning knob is. Mine makes all kinds of crazy sci-fi space noise. Try tuning to a good station (Like on normal AM), and then hit SSB. If you don't hear anything there's prolly something wrong. You should at least hear the pitch change or some noises when you adjust your fine tune knob.

Maybe what you're hearing is not SSB? For practice, I go into the ham bands and try to find morse code which is in SSB. Somewhere around 3730.

Who knows, maybe my radio is just broke instead ;)...

Not to mention the Grundig Satellit 650. Only an average performer on
SW, but has *great* sound. Not exactly a "portable", but it does have
a handle!

The 800 sounds OK - not great - but is an otherwise outstanding
performer on SW. It's only a dinky 4 inch speaker in that huge ass box.

I have both of the above radios - among many others - so I speak from
experience.

Mike

Morse Code is in CW mode which ges ''fff ff fff fff''. The BFO adds a
tone to make it go ''beep be beep beep''.

I'm not aware of a resonably priced portable that could be used with a
remote. Actually now that I think about it, a remote would not make
much sense on a portable since the radio can be moved.

You would have constructed a "Faraday Cage." These are used for EMC testing. All EM fields inside the cage are theoretically zero although that is never completely achievable. There is alway the problem of getting the test signals in and out to the test equipment. Practical cages or screen rooms can get better than 100 db. isolation.

P.S. Many apartments are already almost completely covered with Aluminum foil. It is on the back of the R14 insulation. There is also chicked wire in the stucco.

Actually most of the cell phone service is at 1900Mhz, there is a lot
more spectrum there than at 800, and 1900Mhz is roughly 15cm
wavelength, so it can propogate wave guide style as long as the hole
is larger than a 1/4 wave, and that's way smaller than even Concorde's
windows.

I wish Air American had gone under long ago. Those Kooks even stole
money from the boys scouts to try and stay going.

Yes. That's understandable. Hams these days don't want to act like hams,
they like to be appliance operators. So kids don't see that CW is
important and fun. All they see is hams gabbing on a microphone like any
CB'er can do.

''Boys and Girls Club Scandal
In July and August 2005, a funding scandal came to light. This is detailed more completely in the article Air America-Gloria Wise loan controversy. Evan Cohen, previously Chairmen of Progress Media, the then-owners of AAR, had arranged to obtain $875,000 from a largely state-funded charitable organization, the Gloria Wise Boys and Girls Club. Apparently much of this money, described as a "loan", then went to fund AAR operations. AAR characterized the situation as "absolutely disgraceful". Al Franken, who stated he had no knowledge of the details of the transaction, characterized Cohen as "a crook" and surmised, "I think he was robbing Peter to pay Paul". AAR's new parent company agreed to repay the money, and after some dispute as to how rapidly it would be repaid, placed the entire amount in escrow in September 2005.

It has not been announced when the charity will have its funding returned as it is still in escrow. The Gloria Wise Boys and Girls Club has been disbanded and is no longer in service.''

True enough, but there is a problem. The higher the frequency, the more the signals behave like light. They prefer to travel in a straighter and straighter line as frequency climbs. At 1.9 Ghz I would imagine you need a line of sight transmission path.

I find it improbably that I have difficulty using a cell phone in a house with Stucco siding and it's attendant chicken wire support while someone in a metal plane miles away from anywhere can get a good signal through a 'wave guide style' window.

well if you have code in usable form tthe best thing is wander over to
arrl.org and look lecensing info you basicaly need (today unless the
FCC has released the expect changes to a 35 question test and pass 24
or 25 I don't recall the question pool is publish in various book (now
you are tlaking by the ARRL or gordeon west (at w5yi.org) and some
radio shack and I think the RS webwite carries gordon pass it for a
license for 50 hz and up .....As I type type to get access to shortwave
or HF ham spectrum you need to pass a code test and aanother 35
question geting 24 or 25 right the General test

if you are smart abious and masochistic you can take all at one sitting
but I would rremend the tech and code test toogther (and the n on
another day the general test (and retrying the code test in case you
did not make uit with the tech license

good luck and welcome aboard

The proper place for this would be rec.radio.amateur.misc but sadly
the same people who've made that newsgroup pretty inhospitable lately
have also done damage to this newsgroup. It's a common misconception
that since amateur radio takes place on shortwave, this is the place
for it, while realistically this is just for a limited subset of
things related to amateur radio, primarily as it intersects with
shortwave listeners who listen to the ham bands.

That said, a lot of countries have reduced the morse code requirement,
or outright eliminated it in recent years. Chances are pretty good
that in most countries, there is now an entry level license that does
not require knowing the morse code, though limitations will come
with that license (such as where you can operate).

I should warn you that "memorizing" the morse code likely won't help
you one bit. It is too common for the beginner, I did it myself
decades ago, to think they know the morse code if they can send it.
But it's a different mind process, and being able to send doesn't
mean an ability to receive it. Decades ago, it was somewhat
understandable, given that there weren't the same resources available,
and it was easy to get a code practice oscillator and code key, so
off you went. Many times, the morse code was right there on the code
practice oscillator (or the walkie talkie that had a code button), and
if not it was easy to find in the encyclopedia or some other book. But
starting that way didn't leave us prepared for receiving code, when
we finally got to that point. You have to listen, and get used to
hearing the sounds, and hear the morse characters as a complex sound
rather than individual dots and dashes. The way to do this is
to listen to code sent at a higher speed, but with big spaces between
characters, and this will help later when you want to receive
at actual higher speeds.

The good news is that nowadays it's real easy, unlike 1972 when the
best choice I had was to get a vinyl record and play it endlessly.
You probably can download various prerecorded material, and listen
on your computer or burn a CD. Or get a program to run on your computer
that sends you code.

SOmeone suggested the ARRL, of course if you're not in the US then
you need to find your own country's national amateur radio organization.
And then find a local club. Many will still have a class for a nominal
fee that will teach you what you need to pass the test, and at the
very least a local club will give you a chance to interact with real
hams, and learn about the local stores (if any) that sell ham equipment
and learn of upcoming fleamarkets put on by the local clubs, that can
be a place to buy used ham equipment and peripheral things like books.

I see no indication that it's difficult at all to pass the test to
get a ham license. I got mine when I was twelve, with only a few months
of deliberate study (though a year and a half of reading the ham magazines
and books), and if anything, licensing tests have become simpler in
the years since then.

Michael

No fair fighting these neocons with facts.

The pissing contest with WLIB started a long time ago, probably when
they dumped Mike Malloy for
http://www.satellitesisters.com/
This was right after he won an award for the best talk show in NYC.

When it's over for Air America, then it will be over. At the moment, I
put no faith into these people claiming the network is going away. In
fact, it's been in worse shape than it is now. The programming is
getting better as they drop their co-hosts. Mark and Mark is better
with just Mark, Franken can handle his own show, and Garafalo just had
to go. What can you say about a host that talks about Democracy Now,
NPR, and says on-air how she can't stand those commercials. Oy!

An aircraft at 5000ft is line of sight to many many cell towers. At
10,000ft, many more.
At ground level ie you and your stucco house, you are not line of sight
to much of anything. Trees, sheds, other houses etc all serve to
increase the path losses to a cell tower which may be several miles
away.

"Line of sight" does not imply that the signal shoots out of the
aircraft sideways like a laser. It implies that the aircraft is
"visible" from the tower antennae, if you had really good eyesight!

Brad.

well done nice fakes I suppose you are pleased I am glad at least some
of the station have confirmed that Ow orked them by email and are
anxoius to confrim what I need to for a qsl card

of course in a couple of those cases I supose the email traffic could
be faked as well
but since my staion should be able to EME I expect I have some real
stations in there

I shall see

and My wife wants to thank you for really making a good impression of
Ham radio

I will use the buro to try and qsl all the forgein contacts I have not
decided what to do about the domestic stations

VF,

Since VOA English Language Programming is not met
to be received and heard by Americans in the USA.
http://en.wikipedia.org/wiki/VOA
http://en.wikipedia.org/wiki/Smith-Mundt_Act

Then "Why" would your Senators and Congresspersons
care if you could hear any VOA Broadcasts at all ? ? ?

If the 'goal' of the VOA is to reach the Non-American
{Non-English} Speaking Peoples of the World with the
"American View" of World News and Information. Then
VOA should be Broadcasting Around the World in every
Language except American {English} - Talking to People
in their Native Language - In Words that they can readily
understand.

522. Kaito KA33 Active Loop Antenna for both Shortwave and Medium Wave

Newsgroup: rec.radio.shortwave
Date: 2006-08-04 09:54:47 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1154685286.827967.189710@i42g2000cwa.googlegroups.com>
Source record: 86634

Something new in 'portable' Active Antennas . . .
for both AM/MW and Shortwave.

The Kaito KA33 is an Active Loop Antenna that is designed
for both Shortwave and AM {Medium Wave} Radio Reception.

http://search.ebay.com/search/search.dll?MfcISAPICommand=GetResult&ht=1&shortcut=0&from=R4
1&query=ka33&category0=

http://search.ebay.com/search/search.dll?sofocus=bs&sbrftog=1&catref=C6&from=R10&fcl=3&sat
itle=kaito+antenna&sacat=15051%26catref%3DC6&sargn=-1%26saslc%3D2&sadis=200&fpos=95383&ftr
t=1&ftrv=1&saprclo=&saprchi=&fsop=2%26fsoo%3D2&coaction=compare&copagenum=1&coentrypage=se
arch

Not exactly a Sony AN-LP1 Active Loop Shortwave Antenna
but it sells for about half the price.

NOTE - Sort of takes the place of the Degen TG33
Indoor AM Medium Wave Active Loop Antenna -and-
the Kaito KA31 Active Loop Shortwave Antenna.

Huh?

Is it REALLY too much to ask to ask you to work on your English
composition, Mork, and to try to organize your thoughts a bit
more...uhhhhh...rationally?

> I shall see
>
> and My wife wants to thank you for really making a good impression of
> Ham radio

Why?

Was she party to your EME fiasco? Was her callsign in there?

> I will use the buro to try and qsl all the forgein contacts I have not
> decided what to do about the domestic stations

Again...more irrational whinings.

However, is it REALLY unexpected that you should brag about some
"accomplishment" in this flamefest newsgroup...the SAME flamefest
newsgroup where you have ALSO repeatedly bragged about your "policy"
about LYING, and then not expect that someone would doubt you...?!??!

Are you even REMOTELY getting the message here that LYING,
especially BRAGGING ABOUT LYING, is ALWAYS a bad thing, Mork?

Yes, the efficient transmission of wideband signals over 60Hz powerlines is going to be a chore. BPL is just a Fad. It's a dinosaur on the brink of extinction. BPL is never going to be able to compete with fiber. I want to be able to watch any movie ever made at anytime I want to. BPL is never going to be able to support that kind of service. There are too many other kick-ass technologies making the scene for BPL to be able hang in there and compete.

If you would like to show your dissatisfaction with the whole BPL climate then I suggest you go on a safari. Kill a few BPL transponders. They shouldn't be too difficult to find with your favorite portable. Scope them out in the daytime and return at night with a gun along and just let em have it. Cops aren't going to put a whole lot of effort into trying to apprehend you. After all, they know you're armed.

I tried the Degen MW loop antenna version without much success. I ended up
purchasing this loop antenna:

http://1url.org/go/19xm

For the price I paid, I'm very happy with the performance.

what has that got to do with some ham bootlegging 50 call signs in
violation of t FCC regs

>
> Are you even REMOTELY getting the message here that LYING,
> especially BRAGGING ABOUT LYING, is ALWAYS a bad thing, Mork?

No the message I am geting is that you have no honnor by any standard I
have ever seen

I did not lie about eme contacts at all

therefore I did not brag about lying indeed I have never braged about
lying

that is another of YOUR libels

I admit that I find nessary to lie at times

and this just reinforces that

First of all, please understand that the ham radio bands are a lot friendlier than the Internet newsgroups!

The licensing process depends on what country you're in. In the U.S. there is no fee for the license itself but there is a modest examination fee for the test you must pass to qualify for a license. "The ARRL VEC Test Fee for 2006 is $14.00"; other examination coordinators might charge a slightly different fee. See http://www.arrl.org/arrlvec/license-requirements.html for more information in the U.S..

(if you're in another country, let us know which one & I think we can come up with the name/location/URL of an appropriate local organization)

A decent new VHF radio will run you around $200; a decent new one for shortwave will start around $700. Used gear is widely available and less expensive - I would suggest $125 would get you a decent used VHF set and $400 for used shortwave.

You will need some perihiperal gear - a power supply and antenna. Probably around $50-100 for the power supply. (maybe a bit more for a new supply for a shortwave rig) You can make your own antenna for a few tens of dollars or less in Home Depot/Lowes/etc. parts. You'll probably need to buy a bit of feedline, same ballpark.

You can, of course, spend a LOT more if you're so inclined!

As with any hobby, it's as much fun as you want to make it<grin>!

542. Called David Eduardo's bluff, on radio-info.com HD board !

Newsgroup: rec.radio.shortwave
Date: 2006-08-04 15:43:48 UTC
From: sidwellfriends@aol.com
Message-ID: <1154706228.282315.170540@h48g2000cwc.googlegroups.com>
Source record: 86754

David Eduardo wrote, from a previous post: "The only potentially serious competion for radio is the Motorola WiMax system, which is years away. And which will have considerable broadcaster involvement in populating the channels."

My reply, from a previous post: "Motorola Rolls Out iRadio Service (435 COMMERCIAL-FREE radio channels, for $7.00/month)". Also, as I stated, Cingular offers 80 Internet radio stations.

David Eduardo stated, from a previous post: There are very few English speaking Internet radio stations, outside of the United States.

I replied with, from a previous post:

http://www.internetmusiclist.com/radios/music.asp?L=English&music

I stated, from a previous post: "they don't even carry them in stock in his store, yet."

David's response: " Funny, but it says Spring on all the RS locations I have driven past. Anyway, RS announced that they will carry several HD radios in September, so this is another of your non-facts."

The RS saleman stated, that they will be carrying on HD radio - the Receptor HD.

David, didn't even bother to reply !

What a joke - now, you have to erect a dipole antenna, in a high position ! Hell, one can get Internet Radio on cell phones, for as little as $7.00/month through Motorola iRadio (435 commercial-free channels) ! Sucker - you have limited access to only a local market, with less coverage, than with analog AM/FM !

On 4 Aug 2006 07:52:43 -0700, Charlie Nudo of Drums, PA masquerading
as "CAINE" from his <bb69@epix.net> Google Groups account spammed:

>http://cgi.ebay<snip>

DO NOT BUY FROM THIS OFF-TOPIC SPAMMER AND DIRTBAG SELLER!

This spammer and eBay fraudster, Charlie Nudo of Drums, PA, aka
66fourdoor on eBay, is yet another annoying eBay spammer, as well as
an eBay cheat and crook. He's obviously under pressure now due to my
efforts, as he's sending my ISP and othe net ops messages threatening
legal action if they don't shut me up...ain't gonna happen! Don't be
beguilded by his "great feedback," either...take a look at his
attempts at extortion and his "buried" bad feedback at:

http://toolhaus.org/cgi-bin/negs?User=66fourdoor&Dirn=Received+by

Also, take a look at his retaliatory bad feedback left for others at:

http://toolhaus.org/cgi-bin/negs?User=66fourdoor&Dirn=Left+by

This guy's a proven nut case and crook. He defrauded me twice under
two different eBay account names, one having been shut down since then
for fraud.

Do Usenet a favor...turn this creep in for spam today at:

spam@ebay.com (account 66fourdoor)
groups-abuse@google.com (use email account he used in his spam)
abuse@epix.net (main account POP3 address thenudofamily@epix.net)

...and do NOT fall victim to his scam auctions!

He's not even worth your time.

It'd be interesting to see if there's someone in some other newsgroup
who could mount a knowledgeable and and informed defense of HD radio.
For all I know Tardo, with his inane arguments, might be doing it a
disservice.

A sucker is someone who would pay $7.00 a month for internet radio on a
cell phone, or even more for satellite radio.

What a great idea. Centralize all transportation into a restricted area
so that a couple of pounds of plastic explosive on a couple of railroad
tank cars full of chlorine can shut down the entire economy of the area.

In other words, it's a bunch of real estate speculators who want to make
tons of money off of doing the exact opposite of what should be done.
Reliablity comes from diversity and redundancy, not centralization.

what DeserTBob conveniently leaves out is, his own (2) Ebay usernames,
VOXPOPPER and XCALIBER44, have both been permanently banned from Ebay
for transaction interference, posting contact info, and warning bidders
away from auctions

you make the call !

wise assumption...

what DeserTBob conveniently leaves out is, his own (2) Ebay usernames,
VOXPOPPER and XCALIBER44, have both been permanently banned from Ebay
for transaction interference, posting contact info, and warning bidders
away from auctions

you make the call !

[snip]

You should also include the distance from the centers of the mounting bolts on each side. These sizes are mostly standardized, and you want both an electrical match and a physical match.

Antique Electonic Supply lists a number of replacement transformers in their catalog/website.

rec.antiques.radio+phono is another good place to post your request.

The analog version of the Recepter is a surprisingly good bedside AM dx machine using a Terk Advantage AM loop antenna.
The poor reception mentioned in a subsequent post here refers only to FM reception without a dipole of which I am not interested. The pigtail for FM included with my analog Recepter is more than adequte. The addition of a F-connector for an external FM antenna I am sure would make it a fine FM machine.

The RecepterHD is a very good analog FM receiver. Better than a
Tivoli Model One.

Ya, I'm in the US. That's a whole lot of money and it is doubtful that I can get it very soon so what do you recommend I do in the meantime? Should I get a liscense now or does it eventually expire? Should I try to find parts on ebay or something? And one last thing, my uncle says he knows someone with some extra ham radios, should I look into that?

Back in October 2005, you can see an example of SeeingEyeDog's
intelligence, education, and erudtion. He was vigorously arguing that
it was perfectly correct to refer to Islamic Crusaders. Memorable
quotes by SeeingEyeDog include

> And you have conveniently forgotten the history of Islam's murderous
> "Cruisade".

> The word "crusade" is not reserved for the Chritian Crusade

> The Islamic "CRUSADE" is alive and well

> This isn't fairy tales, this isn't centuries old history, this is an Islamic

"Clearwire" is in development. There is no service yet.

See this:

"Imagine a future like this: You're on the Acela high-speed train from Boston to Washington and you want to touch base with friends in Beijing and London. You pull out your laptop and moments later are catching up via video link -- even as the train thunders along at 150 miles an hour. Later, as you zip past the White House in a cab, you grab the same laptop to catch up on e-mail, then boot up your media player to watch a few minutes of the afternoon ball game of your hometown favorite, the Boston Red Sox.

If Craig O. McCaw gets his way, you'll be able to do all that, and more, in as little as three years' time. McCaw's Clearwire Corp. has amassed enough licensed radio spectrum to create a nationwide, wireless broadband network based on an emerging technology called mobile WiMAX -- a powerful cousin of WiFi. Clearwire got a big boost on July 5, when Intel Corp. (INTC) and Motorola Inc. (MOT) pumped nearly $900 million into the company. The tech giants aim to turn WiMAX into a mainstream consumer technology and hope to make lots of money selling the chips, laptops, cell phones, and other gear that work with it."

There is no existing service. They do not even have all the spectrum needed locked up, and it may take some of the VHF TV channels to give this enough bandwidth. IT IS NOT HERE TODAY, NOR TOMORROW.

In fact, they do not even have all their financing together...

Most of those are not "English Speaking" but, instead, stream English
langauge music.

Terrestrial stations in nations where little if any English is spoken have
played English music for decades.

However, you started this branch of the thread by talking about getting
breaking news from all over the world. I have news for you: most of the
world does not spak English. Very, very few of the streams you list have any
news coverage. The US has the bulk of content-laden streams, and most come
from, bingo, terrestrial radio stations.

You are gullible if you trust a salesperson at a RS store to tell you about
Radio Shack's marketing strategy. The fact is, they publicly announced they
would carry a "line" of HD enabled radios.

Nice try. You are 0 for 3. Struck out. You did not even get any balls.

On second thought, the op simply may not have had the basic required skill to determine how a true eme signal should be received. He may not be suited per FCC rules to hold or continue to hold even the entry level technician ticket. Really, thats no flame intended. If he is that stupid he could hurt himself playing with RF!!

He's been busted in Miami...
And down San Diego way...
He's been busted in Portland...
And in Ciudad Jaurez they say...
Edweenie's been busted... Busted USA...

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well.

Lies about who you are or what positions you've held are going to catch
up to you sooner or later. People typically learn this long before
they're Tardo's age, but they all learn it sooner or later.

No matter how many times you ask this, it is still none of your business...
unless I need a visa to visit Michigan.

577. Re: Recommendation (new radio, return, Sony vs. Kaito, etc.)

Gus,

I got a similar start, listening to David Goren's May 26, 2000 Lost & Found Sound piece on NPR. I got a Sangean ATS-909, a good little radio that has now (6 years later) pretty much given up the ghost. Never found a numbers station (although my wife once picked it up, asked what a numbers station was, and found a Cuban station in less than 10 minutes), but enjoyed the radio a great deal.

I look forward to see what folks say, since I'm going to need something to replace the ever-increasing flakiness of the 909.

Huh? It is your lie about Clearwire being available that stands out as the Internet Lie of the Day. Only slightly less significant is your fib about Radio Shack, followed by the one about the huge quantity (not) of local breaking news in English from all over the world. There are less than a dozen countries where you might have some local breaking news content in English, and a couple of hundred where you would not.

Partial list... remember, streaming does not mean it has news... breaking news.

Definite
US
Canada
Britain / UK
Australia
New Zealand
Ireland

Maybe...
South Africa (not known for open dissemination of breaking news)
Hong Kong (now Chicom controlled)
India

Unlikely
Any of the Caribbean English speaking nations
Belize
Guyana
African English speaking nations like Ghana, Zimbabwe and Rwanda.

Now how many countries are there that would have no English streaming of news?

Just in this Hemisphere
Mexico
Puerto Rico (ok, a territory... but no English)
Dominican Republic
Cuba
Martinique
Guadalupe

Curacao, Aruba, Bonaire
Venezuela
Suriname
Fr. Guyana
Ecuador
Colombia
Per&#65533;
Honduras
Guatemala
el Salvador
Nicaragua
Panama
Costa Rica
Bolivia
Chile
Paraguay
Argentina
Uruguay

Starting to see allt he places where breaking local news in English is not going to be streamed?

I see... a US Visa in a US passport? I could probably sell that on eBay for
as much as the inverted airplane stamp.

I will keep on believing it because the record demonstrates it. You
weave a tangled web, but this time you're the only one who got caught
in it.

In other words, you're BUSTED.

This is the lastest post, after I posted links to the Motorola Rokr E2,
which dumped iTunes for iRadio. I'm getting worried, about this moron:

Avid Eduardo wrote: "The rokr phone, which has had horrible sales, is
not the Intel/McCaw/Motorola Clearwire system. This is just a phone
with an Internet connection and limited song storage. Clearwire is
several years away, as I said."

I replied: "Sorry, this is the Rokr E2 phone, which dumped iTunes for
iRadio - nice try ! This phone is due out, now !"

Motorola has already rolled out iRadio - the Rokr E2 is due out now,
with iRadio - good try, asshole !

597. My Degen/Kaito 1102 SSB Mod

Newsgroup: rec.radio.shortwave
Date: 2006-08-05 00:14:00 UTC
From: z1z1@mytrashmail.com
Message-ID: <1154736840.216827.209990@p79g2000cwp.googlegroups.com>
Source record: 86656

Many of us who own this radio have noticed that tuning to SSB is very
difficult because you have to move the wheel in little 1/64MM
increments to
fine tune it. Been sick of this, I did a mod to reduce the range of the

wheel to about 1/3 what it is from the factory. This makes it much,
much
easier to tune into SSB broadcasts. You'll get much better sound
quality
with less fussing.

Now, on to the good stuff.

1. Take radio apart.

2. Remove the 3 or 4 screws holding the analog circuit board to the
case.
http://i72.photobucket.com/albums/i185/rearwheel111/65c2054c.jpg

3. Identify the 3 pins of the POT. Middle one (2) is the feed, and 1
and 3
are the far ends. This is a 100K pot. The mod is to tie 2 50K resisters

between pins 1 and 2, and pins 2 and 3. This is very tricky as there
are
many SMD components in there and many oppurtunities to ruin your radio
if
you arent good at soldering. This is how I got mine in:
http://i72.photobucket.com/albums/i185/rearwheel111/74a278fd.jpg
http://i72.photobucket.com/albums/i185/rearwheel111/7cd97215.jpg

I didnt have enough room to try and solder both resisters directly, so
one
was extended with wires for a bit more room.
Sorry for my camera's suckage but you get the idea.

4. It would not be so hot if those resisters started shorting to nearby

circuits, so I applied liquid and vinyl electrical tape to make sure it

doesnt happen.

The rokr is not Clearwire, which you said was available now. It will not be
available for several years. Get your story straight. Another phone with a
web connection is not news.
>
> Avid Eduardo wrote: "The rokr phone, which has had horrible sales, is

Since the link you presented did not work, and you offered no explanation
(you simply placed a link, with no details) who would know? In any case, I
repeat: a phone with EVDO connections is not a very good radio. There is
nonly partial coverage, and it is very spotty nationwide.

You were referring to the Clearwire thing with McCoy and Intel... 400+
channels. Now you are backtracking to present an EVDO capable cell phone.
Big deal. I have EVDO with two separate carriers, because is it so
inconsistent I have to pick "best signal" between the two.

I have read that some cell phones can surf the web,do emailing,send photos,get tv stations,and now soon,coming to a cell phone near you,pick up radio.Pretty soon,cell phones will be able to do everything but make phone calls.

It may work for you...

The biggest thing is that you were talking about Clearwire, and suddenly popped up with a single service cell phone using EVDO. Hardly a threat to radio.

Omega One Radio is on the air now on 13.556.00 MHz on Lower Side band.
We have fixed the audio so the audio is a lot stronger now, then
before.

Todd Daugherty N9OGL

Licenses expire but are renewable for free without retaking the exam. Besides, the license term is 10 years; if you haven't found gear by then I'd imagine you'd have lost interest<grin>. So nothing would be wasted by getting the license before you're able to afford equipment.

The exams are generally given by local radio clubs (there's more info on that on the arrl.org site as well) and getting involved with a local club is also a good way to get to know what used gear is available. Through judicious use of eBay or other second-hand sources, you could get *something* on the air for considerably less than the numbers I quoted. But that kind of thing is a lot safer if you have a local mentor who knows what's worth what.

Yes, I'd look into your uncle's connections - but be sure they actually *are* ham rigs. A lot of people tend to confuse ham and CB - and occasionally pretty much every other two-way radio service. While you *can* modify CB radios to work for ham purposes, it's not a trivial task.

Absolutely the best, bare non, table radio in America. It is pretty much the
standard of all radio folks I know. I have about 7 of the mono versions, and
just got two of the HD ones.

are you using an ex Ham transmitter?
I hear with LSB/USB get further than AM but is the LSB really wide enough
for quality audio? Got a grandpappys MP1000 here that will rag 50 watts AM
all day long, but the band width is to narrow for anything like nice music
audio... Speech is nice though. Maybe there is a wider AM filter than stock,
some Ham wizardry to make it fit a decent audio element on to the carrier,

'Transmitting on illegal frequencies with an illegal transceiver?
Only stupid Toad would do that.'

Gather around the legal frequencies this evening at 14.331 as we get a forum of LEGAL Hams together to discuss the nefarious activities of Toad and Roger. Look for this forum to begin on or about nine p.m. eastern time. Toad cannot join in, nor can KB9RQZ, since they are not licensed for this freq. Roger needs no invitation...he will lurk and jam as he sees fit.

that reply is not in context with the question???? ok I will see if Skippy with let me through. USB or CW

The frequency he is using is legal with an output of 10000uV/m at 30m.
That's a pretty good signal just to play with. This can go quite a long ways
via skywave, and even a good distance via ground wave with a sensitive
receiver.

yup that's QRP alright.

In light of what you've said here and on other groups, we have
absolutely no reason to believe that you know any "radio folks", or
that you've ever operated a radio. You have no credibility. You have
been caught in lie after lie, distortion after distortion, etc.

You are BUSTED.

Since I work in radio and have for decades and such is fully provable, it is obvious that I know radio people. It would be impossible that I not know them. So, the one propagating lies is you.

What HAS happened is that I have disagreed with you and dxAce, neither of whom have presented a single piece of factual evidence to prove anything. Please, go for it: name one single lie!

He's been busted in Miami...
And down San Diego way...
He's been busted in Portland...
And in Ecuador they say...
Edweenie's been busted... Busted USA...

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well.

643. Sony ICF-6800W

Just curious how many of these excellent, but problem-prone and difficult to work on, radios are out there that need work. Anyone got one of these that doesn't work right?

I finally found someone local here in Ann Arbor that is extremely good with these radios. I would be interested in buying another 6800W (Orange only) if it's in excellent shape cosmetically but has a problem.

Jeff

>From radio-info.com:

In debate, over iRadio and Internet Radio, for cell phones, versus HD Radio:

David wrote: "Cell phones sell a few hundred thousand to the low millions. There are nearly a billion AM FM radios. Do you see the problem yet?"

Motorola sold 70,000,000 cell phones last year and has sold 800,000,000 world-wide.
There are 600,000,000 cell phone GSM subscribers. What David doesn't realize, or doesn't want to admit, is that HD Radio is going to have to antiquate 1 billion analog AM/FM radios, so this works against HD Radio.

We have no reason to believe anything you say, given that you've
already lied about what your name real name is and what positions
you've held. I seriously doubt that you've ever worked in radio, let
alone that you currently do. The poor and uninformed nature of your
arguments in most threads suggests that you are very much an outsider
to radio.

> world-wide.

Yes, over a period of 17 years. The average life of a cell phone is about 18 months, so that means that about 650 million of those phones are no longer working.

US Cell phone sales of Motorola were less than 30 million units, divided among a wide line of individual phones.

> There are 600,000,000 cell phone GSM subscribers.

In the entire world. In many countries, cell phones have substituted for land lines, and are not used as entertainment devices. We are still quite a ways away from any single phone (the one you harp about is still unreleased, 8 monts after its announced ship date) having more than even 1% of the US population.

We have not even gotten into the fact that data pnone capability adds a charge to the monthly bill. I wanted to upgrade my Palm 650 to the new model, and foud it would be $35 extra a month for the EVDO data, that is over $400 a year... not even worth it to me.

> What David doesn't
> realize, or doesn't want to admit, is that HD Radio is going to have

HD does not affect any existing radio a bit. All HD stations are backward compatible. Just like FM stereo is compatible with the 75% or more of FM radios that are mono.

Never. dxAce finds it funny that I have two given names and a maternal and paternal surname (or surname and middle name in Anglo context) I have had all 4 since I was baptised. No lie there... they are even on my driver licence, and the deed to my house.

Very funny. You are more delusional than dxAce, who is simply and obsessive troll.

Then why would the NAB have had me address 6 different conventions since 1982? Or the RAB? Or R&R?

Perhaps because you deceived them about who you are and what positions
you've held?

Look, your trolling is a minor nuisance, but when you push things too
far and get caught, at least have the balls to fess up. You were nailed
about as badly as anyone ever has been. To keep denying the obvious
just makes you look like some kind of weirdo.

I have not heard any complaints since the early 60's.

The only issue is that stereo operation is more subject to multipath... a
few A's run mono because of that.

Oh, sure. I'm going to be on a panel with the programming heads of 5 of the
10 largest broadcasters in the US in front of about 2500 persons who are
also broadcasters and nobody is going to know?
>
> Look, your trolling is a minor nuisance, but when you push things too

To what? Having a name? To the NAB making a small mistake?

If you wanted to verify, you could. But it is a lot more fun to have someone
to attack because you disagree with them, and ad hominems are a lot easier
to launch than a factual approach.

Having a name is fine. It's lying about your name that's not cool.

>
> If you wanted to verify, you could. But it is a lot more fun to have someone

Apparently it's a lot more fun to go 'fibbing' on the internet and
lying about your true identify. Though I must say, it's hard for me to
see the fun in it, especially for an adult man.

.....
.....
Further to Abruxis' practicing psychiatry without a licence, I would
take issue with one specific charge: that of Harder being an
anti-semite. Although both Jews and Arabs are Semitic peoples, I take
it that you are accusing him of being anti-Jewish. I don't think this
is true and I would be interested in seeing your evidence for this
statement. I have listened to Chuck off and on for 15 years and I have
never heard him utter any thing anti-Semitic, indeed for some time he
had as a regular guest one Victor Mordecai (as I recall) who discussed
current events from an Israeli perspective. Note that the Iranians are
not a Semitic people: they are Aryans. They even changed the name of
their country from Persia to Iran in the 30's to curry favour with
Hitler: Iran being easier to pronounce in Farsi than Aryan. But I
digress.
The greatest shock I ever had from Chuck's program was on Jan 1,
2000. For the previous two years Chuck had been banging the drums of
Y2K doom and gloom and had been touting generators, a year's supply of
dried food, solar cells, and other disaster products. Many of his
followers spent their last dime on this stuff. When, on Jan 1, nothing
happened, I tuned in to see what Chuck would have to say to his flock.
Nothing. Ne..rien, nada. He serenely cruised through his broadcast as
if none of this had anything to do with him. Pretty shabby, I thought.
Later reflection brought me to the conclusion that considering the
litigious nature of US society, he dare not say anything in fear of

getting the pants sued off him. It is sad that so many listeners hang on every word of radio pundits and treat their ideas as gospel. Chuck Harder has many listeners and obviously, many detractors. I would suggest that the best course of action is to listen to a few of his programs and make up your own mind. Of course, if Abruxis comes up with some real evidence, that would change things.

R&R means Rest and Relaxation.I had three choices,Hong Kong or Danang or Tokio.Since I had already had an eight hour layover in Tokio and saw some of the sights of beautifull down town Tokio (a lot of construction was going on in the Ginza area and many places in Tokio,I saw it with my own beady little eyeballs,they was getting ready for the 1964 Olympics,big mounds of dirt was piled up along that street in the Ginza,new Subway additions,lots of rebuilding all over Tokio) and since our Pan Am Blueball stopped over in Hong Kong for only half and hour and we were told to stay on the Blueball and since I prefered to do my R&R in a Country other than Vietnam,I chose Hong Kong for my five days R&R.

No they don't. We have mono mixdown speakers in every one of the 10
production rooms in LA. Considerably more than half of FM listening is mono,
and we want to make sure there is no phase cancellation or that things sound
different in mono.

Has anybody got any experience of opening the Sony ICF sw40?

I have taken all the 4 screws off the back, including the one in the
battery van and the aerial one, but I can't get to open it and I fear
I'll break it if I force it a bit.

Any hint?

Thank you

Ottavio

Doesn't Sony have arrows pointing at the screws that need to be
removed to open the case? Finger pressure in the right spot should do
it if the screws are all out.

It is ridiculous that you don't recognize it for what it is, a simple
mistake. I can point out spelling errors and mistakes in nearly every NAB
program... when they do a convention for tens of thousands of people, there
will be a coupple of gaffs.
>>

Most of them did. They read Inside Radio, they read Radio Ink (#2 Major
Market PD of the Year a few years back in their industry poll) and RBR and
R&R and so on.

Tell you what: Call Tom Tyler, editor of Inside Radio, and ask him. Or call
Owen Charlebois, President of Arbitron. Or Mark Mays or Randall Mays of
Clear Channel. Ask any of them. Go ahead.

>> > Look, your trolling is a minor nuisance, but when you push things too

Never did. I use several variants, with and without middle name and second
given name, as do most people. William Ferdinad Barkley, III is Bill to
friends, William F. Barkley on his busines card, and the full thing on legal
papers. All depends on the venue. Same name, differnt extensions.

Yet you could verify this all... I even gave you names... but you won't. It is more fun to be in denial, and use your lies to try to invalidate the point that HD is here, like it or not.

Yes, it has 3 arrows, but what combination of finger pressure should I
apply? All 3 altogether, one by one?. The solution may be so simple but
I can't get it.

Cell phones are updated every two years, and people on average, upgrade theeir phones, at the same time. But, HD Radio is going to have to fight all those happy AM/FM analog radio users.. da..

Hi,

Have been looking, and listening, but can't seem to come up with any fairly
frequency/time recent listings.

Anyone know of any English broadcasts from IRAN to North America ?
North Korea ?

Thanks,
Bob

Not so long as the Rx320D keeps selling. As a satisfied listener (and
user of great customer service), the 320 does what it does very well.
It does lack Sync AM, but zero beating on SSB works well.

Cell phone hardware is upgraded, on average every two years, and comsumers upgrade their phones at the same time. As I stated, Motorola alone, sold 70,000,000 cell phones last year. Your rebuttals should be a waste of time - a rocket scientist isn't needed to figure out the popularity of cell phones. Your numbers are totally wrong, and this study isn't even current:

http://hypertextbook.com/facts/2002/BogusiaGrzywac.shtml

"iRadio" to Crowd Radio in the Dash"

http://www.rwonline.com/reference-room/iboc/2006.02.15-04_rw_iRadio_2.shtml

iRadio is going to kill HD Radio, in the dash, and table-top HD Radios don't have a prayer against iRadio in cellular telephones (HD Radio just gets, with limited range, local radio stations and needs a dipole antenna mounted in a high place). This is not to mention, satellite radio manufacturers pay car manufactures $100 for each installed radio, plus they give free limited subscriptions - smart marketing move, unlike the, "Discover it !", HD Radio advertising campaign - a long uphill battle to get people to discover this fraudulent technology - cell phones, satellite radio, iPods, etc., have already been discovered, and their numbers are growing !

This became a large concern at when I was at CBS, where some of the personalities were doing their own production. They didn't understand, nor care to understand, the concept of mono compatibility, since the studio monitors were stereo, the production rooms were stereo, and to check for mono compatibility required an extra step. Something they were loathe to do.

With one guy who thought he was God's Gift, I would get an angry call about once a week from the GM, who was listening on a stereo radio, but in a lower signal area, so it was blended more to the mono, about a piece of this guy's production which was virtually unintelligible. In many cases, inaudible, because he'd discovered the polarity inversion button on the console, and would throw once channel out of phase because it made his pieces sound 'More stereo.'

The mono listening figure is closer to 2/3's than a half, and most people never realize it. As long as the pilot is lit that's stereo enough. So it becomes a real matter of concern with broadcasters that product be compatibile with the mono.

Music mixers and producers spend a LOT of time insuring mono compatibility when they mix down records. That can be, and has been, a big chunk of the music productions that I've worked.

And high loss digital codecs such as those in use on most radio stations, HD or otherwise -- usually due to a manglement edict that expense will be concerved when it comes to server space....even for music -- make mono compatibility even more of a concern.

Yes, it all depends on the venue. If it's a venue you wish to lie in,
then you use one name. If it's a venue you wish to tell the truth in,
then you use another.

Folks using current receivers will not notice any difference. We have over 25 on the air, and not a single indication of degradation of the analog signals on AM or FM stations... many have been on for over a year... and I never thought of this... the ones that are on the longest also have higher ratings now than they did a year ago... maybe you discovered somehting... we need to finish doing the last 40-some stations.

> they receive Internet Radio, and iRadio shortly... HD Radio is dead
> out of the gate !

There are costs involved. 80% of cell phones sold are the ones that come free with new service (people run the contract out, and switch carriers to get the free phone) or ones that cost less than $100 with the plan. The EVDO enabled phones are all far above this cost, and the data features add additional monthly charges.

Add to that the fact that a significant percentage of cellular phones are obtained and paid for by employers. They are not going to pay extra for entertainment features that reduce productivity.

All these features you talk about are high end phones that require a monthly charge in the $50+ range. I remind you that that is $600 or more a year, and the median household income inthe US is around $42 thousand. We are talking about 1.5% of famiuly income, per phone here.

Terrestrial radio is free.

That is 70 million in the world. The US market is very static, with the
growth being in lesser developed nations. And no single model sells 70
million in the US, especially top of the line ones. There is a reason that
kind of phone is often not even stocked at retail... they don't sell very
many.

> cell phones, satellite radio, iPods, etc., have already been
> discovered, and their numbers are growing !

The current implementation of iRadio has not been implemented by a single
carrier in the US, a year after the product was announced. The previous rokr
was an absolute dud... most pundits say that is because people do not want
to store tunes on a phone... they want to store them on an iPod. Most people
do not want to listen to the radio on a phone, either.

The watershed moment will occur with the introduction of Clearwire, years
away, but with robust WiMAX technology, national coverage (unlike the spotty
and highly incomplete EVDO networks) and a device built to be
multifunctional, not built as a phone with add-ons glued to it.

Ah, ha. This is why we do not let any talent do their own production. Only a
production person can do it, and the talent does the voice only.
>
> With one guy who thought he was God's Gift, I would get an angry call

I never had anything that silly happen, but certainly learned from the spots
where either the bed or the vice were phase cancelled.
>

As you can tell form some of the posts, there is not a recognition of this.
I don't believe most jocks understand this. A parallel anecdote was my
experience of a time back asking in a sales meeting, "well, what percent of
listeing is in the car here in LA?" All answeres were in the 50 to 66%
range! (LA at the time had 29% in car listening).
>

> Music mixers and producers spend a LOT of time insuring mono

And they also do mixes using "typical" speakers to see how the song will
sound in a car or clock radio.

I like to tell people to look for the itsy-bitsy speakers on top of the
console in every studio picture. They are not paperweights.
>
> And high loss digital codecs such as those in use on most radio

With the cost of multi-terabyte RAID arrays, we have double reliability on
each of two servers, one backing up the other for a factor of 4... meaning
every uncompressed song is out there 4 times. And then backed up off site at
one of the transmitters. You can build a terabyte raid array today for the
cost of a single spot on these stations...

Those little black speakers in every studio on the mixer are for "real
world" and "mono" checking.

You are simply triying to discredit an industry voice of reason and logic on
the HD issue. Who cares if I use my middle name or not all of the time. Is
George Bush a different person from George W. Bush or G.W. Bush? I think
not.

Nope, because I only have one name, in 4 parts. And because an error in a
convention program does not indicate chicanery.
>
> Oh puhleeez....you really MUST do better than that if this is to remain
> entertaining. I expect an Ecuadorian refugee to have more ingenuity

Read again, Sherlock. A "refugee from Ecuador" is not an "Ecuadorian
refugee." I am the former, not the latter.

You are playing with word order now. I'm actually quite proud in retrospect
at having been a voice of opposition to the military government, which was
leftist, totalitarian and barbaric. While I lost some radio stations, I did
something that needed to be done. Challenging a dictatorship is a little
more than the word order involved in stating that I was ordered, at
gunpoint, out of Ecuador. What have you done to defend your principles?

Hello everyone,

Does anyone remember Grant James of Did You Hear? on HCJB from Quito?

I didn't realise he was still going with the radio show, but I stumbled across http://didyouhear.biz recently. I suppose this site explains why he sounds so much like Paul Harvey.

What does everyone think of his show? How does it compare with Paul Harvey's?

Henry

I have only had one name since being baptized, have changed job title with
every job and promotion, as most do, and only had one nationality which I
acquired with no effort on my own. Nice try.

Motorola has already shipped an iRadio enabled device to stores. Back all your statements with facts, but you can't. You can be beat on logic, but not on words - so, there is no reason to debate you, as most people have found out, I will simply keep posting new threads on radio-info.com, and back them with links. Motorola sold 70,000,000 cellular phones, around the world, last year. There are 600,000,000 GSM cellular phone subscribers, around the world. The Motorola Rokr E2, implementing iRadio, has already been demonstrated, and is coming soon. iRadio in-the-dash will be a serious competitor, along with Satellite Radio, to HD Radio. Most visitors to radio-info/HD, unless they are morons, will at least get a glimpse at alternative technologies to HD Radio. through my new topics, backed by links. You really are a waste of good time. If you already haven't done so, check out my new topic, on radio-info.

That's what I tried to tell them. But...'new thinking' and all that.

We had one meeting shortly after I started there, entitled, "There
Are No Experts."

Of course my first question was: Then why do we all not have corner
offices?

I got a private meeting myself that day.

>> With one guy who thought he was God's Gift, I would get an angry call
>> about once a week from the GM, who was listening on a stereo radio, but in

>
> I never had anything that silly happen, but certainly learned from the spots
> where either the bed or the vice were phase cancelled.

It was a pointless argument on my part. No one wanted to hear it.
And it's not the first time I encountered that particular abomination.
At KEEL/KMBQ, the morning guy used to do it all the time. Of course, his
wife owned an advertising agency, so, you couldn't tell him anything.

From what I hear from the guy who took my position when I left CBS,
it's still going on...it's just that the chief engineer gets the call
now, wondering when he's going to get that problem in the studio fixed.

>> The mono listening figure is closer to 2/3's than a half, and most

> listeing is in the car here in LA?" All answeres were in the 50 to 66%
> range! (LA at the time had 29% in car listening).

Actually, this is a myth that was actively propagated by Manglement.
We were told at a staff meeting that most listening was done in the car.
That's why WLS had such a short turnover of the top 10 songs. And that
we needed to be mindful of this when on the air.

He didn't last long, and went to blow up a successful station in
Houston.

He had me take two days off so I could modify the radio installation
in his car before he left.

>> Music mixers and producers spend a LOT of time insuring mono

>> big chunk of the music productions that I've worked.
>
> And they also do mixes using "typical" speakers to see how the song will
> sound in a car or clock radio.

Now, that's always been true. In fact, during the John Rook days at
WLS, the legends have it, that he personally auditioned every promo
through a set of A-7's at ear bleed level, and a set of speakers from a
transistor radio. Every studio I've ever worked in, including my own
(and I have my own A-7's, too--more because they're just bitchin cool
speakers than anything else), has multiple speaker systems for mix down
evaluation. In both stereo and mono. Mono compatibility is a very big
issue.

>
> I like to tell people to look for the itsy-bitsy speakers on top of the
> console in every studio picture. They are not paperweights.

The Auratone Cube was designed with this in mind. A great set of
small speakers is the, now out of print, Minimus 7's by Radio Shack. The
differences in mixdown output between the wall monitors and the Minimus
7's can be dramatic.

>> And high loss digital codecs such as those in use on most radio
>> stations, HD or otherwise -- usually due to a manglement edict that
>> expense will be concerved when it comes to server space....even for
>> music -- make mono compatibility even more of a concern.
>
> With the cost of multi-terabyte RAID arrays, we have double reliability on

> every uncompressed song is out there 4 times. And then backed up off site at
> one of the transmitters. You can build a terabyte raid array today for the
> cost of a single spot on these stations...

Today, that's true. I have a terabyte of storage on my PowerMac in
the office alone. But when the AudioVault went in, the max practical
server drive size was 23GB (Seagates, actually) and they were huge,
noisy and very VERY expensive. We only had six of them. Over the
engineer's, and my own, objections, it was decided for us that we will
compress commercials, promos AND music.

That's not the truth today.

Nonetheless, good audio practice requires stricter attention to
detail in the digital universe today than it did in analog universe
yesterday. And where high loss codecs, or even multiple conversions of
the digital stream -- through digital STL's and then into the Omnia or
Optimod -- exist the importance of careful mixdown, and mono
compatibility cannot be overstated.

No, they do not even have one carrier committed to the roker on its second try. Motorola does not sell to stores. It sells to carriers, who distribute via drop ship orders, to stores.

In other words, wrong on the phone, wrong on the marketing.

There is a prototype running around, though. One reporter said he thought the on screen English menus were translated from Chinese to English by a Finn. In other words, early prototype.

DE - What the "Turn-Over" Numbers may be the Key Factor
in the evolution and acceptance rates of the two competing
Technologies.

* Celfones with a shorter life and a younger average age of the
users would cause a faster migration to iRadio {Internet Radio}.
- - - The Celfone is the "Device-of-Choice" for the 'next-generation'
of Voice, Picture, Information and yes Radio CONSUMERS [.]

* AM/FM Radios as a longer life household appliance and an
older average age of the listeners would cause a slower migration
to "HD" {IBOC} Radio. The only factor that could cause a
faster Turn-Over rate for AM/FM Radios is Car/Truck Radios and
the fact that people turn-in aand buy new cars every 3-5 years.
- - - Note that many Car Companies are pushing XM abd Sirius
Satellite Radios as oposed to "HD" Radio.

IMHO - It would appear that iRadio has a marked advantage
with the 'next generation' of Radio Listeners.

and that's the way i see it ~ RHF

> cellular phones, around the world, last year.

Yes, around the world. An most of them were in the lower price ranges, where
80% or more of US phones live, and about 90% in the rest of the world.

They did not sell 70 million of any one model. Can't you get this?

They sold very few high end models. Can't you get this?

No model in the US sells, today, more than around a million or so. then they
are discontinued and updated.

> There are 600,000,000 GSM
> cellular phone subscribers, around the world.

So what? The average annual income outside the traditional induatrialized
nations is under $3000 a year. How many of these folks will be subscribing
to iRadio internationally? Answer:: none.

> The Motorola Rokr E2,
> implementing iRadio, has already been demonstrated,

With a not-fully-functional demo. With menues in "Engrish." 9 months late,
by the way.

>and is coming soon.

So is space travel for the masses.

> iRadio in-the-dash will be a serious competitor, along with Satellite
> Radio, to HD Radio.

No, it won't be unil WiMAX arrives. EVDO drops incessantly on web and
streaming connections. I have both Verizon and Sprint, and need both at $80
a month each to just have a connection accessable. Don't try to stream while
moving, though.

Satellite is 5 years old, and has not impacted terrestrial radio It represents barely a half share point in any market int he US. Sales have slwoed, and XM has revised projections, while Sirius has been caught inflating subscribers by adding in the unsold 200,000 cars on dealers lots. The churn is picking up, too, per the XM earnings call for Q2.

> Most visitors to radio-info/HD, unless they are
> morons, will at least get a glimpse at alternative technologies to HD
> Radio.

There are no alternatives. The FCC has authorized HD, and there are 1000 of the nations biggest stations on already, with another 1000 signed up for.

> through my new topics, backed by links. You really are a waste
> of good time. If you already haven't done so, check out my new topic,

Please repost your observations about once every 90 days. Well spent reading time, and I can not add a thing.

Years ago, I did syndication to Latin America, and every music tape had to be listened to on completion in mono and in stereo on small speakers to make sure there were no defects the big JBLs in the production room did not reveal.

It does with WiMAX, several years away. Google on Clearwire and see what it
offers. All the major broadcasters are on board for this.

EVDO does not cut it as it is a stopgap technology to wring the last bps out
of conventional cellular technology.

Boy Scouts, KKK, no difference. It was a donation that the scouts
didn't get, so it's not like money was stolen from the Boy Scouts. Even
then, nothing was proven as it didn't get adjudicated.

In Berkeley, the scouts are crying because they can't get a berth at
the local dock for free anymore. The Berkeley city council won't allow
organizations that discriminate to use free city services. You think

all those right wing neocons would pay the freight for the boy scouts?
Nope. So much for the free market.

Swooop. Wow. One nationality and one cultural group in one sentence.

Here's a test: build a coherent sentence (hard for you I know) in which you offend the highest number of nationalities, ehtnicities, races and cultures. Then you can simply cut and paste it into every response and it will cover everyone you hate.

Heard any more 'piratas' lately? It seems that YOU are the one with fake
Hispanic aspirations. That seems very strange, after you called the
Mexican President 'A piece of Mexican shit'.

I'm glad most citizens of the US are normal. Unfortunately, your type
ruins the image of the decent people living there.

> do.

AFRTS is really bad about this. They don't seem to understand the concepts
of either in-phase stereo or summing to mono. There are a great number of
their PSA's that are out of phase and therefor have little or no audio
(voice or bass). This holds for both radio and television, and for both
professionally produced spots and for local talent. In addition to this,
they absolutely REFUSE to run both channels of a stereo feed to their AM
stations. A complaint about this draws the response: "it's mono radio, it
doesn't have two channels, so it doesn't need two channels." Idiots.. (or
should I say ID10T's?). What engineer doesn't know the concept of summing?
Their AM stations sound like shite because half the program material is
missing. It's all satellite fed anyway, how can it be so difficult for them
to sum the two channels together through a simple dual op-amp circuit? Or,
for crying out loud, a Y adaptor out of the RCA jacks on the back of the
satellite receiver? People who don't know proper engineering should not be
running radio and/or television stations. This goes for IBOC as well as
stereo or mono analog.

That's called a typographical error. You've made your fair share of them.

This could be you, except this character obviously has a hell of a lot
more testosterone than you do.

http://redwing.hutman.net/%7Emreed/warriorshtm/grammarian.htm

But then, even cuhulin, dressed in all his women's underwear, would have
more testosterone than your type, even as he pines for bestial love.

Now, be really original and respond with: "Oh Yeah..well..THIS is YOU"
and then relist the same web page..You know you want to.

That is bad management theory.

People who run businesses should know how to identify people who, in their specialized area, know more than the manager. I do not expect many radio managers to know much except the very basics of engineering, and certainly not to know about phase cancellation and high vs low impedance outputs and different connectors. I expect managers to put the right people in every function from accounting to sales, and then to get them all to work as an organized group.

A guy in France (Nicolas Joseph Cugnot in 1769) invented a steam powered three wheel vehicle.One night he fired it up (it would only go at less than a walking speed) and the vehicle bumped into the side of a building.It had a big copper boiler up front and a sort of a ratchet cog front wheel drive system.Actually,a guy in Italy invented a spring wound vehicle,but it never went anywhere.Benz was a ''Johonny come lately''.

It can not grow much more as 200 million would be about every American over
age 16 now. Maybe there is a growth market in 7 to 12 year olds.

Cell phones are here to stay, and are upgraded constantly, and new ones
roll out all the time. How many HD radios are out there - fuck you,
old man ! Funny, thing you argued how many cell phones on radio-info,
but have accepted Brenda Ann's number, even though I posted links over
there to that effect - you talk out of both sides of your fucking ass !
And, I will be posting more and more threads on radio-info, so fuck
you, old man !

You probably renounced your US citizenship, to get that goddamn
Univision executive job at your Spanish based company - I guess it
makes it harder for you to get fired, but not once HD/IBOC tanks !

This is just another example where we see militant homosexuality trying to force people embrace their sick perverted immoral lifestyle. The Faggots were the ones that were whining, Not the Boy Scouts.

The Boy Scouts stood strong on principle and wouldn't bend over and give in to the demands of the queers.

Another way to spell Liberal: Berkeley.

Liberals will destroy America unless we stop them.

Lemme see... I had my first cellular in Puerto Rico in about 1989. That
would be 17 years ago.

HD started marketing last week. You are asking for an impossible comparison.

> old man ! Funny, thing you argued how many cell phones on radio-info,
> but have accepted Brenda Ann's number, even though I posted links over
> there to that effect - you talk out of both sides of your fucking ass !
> And, I will be posting more and more threads on radio-info, so fuck
> you, old man !

The last Census data, in the 2005-2006 extract, is 189,000,000. All that proves is that over 17 years, a lot of people have become cell phone subscribers. Something like 40%, however, are paid for by businesses and government.

- Business phones will not have added cost entertainment options.
- High end business phones have PDAs and such, not radios built in.
- The rokr is a high end phone, at over $200.
- Of the, give or take, 200 million active phones, less than 2 million are any one model.
- Most phones are entry level, either free with a contract or costing very little.
- Lower end subscribers churn at the end of each contract to get a new phone. They get cheap phones.
- Average US cellular bill for 2005 was a few cents under $51 dollars.

Univision is an American company, with less than 25% foreign ownership which
is the legal limit for broadcasters.

Where do you come up with these lies.

Univision is based in LA, in the Westwood area, not in Spain.

I never renounced my US citizenship, either, dufuss.

You can not have an iRadio device based on a phone unless some carrier sells it. No carrier has it. It is still not being produced in quantity. There appears to be resistance, based on the failure of the original rokr.

But, go ahead, be my guest. Show me an ad for a Rokr E2 at a store, and then tell me how to use it without having a cell phone subscription (even wireless EVDO cards have a cellular carrier, whether part of a phone or a computer)

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as

Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well.

Out of context? It's pretty much on target, Edweenie!

LMFAO at the dufuss who obfuscates, prances, dances and essentially tries to pull the wool over everyone's eyes.

And by the way boy, you're still a fake Hispanic.

Now prance along 'tard, and try to sell your snake oil elsewhere.

Never was, never have been. I was at one point just a short step from
becoming one, however. That did not require renouncing US Citizenship,
however. It did allow me to own broadcast licenses in my own name, rather
than through a corporation.

"Refugee from Ecuador" quite accurately describes what I went through. And
that is what I said.

The Sunspot cycle is high however, we've had some solar storms so the
band conditions aren't very good right now.

Nah, they simply kicked your ass out. And since you were not yet a citizen they had every right to do so.

So you can 'claim' to be a refugee from Ecuador all day long, since it seems to fit your 'story', but that doesn't necessarily make it factual.

Of the hundreds and hundreds where I work that have company phones, I know only one who has a second phone, and that is because she has a handicapped daughter who can only send text messages. On airplanes, i do not think I have ever seen anyone put away two phones.

I know there are some, but it is not very common.

OK, here are the steps.

1. Associate "Ecos de la Monta?a" 660 AM in Quito with "Diario El Tiempo"
2. Broadcast news and commentary prepared by El Tiempo against the junta.
3. Associate with Jaime Nebot (partner in Carrousel 660 in Guayaquil) from
the CFP party, the opposition party.
4. Receive visit from a bunch of soldiers armed with rifles whose officer
gives me 24 hours to abandon the country.
```

5. Leave 12 radio stations, home, property, etc.
6. Associate at El Tiempo was murdered instead of being removed.

Overall, I got better treatment than the citizen, who was killed.

Here is the truth about the sunspot cycle. We are now at or very near the very bottom of the sunspot cycle.

I am in NC, and I could hear music on that freq around 9 am dst, I don't recall the exact time.

I have a 52 ft vertical, and QTH at 4200 ft above sea level.

Yada, yada, yada. You can bend it, fold it and staple it ad nauseum, but
like I said, boy, they simply kicked your ass out.

And, it would seem that you still haven't learned to control your diarrhoea of
the mouth.

Now please, try to pay attention.

I'm running a homebuilt transmitter. LSB seems to work for me because
I'm not running the transmitting in stereo. I think you might need some
better filters on the AM transmitter.

The Sunspot cycle is high however, we've had some solar storms so the
band conditions aren't very good right now.

Jim wrote:

>
> Judeo Christian=oxymoron

Not at the beginning.

==========
To sum up, I said that as the Apostles and their successors went out to preach the Gospel to the Gentiles, two things happened: not only did the pagan Gentiles pour into the Church, numerically ï¿½dilutingï¿½ the Jewish membership, but more importantly, the philosophies and world-views of these vast multitudes from virtually every nation on earth inevitably changed the peculiarly Jewish theological and practical approaches to the Churchï¿½s teaching and praxis. This happened to such an extent that nowadays it needs a lot of research and discernment if one is to peel away the ï¿½Gentileï¿½ accretions over nearly 2,000 years of the Churchï¿½s history in order to discover the underlying, basic Jewishness of Christian practices, especially the heart and centre of Catholic praxis, namely the Eucharist.

http://hebrewcatholic.org/christianityfrom.html
==========

I understand they want to resume blood sacrifices in a new Temple built on the Dome of the Rock. If we can get the Vatican to do the same in Saint Peter's Basilica there would be huge lessening of the oxymoronicity.

Of course, the Mosque now on the Dome of the Rock will have to be destroyed in order to do that, despite the fact that the original Temple is thought to have been elsewhere.

http://www.contenderministries.org/prophecy/templelocation.php

The Wailing Wall seems to be in a relatively new position. also.

The boy scouts discriminate against atheists too. If you read (assuming
you can read) the article, Berkeley said no and the boy scouts sued.
The first name in a lawsuit is the plaintiff.

Again, none of the right wing loons offered to pay the berthing fee for
the boy scouts. Whine on bigots, whine on.

That may turn into a dangerous solution.. it's good that you don't
recommend it. I would think that a 'turn to turn' short is more likely
than a turn to frame short.

If there is more than one turn of the winding being shorted, the turns
ratio will be changed, altering the output. The voltage on the out side
goes up if the primary winding count is reduced and it goes down if it's
the secondary windings getting together.

I ain' wanted to listen in to that so-called "net" since they started
letting that PATHETIC OLD WINDBAG in from 9-land
check in. He monopolizes the net -far worse- than that other
windbag from Sarasota used to do Years ago by playing his
20 year old worn out Media-Monitor tapes and other monologing.
He's also managed to drive away more than half of the old time
net checkins as well. Stick a fork into it, Lib net's done and cooked
and ready to be served with potatoes and gravy.

Dawa Zeta,

The United States of America dropped the first of two huge atomic bombs on Japan today killing tens of thousands of people outright.

Would you happily and willingly allow the only country in the world that has actually used atomic weapons on civilians to disarm you and your citizens if you lived in another country?

For those of you who don't know this, or have forgotten, here are some articles that should make it clear to you that no Nation including ours should have either atomic, or the more powerful Hydrogen bombs.

Hiroshima
http://www.google.com/search?q=hiroshima+Atomic+bomb&start=0&ie=utf-8&oe=utf-8&client=firefox-a&rls=org.mozilla:en-US:official

Hydrogen bomb:
http://www.google.com/search?q=Hydrogen+bomb&start=0&ie=utf-8&oe=utf-8&client=firefox-a&rls=org.mozilla:en-US:official

Here is the home page to radio Japan. It has more news about the events going on there today.

http://www.nhk.or.jp/english/

Make Love; don't approve the slaughter of babies, children, pregnant women, old women, and other innocents!!

You need to go back and study the war before making simple minded
statements like that. The numbers of americans that would have died in
an invasion would have been huge and the dropping of the bomb stopped
the killing of americans in a war we did not start. Dropping of the
bomb probably also that far fewer japanese were killed than would have
been in a land invasion.

Those bombs as terrible as they were got the attention of the
government and forced a surrender.

Yep, and thereby won the war outright that Japan started outright, and
stop any other way.

> Would you happily and willingly allow the only country in the world
> that has actually used atomic weapons on civilians to disarm you and
> your citizens if you lived in another country?

No, that's why we must force them or nuke them.

> For those of you who don't know this, or have forgotten, here are some

Yes, we should.

> Make Love; don't approve the slaughter of babies, children, pregnant
> women, old women, and other innocents!!

But if the babies, children, pregnant women, old women, and other
innocents are allowing combatants to launch their rockets from their
neighborhood, then the babies, children, pregnant women, old women, and
other innocents become fair targets.

BTW, your math is as bad as your grasp of world affairs.

Mike

Message-ID: <1154875412.101347.192110@i3g2000cwc.googlegroups.com>
Source record: 86956

Dear "jt,"

Single-sideband (SSB) transmission is a much more efficient means of transmitting voice via radio. It works by suppressing the signal's carrier beam and one of the two sidebands. Your radio supplies the "missing" carrier by generating it itself. This method of transmssion is almost as efficient as continuous-wave (CW) (Morse Code transmission) in that long distance reception can be achieved with relatively little transmitter power. (Its big disadvantage is that it is cumbersome to tune even with the best radios. This is why it has never caught on with the mainstream broadcasters or listeners. The only broadcaster transmitting in SSB of which I am aware is AFRTS.)

While the SSB performance of the Sony ICF-SW7600GR is by no means the equal of a good communications receiver, it does perform well for a portable. (The biggest problem with it is that the IF filter is too wide for proper SSB reception.) It is probably the best SSB performer of small portable SW receivers currently available.

To try it, merely tune to 3750 kHz during the evening. Set the "AM Mode" control (on the right side of the radio) to "AM" and, using the inner button (+ ->) of the "Manual Tune/Scan Start/Stop" control, tune up until you hear something that sounds similar to "Donald Duck." Generally, but not always, this will be a frequency ending in "5." Tune up and down, if necessary, until you hear "Donald Duck" with the best signal strength.

At this point, turn the "AM Mode" control to "SSB" and "LSB/USB" control to "LSB." (Hams on the 80 meter amateur band almost always use LSB). Turn the (analog) "SSB Fine Tune" control until the voice is completely intelligible. Sit back and listen!

That's all there is to it. After a bit of investigation and experimentation, you will find other Ham bands (40 meters, 20 meters, etc.) which are used at various times of the day. Some of these Hams will use USB (generally above 10 MHz) or LSB (below 10 MHz). You can find the meter bands (frequencies) is any good reference (online or print).

Personally, I do not often listen to Hams, but you, like many, many others, may find it enjoyable and you may even decide to "join" them by becoming a Ham yourself. (The ARRL website - just "Google" < ARRL > is a wealth of information.)

I hope the above is of some interest and assistance to you.

Best,

Joe

When are you going to start posting reviews on your website? You've
had hands on experience with so many different receivers, it's be
interesting to hear your opinions about them.

Greenland on 3815 uses USB. There may be a few, rare, others as well.

Laspalmas Full Gospel Church in the Canary Islands used USB on 6715 (100 Watts)
a few years ago, but now apparently off.

And Cuba flirted with SSB on a few frequencies a few years ago.

I could go on... but I won't!

I have a Sony 7600 (older version). The problem with a clarifier is you
can't preset the radio to hear a signal that isn't present. That is,

suppose you wanted to hear HF-GCS on 11.175USB. You can plug in 11.175usb, but until they start talking, the tuning will be off.

The target market for portable shortwave radios is broadcast, not utility. For sideband broadcast, all that comes to mind is Radio Havana Cuba and AFN. I haven't listened to the RHC sideband in some time, but the 7600 should be fine for that application.

And the problem is that those who record that way do not do a mixdown and
test it using speakers like that that are intended to test in mono and on
more real world environments.

I did a jingle session two weeks ago at a studio that was mostly ProTools
but they had a complete speaker system and they did the usual mono and small
speaker stereo check. The only difference, in fact, was that the studio had
a computer monitor array and keyboards rather than a big mixer.... it had
the same dimensions, outboard effects equipment, isolated (including floor
and walls) session studio, etc.

As long as people use "ears" to listen, there will be a right and wrong way
to audition audio.

I wouldn't go that far, but I think they should make sure that everyone who gets on a plane is armed. Think about it. Who in their right mind is going to try and hijack a plane when they know everyone else is armed. And I think they should have 'open bar' too. We pay enough for a gosh darn plane ticket, at least the drinks should be free.

Happy Hiroshima Day everybody !
Here's how you can celebrate this momentous occasion!

1) Go here and print out a RADIOACTIVE PLACARD of
your choice on your color paper printer:

HERE: http://www.health.state.nd.us/AQ/RAD/samples.htm

2) If your neighbor drives a Honda, Toyota, Subaru or a Nissan
SLAP THAT SUCKER on his windshield and write the words:

"Happy Hiroshima Day - 08/06/45 - 08/06/06" on it.

Should go over real good if he's a sport. !!

Isn't IAM what God called himself in Exodus?

And today is my mother's birthday. So it is a bittersweet day. I would have much preferred a history that didn't include the USA dropping Nukes, and it all but ruins the day for me.

And one more thing.

Whose version of the war should we study? The Japanese navy had earlier suffered a terrible loss at the battle of Midway.

http://en.wikipedia.org/wiki/Battle_of_Midway

Iwo Jima was captured which would have put conventional bombers within easy reach of the Island. Japan had for all available measures lost the war and we were about to hold Japen under seige. The war was over for them. We could have sent our whole Navy there and surrounded the Island.

http://en.wikipedia.org/wiki/Battle_of_Iwo_Jima

American lives were not saved. It was Truman's accounting practices that saved American lives. He compared dropping the bombs to invading, but there was absolutly no reason to invade. Had he compared dropping the bombs to just holding Japan under seige the predicted number of American troop losses would have been real - ZERO. The lives that were saved were Japanese civilians. Japanese upper management would have held out for as long as possible and the probable result would have been starving of the general population. They were a ruthless enemy. If there exists even a glimmer of justification for the dropping of those terrible mechanisms of war it will have to be the Japanese civilan lives saved, and not the American fighting men's lives.

That's what I like best about history - We can twist it all around until it sez just what we want it to.

And to answer your question - The Good Old USA should do EVERYTHING in it's power to disarm rogue nations like iran and NK. If the ragtops get hold of a Nuke and send it over to Israel then I suspect Israel will respond in kind ten fold. Heheh. I'd be willing to bet even money those crazy Islamic towel heads aint got the right stuff to put together a viable nuke. It's probably going to go down something like this: They launch a dud nuke on Israel and Israel turns around and turns Iran into glass. I can't see Iran doing any testing to make sure they got the recipe right. These nuke explosions aren't so easy to hide. As soon as Israel hears one go off in Iran they turn Iran into

sand. Heheh.

We had been bombing Japan from afar, to no avail. But they were not
listening. Even when Hap Arnold sent the B29's in and cremated Tokyo
they did not listen and stop fighting.

How could our Navy have surrounded all of the islands of Japan...good
grief...look at a map!

It's pretty simple. Up to the day we dropped the bombs we had lost X
lives chasing the Japanese out of holes in islands and back across the

Pacific. Had we not dropped the bombs we would have lost X plus hundredes of thousands in a land invasion. To get them to stop making war they had to capitulate. Period. All they had to do was agree unconditionally to stop making war, but they chose otherwise.

I don't disagree. But there are some who say the dropping of the bomb
was from a pure revenge motive.

"Valve" is a lot more accurate to describe the function of vaccuum tubes, when you think about it. "Tube" simply describes the shape of the "container" of the item, but "valve" is exactly what a tube does-- control the amount or flow of electrons. I think it's a much more appropriate word for a basic building block of circuits than tube.

I can't agree with you more... Too many American lives were lost chasing those little turds across the Pacific, and yes air raids were being launched from Tinean, and had been for probably close to a year before we dropped the bombs. It was a stretch for the bombers in the way of distance and Iwo Jima was strategic in that we could base our fighters there instead of Japans fighters. By the time the four naval battles in the Leyte gulf were over and Iwo Jima was captured the Japanese Navy had been crushed and I think their fighters were all gone as well. They had nothing to wage a war with besides their stubbornness. The fact that we were bombing Tokyo UNMOLESTED is enough to tell me the war was as good as over. We didn't need to surround all of those little pissant little islands. Any island large enough to hold any strategic value we had already taken. There was only one island left of any importance.

Did the Japanese deserve to be bombed like that? If we count up all the atrocities they had made against USA, Russia, China and other territories then one could probably make a good arguement. A decade earlier the Jap military had raped and murdered hundreds of thousands of civilian Chinese..

http://en.wikipedia.org/wiki/Nanking_Massacre

Their treatment of Chinese civilians when Doolittle raiders (crash)landed their bombers there after Tokyo raids was of the cruelest nature. Another few hundred thousand civilians gone.

I just have a difficult time knowing that it is often the civilians who have to make the sacrifice when the guys in charge make the decisions. I can't really imagine the kind of pressure Truman was under to end the war, but I know it must have been unbearable. We cannot sit here and fault him for any decisions he made under those conditions. On the other hand, the war was over for Japan and even Hirohito knew it. He wanted to make peace way back in the spring of 42, but he was a paper tiger. I hope that Truman believed that he had saved many American lives and that they were more important than the Japanese at ground zeros. I seem to recall that Truman had said near to his death that if he had the chance to do it again he would not have dropped the bombs. Perhaps I am wrong and he slept well. I'm glad that you are happy with your flavor of history and that it rings true for you. Keep in mind there are many vendors of history and each will offer you some different flavor. As bad as things are now across the world I hope that you and I will never have to witness the destructive power of

Nukes unleashed on humanity.

Regards,
Bob

Get a cassette recorder at RShack, hook it to your HF rig's headphone
or external speaker jack, and record away.

I'm not sure what your question was, but that's one answer.

Nope. This was not payback. It was about stopping the war and the
senseless killing of american soldiers. A secondary benefit was that
it undoubtedly resulted in fewer deaths of japanese.

>

It took the 2 bombs to convince Hirohito to tell the military to stop
the war. Hirohito at best distanced himself from most of the war

making decisions.

> He
> wanted to make peace way back in the spring of 42, but he was a paper
> tiger.

Which "he" wanted to make peace...surely not the emperor. If he did
want to make peace, he said so with a very small voice. And more
importantly, he did nothing about it.

> I hope that Truman believed that he had saved many American
> lives and that they were more important than the Japanese at ground
> zeros.

We had tried everything beforehand including low level bombing of Tokyo
that set most of the city on fire. Nothing we did would stop those
people from continuing to fight.

> I seem to recall that Truman had said near to his death that if

The so-called vendors of my version of WWII fought in the pacific.
This was nothing copied from that ever-changing source of history,
wikipedia. If you had dug, bombed and burned those war mongers from
one island to another hopscotching across the pacific and knew that
they were willing to turn themselves into human bombs to hold us back,
I guarantee you that by 1945 your taste for a land invasion of Japan
would have long departed.

As bad as things are now across the world I hope

If your question was about the legality of recording SW conversations, keep the following in mind: It is legal to record whatever you receive. However, depending on what you recorded, it may not be legal to share what you heard with anyone else.

Generally, the rule of thumb is that broadcast traffic is perfectly all right to share. All ham radio traffic is legal to share. However, conversations on the air regarding ship to shore radio telephony or radiotelegraphy may not be legal to share. You can mention the nature of what you heard as long as specifics aren't included, but a recording may not be shared unless it is requested by a local authority.

For example, many years ago I heard a very troubled sailor making a confession to a priest on ship to shore radiotelephone. If I had a recording of said confession, I would not be able to share it.

Like most cool shit, there was no single inventor.

''Though the thermionic emission effect was observed as early as 1873,
it is Thomas Edison's 1883 investigation of the "Edison Effect" that
is the best known. He promptly patented it (U.S. Patent 307031), but
as the particle nature of the electron was not known until 1897, he
did not understand the process.

[edit]
Diodes and triodes
John Ambrose Fleming had worked for Edison; in 1904, as scientific
adviser to the Marconi company, he developed the "oscillation valve"
or kenotron. Later known as the diode, it allowed electric current to
flow in only one direction, enabling the rectification of alternating
current. Its operation is described in greater detail in the previous
section.

In 1906 Lee De Forest placed a bent wire serving as a screen between
the filament and plate electrode, later known as the "grid" electrode.
As the voltage applied to the grid was varied from negative to
positive, the amount of electrons flowing from the filament to the
plate would vary accordingly. Thus the grid was said to
electrostatically "control" the plate current. The resulting
three-electrode device was therefore an excellent and very sensitive
amplifier of voltages. DeForest called his invention the "Audion". In
1907, DeForest filed U.S. Patent 879532 for a three-electrode version
of the Audion for use in radio communications. The device is now known
as the triode. De Forest's device was not strictly a vacuum tube, but
clearly depended for its action on ionisation of the relatively high
levels of gas remaining after evacuation. The De Forest company in its
Audion leaflets warned against operation which might cause the vacuum
to become too hard. The first true vacuum triodes were the Pliotrons

developed by Irving Langmuir at the General Electric research laboratory (Schenectady, New York) in 1915. These were closely followed by the French 'R' Type which was in widespread use by the allied military by 1916. These two types were the first true vacuum tubes.''

my concern is expecting that I will be ahrrased on the air by other
hams on Hf after code testing ends and I get a licesnse to operate I am
concerned by able to get clear enough recordigot use with the fcc in
that evenet

given that most of the time I try to opperte 6m SSB I get jamed as it
is

Y-Man don't care too much about " the wife" lately, as he's on tour
with his leading ladies. He ain't worried about Sir Sidney or Kind
Jewis Indian or Father-And-Mother. His main concerns lately are
Cynthia and Madelyn and Janet. But maybe not in that order.

I have an old Popular Science magazine here.(I forget the exact year/month the magazine was published,somewhere around 1911.It is in one of the two cardboard boxes of old,old,old Popular Science and Popular Mechanics magazines I bought at a junk shop in Pensacola,Florida about sixteen years ago) Inside of the magazine is an article with a picture about a guy who invented a certain kind of vacuum valve/tube.He says the valve generates anti gravity.

There is a company in the Huntsville,Alabama area that has developed equipment that does generate anti gravity.You can use an electric drill and two or more little metal V/pie shaped wedges and some other simple odds and ends and build your own anti gravity device.I have either a Popular Science or Popular Mechanics magazine here which dates back to the 1960's and there is an article in the magazine that tells all about it,with pictures too.

The problem right now is that the American military is conceding that
Iraq is in a state of civil war. Iraq is a country that can only be held
together by a strong central leadership. The situation is reminiscent of
how Yugoslavia fell apart into regional in-fighting after Tito's death.

The situation in Iraq can only get worse and not better.

Hi, guys
I want to buy a shortwave radio as a gift, but I have little
knowledge. Can anybody give some recommendation of the brand (the price
should be lower than 100$.) or just some website to get familiar with
it.
Thanks

At about 10:00 PM tonight,WJTV tv news said two inmates escaped from the Hinds County detention center near Raymond.(Raymond,Mississippi is about eight miles Southwest of me) I just now took my doggy out in the front yard.She took a dump and she was looking around and stareing at something.When she got through,she ran toward my carport.Two or three cats started scrambling down off of the top of my old 1948 Jeep and knocking some cardboard boxes over.She started barking,all of the other dogs on the next street over started barking,raised quite a ruckus.

Another user posted this link earlier:

http://www.radiointel.com/review-redsunrp2100.htm

This radio sounds promising. The article also mentions which dealers sell it on Ebay. The Degen DE1103 is a good inexpensive radio too and many users swear by them, but unfortunately there are more frequent posts in Yahoo groups concerning quality control issues lately.

Good luck!

This is a like new AOR wideband scanner. These are some of the best handheld receivers ever made. It comes with the original manual, belt clip. Frequency range:0.15-2040 MHz
You wont be disappointed in this radio.

I now only take PayPal because of deadbeats.

$250 + S.H. from 55992

If they're on regular audiotape, they've probably
been transferred by now to CD or another digital
format. The shelf life of audiotapes isn't the greatest
when not under ideal circumstances.

I hate to be off topic,but some of y'all use AOL.Check out that latest article at www.drudgereport.com about AOL.The article links to www.techcrunch.com

Old saying goes, Friends Dont Let Friends Use AOL.Look,I know a guy in New England.He is retired and he has worked with every kind of computer system there is and was,it was part of his job working with those different kinds of computer operating systems for over forty years.People in his area bring their computers to him and he fixes their computers for free,that is what he likes to do.But,if someone brings a computer that has AOL,he charges them some money because AOL is so difficult to get rid of.

As the people of Cuba cry out for liberation from the cigar chewing maggot dictator Fidel Castro, Frank goes down the litany of failed, and soon-to-be-failed, Communist dictatorships and shows how their disparities in wealth are used by the ruling Party Hacks in their own Aparthied to oppress their own people.

Communism is a system of Apartheid in Cuba because Cubans must use foriegn currency to pay foriegn stores for items they purchase. This relegates the Cuban people to a second class status in their own country, because the script Castro issues is worthless outside of Cuba. It is not the benevolent Apartheid of South Africa, which was set up to preserve the race and culture of the Boervolk, but a brutal and oppressive Apartheid that exists in Communist nations.

John explores the Mel Gibson controversy, showing the double standard of how the MainStream Media gives anti-semitic statements made by African-Americans a pass while piling on the criticism and attempt to destroy the career of a White, Christian male in the public arena. Also explored are the political and cultural aspects of the issue, which have been completely ignored by the MainStream Media coverage on this event.

Also, Jose Alvarez from the anti-Castro group, Brothers to The Rescue, calls in to give a first-hand Cuban perspective on the situation in Cuba... Kennewick Man update... Bill Clinton calls in with his spin on the week's news... your phone calls and more at 718-761-9996.

Nah!!

I don't want to cause any damage, just wanted to rub-it-in
a little in an amusing way.

(I have however noted your glass etch idea above, and have filed it
for possible future use on cheap hamfest/e-bay dealer bastards, lousy
neighbors and other objectionable persons. Good idea I say too.
A step up from my old favorite method of pouring the juice contents
of a tuna fish can mixed with 2 cups of warm water down the air
intake ducts located just below the windshield wipers....grin. I did this
a few years ago to some car salesman that sold me a lemon and
gave me much grief as a result. Stank up two brand new Caddilacs
no doubt the 'lucky owners' of the same had to have the whole
air intake system taken apart to get the 'tunafish stink' out of the A/C
and Heater.....GRIN!)

He was a crazy jew that was responsible for the bombing of
the King David hotel in the late 40's that killed several dozen
British soldiers. Seems that's how you get to be PM in Israel.
You have to kill a bunch of foreigners first to climb up to the top.

I don't for one moment believe that Truman ordered the bombing as a way to speed up the peace settlements before the russians jumped in. I would believe that Stalin, Hitler or Tojo would be capable of making such a choice with little second thought.

Even if the very low estimate by some group not directly involved in the invastion of 50,000 americans were true, I would think that given what we had been through the bombings would be justified. How do you tell the parents of 50,000 young men that we sacrificed their lives just to keep the mathematical losses on both sides equal. The japanese has many opportunities to surrender but chose to continue fighting.

Our less than perfect intelligence had some experts worried that japan was far enough along in it's atomic bomb plan to have one in the near future.

965. Re: Is Hezbollah launching Iran's Armageddon?

Newsgroup: rec.radio.shortwave
Date: 2006-08-07 19:52:21 UTC

Is Hezbollah launching Iran's Armageddon?
...
President Mahmoud Ahmadinejad in Iran and the Shiite cleric Muqtada al-Sadr in Iraq are both devout believers in the "Imam" of Shia Islam. Also known as "Imam Mehdi" - hence the name of Sadr's militia, the Mehdi Army - he was the 12th grandson of the Prophet Muhammad. According to certain branches of Shia Islam, the return of the "hidden Imam" must be prepared by his followers, in a particular sequence of events. Chaos and rampant violence in the region are supposed to be among signs leading to the main battle in which the Imam will return to lead Shiites to victory.

Whether Ahmadinejad and Sadr personally believe that it is their duty to prepare the ground for the rise of the Imam, or whether they are merely exploiting religious mythology for their own political purposes, Iran and its agents in Iraq are starting to make the connection between the current conflict and the return of Imam Mehdi.

In eastern Baghdad, where Sadr's militias are based, there has been a sudden appearance of banners and writings on the walls carrying religious messages that refer specifically to Imam Mehdi. A large number can be seen near the Interior Ministry complex, home to police forces loyal to Sadr. And reports are surfacing that Sadr's militia is recruiting fighters to travel to Lebanon.

It is not coincidental that these banners appeared within 24 hours of Hezbollah's kidnapping of the Israeli soldiers. The messages on these banners, with their unstable mixture of religion and policy, are ominous, written in a tone that invokes the rise of the Imam. One reads: "By renouncing sin and by integration for the sake of afterlife, we become the best soldiers to our leader and savior, the Mehdi." Integration is one of those words Sadr often uses in reference to preparations for the afterlife.

Throughout Islamic history, rulers have used divine texts to consolidate their power. They did this either by twisting the meaning of the written texts, or by inventing thousands of alleged sayings of the prophet. In this case, it looks like the way is being paved for the "imminent" arrival of the Imam to be announced through the Mumahidoon (those who pave the way for the Imam), which is how Sadr and his followers describe themselves.

In the last quarter of a century, Iran's dreams of exporting the Islamic revolution were stopped by the once strong pan-Arab nationalism in the region. No more. Once the mullahs consolidated their power in Iran through their recent "electoral coup," in which they prohibited close to a thousand candidates from running in the last parliamentary elections and thus eliminated the reformist movement from the political scene, they were able to look outward. Now they are positioning themselves to fill the ideological

vacuum left by the demise of pan-Arabist socialist ideologies with Islamic fundamentalism.

Iran's ambitions present a danger not only to Israel, but also to the free world, whose values are fundamentally opposed to those of radical Islamic fundamentalism. It is therefore critical that the West unite behind a clear strategy to thwart Iran's ambitions.

As usual, this thread has not answered the original question.

As I stated several days ago, the Eton E1, hands down!

This isn't even a contest, the Sony 7600 series sucks on ssb for
utilities or amateur nets unless that particular frequency is totally
in the clear. (not likely) with the crowded band conditions of today.

Joe A. must be a shill for the Sony 7600 series, hell, for the price of
five of them, he could have an Eton E1 and change left over.

Ol Slick Willy, Bill Clintoon, talked Israel into pulling out of Lebanon, and he would work with the UN to disarm the Hezbollah. Israel pulled out, but Clinton didn't follow through at the UN and that's why we're watching bombs and rockets fly accross the border today. You can blame Bill Clinton and the limp wristed democrats for that.

Israel needs to take out Hezbollah, before it pulls back to its borders. Israel knows with people like Bill Clinton in the UN, the job won't get done. The only job Bill Clinton saw completed was the Job Monica lewinsky gave him.

10000uV/m at 30m is the maximum. How much power into an isotropic
radiator give 10000uV/m at 30m. Of course, when the antenna has gain,
power has to be reduced to avoid illegal operation.

Dear Mr. State,

I am not a "shill" for anyone but I do call 'em as I see 'em. I have been a shortwave listener for nearly the wrong side of fifty years now and I have seen/operated/owned quite a number of receivers, some of which were owned by friends/acquaintances, some of which I owned and still have, and others which have bitten the dust.

I do not own an Eton E1 as I feel it would serve no real purpose in my radio shack at this time, especially in view of the fact that it offers no real advantages over other radios which I already own, such as a customized AOR AR7030 Plus, a Grundig Satellit 800, and the aforementioned Sony receivers. Yes I do own five of them for particular and personal reasons - five, that is, of the ICF-SW7600GR model; don't forget the two ICF-SW7600G models and the two ICF-SW35s that I own too, though the 'G models are not in current use.

I also own five AN-LP1 antennas, an AOR WL500 antenna, and two Wellbrook ALA 330S antennas, all of which are in current use.

Quite a fair setup, I should think. At least I'm happy with all of it.

The Sony ICF-SW7600GR is positively the finest small portable shortwave receiver I have ever experienced. It is well-made, rugged, long-lasting, and offers performance that often belies its size. You and some others may disagree with me, but that is my opinion.

I think that the original question on this thread was answered adequately though I did not see anyone who owns all the radios mentioned in the original post do a complete comparison. Since the person who started the thread mentioned only radios in the small portable category and asked about SSB performance with these, I do not believe he had in mind something as large and expensive as the Eton E1. Perhaps I misinterpreted the question.

I did give my opinion of the Sony radio which I (obviously!) like very much and recommend to everyone. Others may and will disagree with me. But I know that its SSB performance is very good for a small portable radio. I personally haven't heard anything comparable in price or size that is better.

Best,

Joe

Since you don't own an Eton, I don't believe you are qualified to
answer that question.

I don't think anybody asked about your experience, how many radios and
antennas you own.

My list is much longer by the way, but I choose not to brag.

Tell us that you can't answer the question, Joe.

And quit that damn top posting, it shows your inexperience.

Harold

I have perfectly playable (if a bit noisy) 1/8" audio cassette tapes (on really shit tape, 3/$1) from 1973... those have been tossed around and moved multiple times, sat in muggy and/or moist locations, etc. for 33 years. Surely NASA used better quality tape and stored it in much better surroundings.

Mahmoud Ahmadinejad wrote:

> http://www.debka.com/headline.php?hid=3038

http://www.cdi.org/issues/bmd/Patriot.html

During the Gulf War, the Patriot was assigned to shoot down incoming Iraqi Scud or Al-Hussein Missiles launched at Israel and Saudi Arabia. The U.S. Army which was in charge of the Patriots claimed an initial success rate of 80% in Saudi Arabia and 50% in Israel. Those claims were scaled back to 70 and 40 percent. (See Frontline, WGBH Educational Foundation: "The Gulf War" and "Gulf War-A comprehensive guide to people, places and weapons" by Boyne, Walter Colonel U.S.A.F. (Ret), Signet 1991)

(Part of the reason the success rate was 30% higher in Saudi Arabia than is Israel is that in Saudi Arabia the Patriots merely had to push the incoming Scud missiles away from military targets in the desert or disable the Scud's warhead in order to avoid casualties,

while in Israel the Scuds were aimed directly at cities and civilian populations.

I like Fords best,other people prefer other brand names,and that is fine and dandy,although I do own a 1914 Ford Model T one seat car and I wouldn't get rid of it for love or money (and a 1982 Ford van and a 1986 Ford car and a bunch of other old different brand name vehicles,all made in America,except for my 1961 Hercules made in Germany moped) I wish I could afford a Watkins Johnson radio and a Duenseberg car,although I have never owned either one of those items.There are a bunch of decent portable radios on the market and on the internet stores.Take your pick.

My, my. How convenient of you to overlook the death or maiming of the sons and daughters of America.

And, sadly, it's all for naught.

Seeing as you advertise you are slow, I will type the following real slooow.

As of August 7, 2006, the O-F-F-I-C-I-A-L position of the administration is: NO WMDs. Don't quote me any web addresses or give me your -opinion-; the OFFICIAL -government- position is "NO WMDs".

The whole "yellowcake" episode has been proven, time and again, to be a fraud and a FORGERY.

NONE (as in ZERO) of the 9/11 mad dogs were from Iraq and they STILL aren't from Iraq.

Saddam did NOT support Bin Laden; Saddam was for a secular government and Osama was for a ultraconservative religious government---they were at -opposite- ends of the political spectrum.

This whole "war" is BULLSHIT and sadly, people on both sides are dying for nothing.

Just "a little more clean up"?? Well into the -FOURTH- year??

and "Everything will be OK."??

How naive of you.

Didn't you see the Congressional hearings the other day, where the big-shot Generals themselves were hemming and hawing about being in the middle of a civil war? (Gee, big surprise, right? I mean, its only been going on for a thousand years or so).

Didn't you hear Bush himself say we will be there for at least two more years?? Six years is just "a little more clean up"?

BTW, I -almost- feel sorry for the generals--they seem to be finally getting a clue as to which way things are heading, but being in fear of their masters in Washington and not wanting to put an early end to their juicy pensions, they are afraid to tell the Emperors in DC that they are wearing no clothes.

You'd think so, but I've lost tapes that I've stored
under good conditions that are much younger than
1973 (about 10 years younger).

In a hit or miss scenario, I'd err on the side of
multiple copies.

You are being a bit silly about this comparison.
Sony ICF-SW7600GR is about $150 and the Eton E1 is about $500, which is
3.3 times the cost of the Sony.

The level is the same as emissions within the CB band:

Sec. 15.227 Operation within the band 26.96-27.28 MHz.

(a) The field strength of any emission within this band shall not exceed 10,000 microvolts/meter at 3 meters. The emission limit in this paragraph is based on measurement instrumentation employing an average detector. The provisions in Sec. 15.35 for limiting peak emissions apply.

(b) The field strength of any emissions which appear outside of this band shall not exceed the general radiated emission limits in Sec. 15.209.

I don't know that there is a difference anymore between Part 95 and Part 15 emissions in the CB band... the old Part 15, back when a license was required, used to be 100mW.

The amount of power applied to an isotropic radiator which will generate 10,000 uV/m at 3 meters is 30 microwatts. This assumes that the 3 meter distance is in the far field, or that it's measured in the far field and extrapolated to 3 meters as though 3 meters were in the far field, which is the method and assumption used by the FCC.

A simple dipole reduces the permissible power to about 23 uW, and ground reflections will typically nearly double the field strength, so a safe power level would be about 6 microwatts into a dipole antenna over ground for someone interested in conforming to the regulations.

- 50% of the UD families make under $41 thousand a year.
- You figure it out.

DE,

So what Percentage of these UD Families
with Incomes under $41K per year have / own :

* Cable TV and/or Direct Satellite TV ?

* A Home Telephone plus a Celfone ?

* A Home Computer plus Internet Hook-Up ?

* A Car or Truck with a AM/FM Radio in it ?

FWIW - All of these have Fixed Monthly Costs
that far exceed $150 per year -and- All are based
on People's "Wants" not 'needs'.

Question - Will current and future AM Radio Marketing
make People WANT "HD" {IBOC} AM Radio ? ? ?

"HD" {IBOC} AM Radio needs to become a Product
that People 'feel' they Need {Want} to Listen to :
Because they 'feel' it Entertains and Informs them
better then any of their 'other' Media choices.

Because It's There ! -and- Because It's Free !
Is not Answer that makes me want to Listen ~ RHF

SC - I don't know about how Bill Clinton can be blamed for
something that is now about 6-Years into GWB's Presidency.

But - I will predict that if Joe Lieberman is not re-elected as
a Democrat Senator - Then Hillary Clinton will be forced to
become an Anti-War Democrat Candidate in 2008 and the
Democrats will once again become the Anti-War Party {Anti-
American} with the resulting big Presidential Election LOSS.

and that's the way i see it ~ RHF

1.8 to 2.0 mhz lsb in the evenings. Somewhat active.

3.7 to 4.0 mhz lsb in the evening. Very active during the evenings.

7.0 to 7.4mhz lsb during the day and evening. Very active during the mornings and day.

14.1 to 14.4 mhz usb during the day and evening. Very active.

21.0 to 21.4 mhz usb days. Not as active, but hams from around the world can be caught here.

There are other bands but they are much less frequently used.

You will hear hams identify themselves by call sign...a combination of letters and numbers. The first one or two letters will identify the country the ham is licensed in. This table will help sorting out where those singals are originating.

>
> Thanks..

Most small portables are not ideal for ssb because the controls are small and not as well designed as those found on a good table top. Most portables are designed first to catch MW, SW and FM broadcast signals and only secondarily to offer some capability with ssb signals. Consequently the fine adjustments needed to resolve ssb signals can take a little fiddling to bring in a good signal. From personal experience the DE1103 will catch a good number of signals in the 160-80-40 meter bands. The narrow filter really is a bit wide for ssb, so in one of those unusual times when the bands are crowded you will find signals crowding one another. Once the bfo wheel is set then it only needs to be tweaked for signals that are not on whole khz frequencies. Signals come in quite clearly and are easily understood.

The Sony 7600 also uses a bfo wheel, but only has one filter and I suspect it will perform similarly to the DE1103 on ssb.

You may want to read the reviews on Radiointel.com for details on both radios.

If you don't mind stepping up several hundred dollars in price for a larger portable radio the Eton E1 will probably perform close to what you could get from a decent tabletop set on ssb. It has an amazing number of features. Also look at the Grundig Satellit 800. Again, see the reviews on Radiointel for details.

My guess is that the two sets would have similar lifespans. In fact, the Sony might have a slight edge when it comes to overall build quality. As for entertaining, no doubt the E1 would be more entertaining than the 7600, but it's unclear that the E1 would be more entertaining than any other receiver in its price range--though of course "entertaining" is always in the eye of the beholder. Most people, I suspect would find a Satellit 800 just as entertaining. Some might find a Ten-Tec 320D, with its DSP and all those filters, more entertaining...and it's less expensive. To each his own...

SSB on the Drake SW8 is very impressive, though the radio (which is no
longer made) is a bit hefty and somewhat expensive ($400-600).

At some point, a family at or below the median national income will decide what is essential (like cable and a cellphone and, maybe, high speed internet) and say, "enough!"

There is a trend with the telcos and cable providers to bundle phone, TV and connectivity. Anything else,, like satellite, is an additional expense that is very easy to drop if, for example, your adjustable rate mortgage payment increases.

I understand it was a fine performer, although I never had the opportunity to spin the dial on one. Is it about the size of a 2010 or bigger?

>

They were called Lustron Homes. I've never noticed a Lustron home, but from what I can gather, they were generally similiar to the Standard gas stations. They used the same supplier for the steel panels. I think the older White Castle restaurants also have walls of enamaled steel.

One difference is the Lustron homes were supposed to have steel wall studs. The gas station I worked at used wooden studs.

The steel panels are quite durable. They're similiar to the steel panels used in ovens and washing machines.

As I mentioned, radios and TV sets worked fine inside the station. I found this from a Lustron website:

"The all-steel construction has no effect at all on radio reception or television."

http://members.tripod.com/~Strandlund/index-2.html

I suppose it's intuitive to imagine the metal would block RF by a sort of shadowing mechanism, but it works a bit differently. A better analogy would be that RF gets conducted around the shield. Unless the panels are electrically bonded to each other very well and continuously, the RF currents won't flow.

That enamaling on those steel panels would do a pretty good job of keeping them isolated. The coating on aluminum siding would do the same thing. Add some normal oxidation and the fact that the one piece of siding can't be clamped tightly to it's neighbor(to allow for expansion and contraction) and you get a very ineffective shield.

And I know that the actual mechanism isn't exactly that RF currents get conducted around the shield. But that's close enough, and that analogy puts emphasis on complete connections and low resistance conductors.

Have a Drake R8 in excellent cond. I recently replaced the top panel, bottom panel, (with metal bail), and have an unused front panel for an R8E, box and manual. This radio works perfect. $500 + shipping Conus only, US postal money order only. Will also throw in a select-a-tenna MW antenna.

If you are not used to ssb (single sideband) you can find amateurs
using am in the 40 meter band from 7290 to 7300 and in the 80 meter
band around 3880., mostly on weekends.

Yes, indeed you are correct.

Also, don't forget the Japanese already had the jet aircraft engine before
the U.S.
Had they been able to deploy them against American fighters we would have
been doomed. The aircrafts attempting to deliver the only two (2?) nukes we
had over Hiroshima and Nagasaki would have likely been shot down.

Here's another example of you saying "You figure it out.":

The following is from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as
Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to
flee Ecuador to avoid being killed. In fact, I was a matter of days away from
becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their
current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you
un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

Hey, Roy -

My 3 mW answer was for 30 meters. I think that ratios correctly to your 30 microwatts at 3 meters. Yes?

John

First, to set the record straight, this response (and most of them) are
in reply to -already existing- posts by others (in this case, Slow Code).

Finally, do you have any idea how stupid -you- look being a
hypocritical, pompous jackass of a self-elected net cop? I didn't think so.

You can build a much better widget of any type by spending over 3 times
the money on the fabrication cost. You have to compare radios that cost
about the same otherwise it is comparing apples to oranges. Most people
that have thought about it agree with this outlook. I don't go through
my radios quickly but that has not been a price consideration for me.
Generally, I have paid more money for performance and features that cost
more money to put into a radio. There are no radios that you pay more
money for just because of owner status or looks of a radio.

OK I understand now.

Well, 41k in Florida would be enough to live on but not in California
where costs are higher. Rent is a lot less in Florida for example as
housing is about a third of what it is around my location.

Whether the flyable jets that Japan had prior to war end would have become useful weapons was dependent on timing and quantity. Even if they got the jets into production in January 1945 I doubt that they would have been able to produce enough to change the outcome of the war. But yes, the japanese and germans were ahead of the allies in producing flyable jet fighters. I suspect that their value as weapons to terrorize would have far exceeded their actual destructive capability. As with the kamikaze weapons.

Japan was still a formidable enemy on the ground.

> The aircrafts attempting to deliver the only two (2?) nukes we
> had over Hiroshima and Nagasaki would have likely been shot down.

Whether they could have been successful would have depended on the Japanese being able to scramble the jets to a specific location. One reason we sent two unescorted B-29's was to disguise the true nature of the run.

Why do you post here? Is it just to debate? I try to be nice and I'm
just disabused by a new poster to the news group. Well, chances are you
are not new to the news group just one of a small handful of nut cases
that reside here with a new handle so I'll dispense with the niceties
and just declare you completely unreasonable.

Now check this out -> You can not compare radios that have a large cost
difference between them. This is not a debatable statement and you are a
fool if you think otherwise. You are obviously just Trolling for trouble.

> > I don't go through my radios quickly but that has not been a price

Yep, that's right. And I finally got curious enough to look up the actual regulation. According to section 15.225(a), intentional radiators at 13.553-13.567 MHz are allowed 15,848 uV/m at 30 meters, which is about 4.75 mW to an isotropic antenna in free space. There's also a 0.01% frequency stability requirement which would imply crystal control. And any emissions extending outside the band have to be about 54 dB lower, 30 uV/m at 30 m.

Someone over at Free Radio Network posted the following today:

"6900USB 2308-2322 SIO444 hearing this again. Data burst, then Yosemite Sam making funny noise and "take me to the Casbah". no code this time. repeated 7 times and off. Then on again after 3 mintues with same routine."

Could this be the Return of Sam?

Source record: 87288

Dear Telamon,

I absolutely agree with your assessment of some of the new people here on this group. Who are they anyway? And why do at least some of them feel the necessity to resort to vulgar language?

I suppose that if someone asked about a comparison of the Honda Civic, the Toyota Corolla, and the Nissan Sentra on a group, there would be some "clown" who would post that the Mercedes E-class is much better "hands-down!"

The original question was for a comparison of SSB performance between the Degen DE-1103 and the Sony ICF-SW7600GR (with a mention of a couple of other small SW portables). Also the original poster said he was interested in using a (potential) new receiver for MW broadcasts.

As I stated in my original post here, I do not own a Degen DE-1103. I do own the Sony ICF-SW7600GR and its performance on SSB is very good for a portable in its size and price class (that last should have gone without saying!), at least in my opinion. (And I think I forgot to mention that it is a superlative performer on MW as well.)

Last night, reception conditions were mediocre and the stations I could hear (Australia, New Zealand, the Netherlands, and a few others) had shows that were not of interest to me at that time. (I was feeling a bit out of sorts.) So I decided to try the 80-meter Ham band. On 3933 kHz (around 0420 UTC) I heard a group of Hams talking and the signal was very clear. Just for the heck of it, I turned off my AOR/Wellbrook and turned on the Sony/AN-LP1. The signal was by no means as clear or as strong as on the AOR, but it was intelligble, if not pleasant. On the AOR the signal sounded like "straight" AM; on the Sony the signal was obviously sideband. But then look at the difference in price! You're absolutely right - it is unfair to compare radios in different price classes especially in view of the obvious fact that radios in different price (and size) classes have different purposes.

I think the Sony did all right! (Unfortunately the Hams were talking about Heat Pumps, which is not one of my favorite subjects. So after my little "experiment," I turned everything off and went to bed!)

I suppose there's no real way to keep some of the "nastier" people off this group, such as H. Slate. As I'm sure you, Telamon, and many others know here I do try to answer questions where I feel that I can be of some help to someone. I've been an SWL for almost fifty years (of course that doesn't always make my answers right) and while my shortwave radio "collection" is by no means as extensive as many of the

people here, I do have a fair amount of experience using the ones I
have (and quite a few others as well). If my messages are unwanted by
the majority of "old-timers" here, well just let me know and there will
be no hard feelings.

I've been called a few names before (most notably by my wife) but this
is the first time I've been called a "shill."

Best,

Joe

So if N9OGL's transmitions are legal power wise, he would basically be
broadcasting for the kids across the street. Maybe he could take song
requests. They can just shout out their front doors what songs they want
him to play.

I can copy perhaps 8 beacons on 13.555 MHz from all across the U.S.
Assuming they too are running the power level Roy calculated, N9OGL's beacon
should also be copyable.

Not true.
I have an AM "beacon" running some test groups smack dab
in the middle of the HiFer/ISM 22M allocation. At maximum power
I am at the legal limit. Most of my tests are -20dB from that level and
I
have copied my "becaon" from over 100 miles away twice. I was -6dB
down from max, and was rather shocked. Don't rule out the odd fluke
path.

If you ever hear a YL reading a set of word pairs each followed by
a ID nubmber in cut morse, that is my odd little station.

I normally keep the power -63dB down from max legal, and only boast
it while actually conducting tests.

Why would you or anybody else want to listen to those fat, good for nothing hams for? Yeah, they are brainiacs. They can take an old TV apart and fix it. Big deal. On the radio all they talk about are their "Yogi" wires and what "Rig" they are running. Over and over. When it's a slow news day TV stations will air a few minutes on the their nightly news once a year about how Hams save the world with their stupid radios. Give me a break. We have the internet, cell phones, satellite. Those old arrogant fat hams can go jump in a lake. Take a yogi and shove it.

This is a world wide public news group where individuals are supposed to participate by posting news and information germane to the news group. As a public resource some decide to abuse it for as many reasons as there are people. Some are sociopaths or have defective personalities where the people around them have shunned them. I suppose this is another place for them to fail to be able to interact with other people under a few simple rules. If you were to meet them in person it would be for the last time as you would actively avoid them in the future.

It could be that some psychologist is using us for guinea pigs testing some theory of social interaction. Some of the posters might be on drugs or be nut cases. Some people just like to play mind games on others. Why? Maybe a form of control so they feel powerful? Who knows what is really going on with some of the posters to the news group.

> The original question was for a comparison of SSB performance between

> different purposes.

Yesterday morning conditions were poor for me receiving stations across the NA continent. The geomagnetic field was unsettled but it has been that way in the past and Australia and NZ have come in just fine.

Some antennas work better than others depending on the time of day and conditions. It is a good idea to have more than one kind of antenna around as the best angle of reception varies.

> I think the Sony did all right! (Unfortunately the Hams were talking
> about Heat Pumps, which is not one of my favorite subjects. So after
> my little "experiment," I turned everything off and went to bed!)

I find most ham conversations boring. That would change if some were my friends and I was interested in their personal details but as strangers talking about some thing that interests them is generally not interesting. When I listen to hams I care about how well I receive them and where they are located and maybe their equipment but that is about it.

> I suppose there's no real way to keep some of the "nastier" people

It's a public news group so all you can do is kill file the problem people. There are a handful of trouble makers that change their handles after a while when most people have kill filed them.

> I've been called a few names before (most notably by my wife) but
> this is the first time I've been called a "shill."

This is just some Trolling individual trying to cause trouble with you. If this happened to you in person you would get away from them and actively avoid them. Here some are under the delusion that you must read what they post or you are "controlling" them.

Of course, one big difference is that amateur radio is a two-way
form of communication, with broadcasting specifically prohibited.
So listening to it is like overhearing someone on the bus having
a conversation with a friend, which generally is uninteresting unless
you're part of the conversation.

Broadcasting is to address those listeners at home, so if they aren't
talking to that audience, they aren't doing their job.

Just as with utility listening and number stations, listening to ham
radio is often for the sake of testing one's ability to receive a weak
signal or to run up a score of something, with the contents being
secondary.

If you dont want to start out spending a lot of money for a shortwave radio,buy one of those forty something dollar Degen or Kaito shortwave radios.Test it out,see how you like it.If later on,you want a more expensive and perhaps better radio,check www.jr.com or Amazon for a Sony 7600GR radio.Check eBay too.Be sure to check out the eBay sellers ratings.

There are a few old elderly Hams in the Jackson metro area and elsewhere in Mississippi I listen to once in a while with my Radio Shack Pro-91 150 channel scanner radio.They never use profane language or insult anybody.There is no reason they would want to either because they are adults and they are Southern gentlemen.

www.rigpix.com Radio Shack/Realistic Pro-91 I bought that radio for $75.00 at the EZ Pawn pawn shop across the Pearl River in Pearl,Mississippi about eight or nine years ago.I also own an ADi AR-147 radio (rigpix.com) I bought for two dollars at the Goodwill store (six tenths of a mile South of my little doggy's couch) about two years ago.The radio looks brand new.I haven't got around to checking it out yet though.If it works ok,I wont talk on it because I dont have a license.

FWIW - Several of the RadioShack variety of
Amplified Active Shortwave Radio Antennas
have shown-up on eBay in the last few weeks.
RadioShack Catalog # 20-260
Shortwave Band Coverage 3 MHz to 30 MHz
in two ranges 3-10 MHz and 10-30 MHz.

EXAMPLE => http://cgi.ebay.com/_W0QQitemZ250016580748

Sorry here are the Completed eBay Sales Listings for the
RadioShack {Realistic} Amplified Shortwave Antennas

SOLD => http://tinyurl.com/s53st

IMHO - At these prices the MFJ 1020 Indoor Active
Shorwave Listener's (SWL) Antenna is the better
deal and offers more utility in it's set-up and use.

What you're saying makes sense, and I myself would have said the same thing at one time. Surely, you'd think that commercial radio stations, whose very survival depends on their ability to attract and retain listeners, could offer up something more interesting to listen to than your typical conversation between hams. However, at least in my opinion, they do not.

Where FM is concerned...forget about it. It's such a wasteland now that I sometimes forget it even exists. Commercial AM is better, but there's a lot of junk there, too. So many long infomercials about human growth hormone or whatever the latest variety of snake oil is, etc. I actually find that that the conversations I find by tuning around the ham bands at random are more interesting...even if it's just some guy talking about his antenna, or his house repairs, or whatever. At least it's real, and I can relate to it. Real people, real events and real

problems are just more interesting to me than the programming dreamt up or purchased by the folks at commercial broadcasters.

I actually think this was one of the initial appeals of "reality TV". The networks were producing so much garbage that someone realized they could get better programming just by turning a camera on somewhere and walking away. But of course, the temptation to improve upon "reality" is irresistible, I guess, and what now goes under the name "reality TV" is anything but real--shows like The Surreal Life and The Simple Life with Paris Hilton--these shows have zilch to do with "reality". Consequently, they stink.

Okay...I'm done!

Steve

1130. Loop Antennas / minijack works-clips don't / impedence??

Newsgroup: rec.radio.shortwave
Date: 2006-08-09 12:15:39 UTC
From: danr_18@yahoo.com
Message-ID: <1155125738.992129.203790@m73g2000cwd.googlegroups.com>
Source record: 87342

To make a long story short, I purchased a DE-31 loop for portability and it came with a 3 conductor mini-jack to "two clips" (antenna/ground) adapter. The antenna works fine with the minijack / but not the clips. I tried the clips with my Edek Torus Tuner... the clips don't seem to work with that either. The clips are making electrical contact through, though. I tried the clips with two radios (one radio doesn't have an antenna jack - hence the issue).

Important details:

The DE-31 has a 3 conductor mini-jack and the adapter ends with TWO clips, one for antenna and one for ground. The radios don't have "ground" connectors per-se, so I'm not sure the best place to connect the ground wire and if that's causing an issue.

When I connect either antenna via the minijack, I can tune the antenna just fine (I hear the "click" around the proper spot and then tune slowly) and it makes a marked improvement.

When I connect the Torus Tuner via the clip adapter, I can hear the "click" and fine tune, but it makes very little difference (on the same frequencies I tested with the minijack). Remember that the Torus Tuner has a 2 conductor plug and the adapter is 3 conductor - I don't know if that makes a difference.

When I connect the DE-31 via the clip adapter, I can't hear the "click" at all. The DE-31 has a pretty long minijacked wire to connect to the loop. When I use the clip adapter, removing the wire from the loop, gives the same reception as having the loop attached.

That is, it seems that on the DE-31 at least, when it's connected using the clip adaptor, it's using the wire as a 'longwire' antenna, but it's not interacting with the loop at the end of the longwire correctly (and reception using the wire varies by frequency). Is this an impedence mismatch? Could this have to do with not connecting the grounding wire? Any other possibilities How can this be tested (I do have a multimeter)/ corrected?

This thread has technical data regarding the insides of the DE-31 if it can be of any help.
I have not moded the unit:
http://www.drmrx.org/forum/showthread.php?t=1210

Thanks for any insights!

No one's keeping people from going over
to soc or talk newsgroups and discussing
politics there; that's what those newsgroups
are for.

Telamon is right that if you feel you have
the right to spout off about it, people also
have the right to not listen. If a user is
constantly changing e-mail addresses
to make sure that they are heard, then
people will simply go away and you're
left talking to a wall.

Sports are found just as easily on shortwave,
but you hardly ever hear it mentioned here

at even close to the frequency that you do with politics. Same thing happens with music.

Maybe I should start crossposting NFL and rugby and cricket news to compensate for the political news.

Don't be absurd. The word refers to the cross, as in ''nailed to''
(or Frank):

''ETYMOLOGY: French croisade and Spanish cruzada, both ultimately from
Latin crux, cruc-, cross. ''
http://www.bartleby.com/61/78/C0777800.html

Perhaps ''crescentade'' would be appropriate...

Why would I call to complain about a title mistake? What title mistake?
You lied about your title and they wrote it down. They didn't make any
mistake.

(My first job in radio consisted of running Sunday morning Public
Affairs, paid programming, and an MOR jock shift.)

''My job consisted of standing next to the transmitter, which was
prone to shutting down when the new host shouted louder than the Level
Devil limiter could control. I would, of course, instantly hit the
"plate on" button to return the signal to the air.''

LMAO!! The Level Devil was not supposed to be used as a peak limiter.
It was designed to drive a telco pair.

1159. Transmitting SW antenna question - pls help

Newsgroup: rec.radio.shortwave
Date: 2006-08-09 19:37:14 UTC
From: FLjeffbeach@bellsouth.net
Message-ID: <1155152234.054095.81870@b28g2000cwb.googlegroups.com>
Source record: 87171
Cross-posted to: rec.radio.shortwave,alt.radio.pirate

I am trying to find/build a simple antenna to transmit in the 20-30 MHz range. I have an HP RF signal generator with an N-type RF output connection. I purchased an antenna from RadioShack but it only goes down to 121 MHz for transmitting.

On the receiving end I have a scanner. I looked up info online for building a zip antenna for receiving (I take it the built-in antenna with my scanner, a Realistic Pro-2021, will not be adequate), but I can't find any simple info on the best way to construct a simple Tx antenna for 20-30 MHz that I can plug into my RF signal generator. Any advice?

In case you are curious as to what I'm doing, I'm using the signal generator to send out sine wave audio tones to various frequencies (as in the Spiricom experiments), and have been successful at frequencies above 121 MHz, but I don't have an antenna that goes below that frequency.

Thanks in advance for any help.

PS I was able to pick up 121+ MHz frequencies on my scanner with the built-in antenna even though I had to constantly readjust my Tx antenna to transmit at various frequencies. Why did my scanner pick up those frequencies without me having to readjust the antenna length, and will a SWR with its own antenna be sufficient for picking up any SW signals I transmit, or do I still need to build a receiving antenna?

grav

I'm not sure what the point was of the original Sam broadcasts, though
someone here might be able to shed light on it. As for this "copycat"
Sam, my guess is that he's just being a copycat, probably in the hope
of generating discussion.

That was not my title... somehow, the NAB got me a "promotion" to a position
that does not exist. In any case, there would be no benefit in a lie of that
sort, so it's a moot point.

No, it is the name of WCAA/WZAA in New York, already on with HD, and WADO
1280, another HD radio facility.

It's a lie you should never have told. It always amazes me when people
think they can lie about something like that without its ever coming
back to haunt them.

You don't need to tell me the strengths of CW. I'm a CW advocate.
Just listen to the NCDXF beacons on 14.100. You can easily hear the 100mW
tone all over the world when there is propagation with a simple antenna.
I'm just saying the RF Todd is puting into his antenna has to be quit low
if he is transmitting legal power wise.

There is only one code test? I thought there like three or four total
code tests to pass before you get that top license. And only thirty
questions? LOL. Whatever it takes to keep the poor people off the ham
bands huh? I hope you understand that is what the license is for. It's not
to promote armature radio. It's to keep people, like African Americans,
gays, poor, non tech, people off the air waves. Ham radio is a racist
bunch. They are completely dirt.

Sierra Charlie, an informative reply is not the same as a flame
response.

A tape recorder is part of my shack. By the way, there's no exam on
how to use a tape recorder. Learned it all by myself. I use it to
record Old Timers acting foolish on HF.

So I invested $20 and bought a CondoBuster. The ham radio antenna they advertise on ebay.

Well, I am very impressed. The thing comes totally assembled. You just attach your feed line and put it up. I used 300 ohm TV twin lead because it is easy to close my window using that. With coax I can't get the window all the way closed. I soldered the twin lead to the antenna. You can use coax or twin lead.

I have a little balanced feed line antenna tuner I use with it.

The antenna is for 14 to 30MHz but I found it works great all the way through the broadcast band.

It is about 35 feet long. I ran it from one corner of my house to a tree on the opposite side of the yard. So the one end is up about 8 or 9 feet and the end in the tree is up about 12 feet. It goes up very fast and easy. It is very light weight but made with strong wire.

It is kind of an unusual design. The instructions say that it is an off center feed type of dipole.

The ad on ebay says "you will be amazed"...and I was. It delivers excellent preformance. For $20 you can't beat it.

Do what??? The power output can vary depending on a number of things including coax and antenna, you can run 1,000 watts and come up 10,000 uV/meter at a distance of 30 meters. As the FCC Office of Engineering and Technology has stated in their bulletin which deals with Part 15.

"What is the relationship between "microvolts per meter" and Watts? Watts are the units used to describe the amount of power generated by a transmitter. Microvolts per meter (µV/m) are the units used to describe the strength of an electric field created by the operation of a transmitter. A particular transmitter that generates a constant level of power (Watts) can produce electric fields of different strengths (µV/m) depending on, among other things, the type of transmission line and antenna connected to it. Because it is the electric field that causes interference to authorized radio communications, and since a particular electric field strength does not directly correspond to a particular level of transmitter power, most of the Part 15 emission limits are specified in field strength."

PART 15 in the CB band is 10,000 uV/meter @ 3 meter (100 mw).(Walkie
talkies and cordless phones are also 10,000 uV/meter @3 meters) While
on 13 MHz it's 10,000 uV/meter @ 30 meters or about 1.8 watts at 100
feet.

from Omega One Radio Blog (http://n9ogl.blogspot.com/)

HAMS ACCUSE OMEGA ONE OF PIRACY!

One the USENETS (newsgroups) Amateur Radio Operators are accuse Omega One Radio of Piracy and have even gone as far as get on N9OGL BLOG http://n9oglvoice.blogspot.com and claim they have notified Riley Hollingsworth of the FCC of his "alleged" pirate activities. The truth is Omega One Radio is Legal. The power output of Omega One is 10,000 uV/ meter @ 30 meters(47 CFR Part 15.225). What's even worse is that this Ham operators are accusing someone of an illegal activity without even reading the rules and regulations. When Todd N9OGL, posted the rules those amateur's claimed "Just another cut and paste by Todd". The truth is most amateur radio operators don't know the rules, sometimes even their own rules. They believe that ALL radio transmitters and operators must be licensed by the FCC.They also believe that If you need to know about a rule or regulation that you have to be a lawyer or ask a lawyer to understand what those rules mean. This in term show how bad amateurs really are, it shows that amateurs want to play radio cop and jump the gun without reading and doing research on the matter. The fact is Omega One radio with it Part 15 power output is legal just like Wi-fi, Baby monitors, Cordless Phones, remote control toys and walkie talkies are legal because they too are Part 15.

Many stations used it as the only limiter, at the transmitter. I had a number of them, and they were adequate for modulation control as well leveling. when driven mostly into the right side of the meter, which is compression, they are, in fact, a limiter. All a peak limiter adds is clipping, and in the compression range, the Level Devil as well as the prior StaLevel worked nicely.

Did you ever actually install and use one on the air on a radio station? I did.

ABOUT - Joe Lieberman - from Wikipedia
http://en.wikipedia.org/wiki/Joe_Lieberman
http://lieberman.senate.gov/

Joe Lieberman was one of the last JFK type Democrats
who Believed in American and a Strong National Defense.

The simple fact that Al Gore, John 'ff' Kerry and all the
National Democrat Leadership FAILED to get out and
help Joe Lieberman get re-elected shows that in general
the Democrats have become the Anti-War {Anti-America}
[PEACE-NIK] Party that is willing to Sell-Out America
to the World to gain political power. The average American
who has an Abiding Faith in God and Loves Their Country
has no home in the modern Democrat Party where Howard
Dean is the head of the DNC.

I will predict that since Joe Lieberman was not re-elected as
a Democrat Senator - Then Hillary Clinton will be forced to
become an Anti-War Democrat Candidate in 2008 and the
Democrats will once again become the Anti-War Party {Anti-
American} with the resulting big Presidential Election LOSS.

and that's the way i see it ~ RHF
.

Source record: 87395

Hello,
Please forgive me to disturb you. I know that you are fond of playing golf. I would like to share with you the joy of playing golf and introduce myself to you.
I live in Guangdong province of China. Playing golf is also my favorite. I often watch the American golf match in my spare time. I almost go play golf every week.
Because of the cheap labor force and rich resources in China, 90% of the world's golf equipments are produced in China. So the products are much cheaper than those in your country. I find the value of life from playing golf. I run a golf trading company engaging in the export of the world's famous branded golf products. We mainly produce two types of golf: copy club and installed club.

Firstly, copy club means the shaft and head of the club are produced by our factory. But they are certified products. It is hard for the beginner to identify both of them. The price is 25% of the market price.Such as TaylorMade 580 (complete club set including 13 chubs) 3woods+9iron+1Putter+ TaylorMade cart bag is $490 (including carriage), TaylorMade R7 425(complete club set) is $480 ,Callaway x-18 (compete club set) is $480 ,Callaway X-TOUR (complete club set) is $480 ,Callaway big bertha (complete club set) is $480. (All prices include shipping and handling)

Secondly, assembly club is the product which is assembled with the certified shaft, head and grip which we purchase from other factories. And it is assembled by our more than 100 staffs and advanced equepments company.It is delicately assembled and packaged. So it is like the certified one in terms of material, weight and swing as well as the feeling of playing it . Even those who have played golf for more than years feel difficult to tell the difference. And the price is just 50% of the market price in in your country. Many foreigners are amazed at the products after using them. Such as TaylorMade 580 (complete club set) 3woods+9iron+1Putter+ TaylorMade cart bag is $890 (including carriage) TaylorMade R7 425(complete club set) is $880 ,Callaway x-18 (compete club set) is $880 ,Callaway X-TOUR (complete club set) is $880 ,Callaway big bertha (complete club set) is $880 . (All prices include shipping and handling)

We could provide the world-famous clubs. Please contact me by email samgolfclub#hotmail.com or MSN Messenger if you need any type of our products. I will make a good quotation to you.
It is more than promoting the products to you this time, what's more important is to make friends with you and share with you the cultural difference of golf between China and in your country well as the

potential business opportunity. I am looking forward to hearing your own opinion of golf. Best wishes.

Yours sincerely

Hello,

Can you connect both clips ? one to the antenna and one to a "ground" point ?

It does help to have the ground point...

Charly

So what?

You flagrantly violate federal laws left and right and then get in
a twist when you get your nose rubbed in it, PutzBoy!

Take your snivvelling rants to Confession on Sunday...Maybe then
you'll find someone who gives a rat's kazoo about your "allegations".

No one here believes that you're only running LEGAL anything,
Toiddie.

Idiot.

In the late 1980's a friend of mine bought one. He was a Lebanese Christian desperate for news from the area. He had a Grundig, I think it was a 650, which had great ergonomics and great sound, but was a little weak in sensitivity.

He bought one of these units and was never happy with it. It came with a coax cable and he had it up as high as the cable would allow. I lent him an Ameco PT-3, which did a much better job.

Geoff.

Since a short while I use MP3-player with a line in to record anything
I listen to.
Also when I listen in the countryside It is very usefull.

I use a Iriver T30 , but other ones with work alright.

The last recordings on my site are made with it

http://home.hetnet.nl/~hanhardonk/

good fun with recording/listening

If Drake doesn't come back into the shortwave market with an R9 or
something like that, then I suspect you'll be surprised at what used
R8Bs will sell for five or six years from now.

Steve

Dale wanted to know what frequency my "beacon" operates upon.
I was only responding. CW is best for weak signal ops, but I wanted
an AM test source for ongoing receiver experiments. Sorry if the AM
causes you any distress, but such is life.

Terry

Not much. Kenwood R-5000s which IMHO is as good as or better than an R8, sell for $250-$500 depending upon condition and options. A new in the box RB will probably sell for $3,000, but a used one will be in the $500 range, possibly less.

Shortwave is a dying hobby, there is no doubt about that. With the FCC giving the green light to BPL, and the movment of people away from radio in general, the demand will continue to drop.

Geoff.

Obviously. if you had to stand next to a transmitter to turn the
plates back on after a loud sound, they were not adequate as a peak
limiter. In fact, the 1 dB overshoot typical of that device, is
sufficient to overmodulate a transmitter well beyond the3- 5% on
frequent recurring peaks generally disregarded by FCC field engineers.

Sta-Levels (no expander, no gain freeze), Level Devils, Langevins,
Fairchilds, Collins 26-Us, were all used by me prior to the CBS Labs
era.

I even used one of these, designed for KOMA.

Message-ID: <1155216494.763095.167260@p79g2000cwp.googlegroups.com>
Source record: 87511

The question is, what can I use as a ground point? The seller said the negative battery terminal... Besides being "sloppy" (maybe put a wire around the battery door), will that do damage? Any other locations to ground it, for a portable which doesn't have a ground (or antenna) terminal?

If I don't use headphones, someone mentioned the headphone jack... Is that ok? I guess I'd have to buy a minijack... which terminal would be ground? Do I then not connect anything to the other terminal of the jack?

Interestingly, at around 15 mHz, using the antenna via the clips, does seem to work (I can tune the antenna and get sensitivity increase - I don't know if it 100% matches the jack or not - but it's pretty good).

At around 9 mHz, using the antenna via the clips only seems to see the wire and not the antenna at the end (tuning does nothing).

Does that show an impedence matching issue?

Thanks

It's just another amplified whip antenna. It will certainly catch
stations and is a good idea IF you can't string a wire antenna.

Only time will tell, I guess. I agree that BPL does not bode well for
the future. At the same time, I'm not convinced...at least not
yet...that BPL will compete successfully against the other sources of
broadband access out there. Let's hope that it doesn't.

C'mon, Todd. He qualified it by saying "4.75 mW to an isotropic antenna in free space." It is just a way to get a "feel" for how much power might be required based on the FCC uV/m limit under certain theoretical conditions.

I would start with a calculation like this if I were designing a transmitter whose signal has to meet those limits. I think that would be better than starting with a 1000W transmitter when only a few milliwatts is required.

When was the last time you used an isotropic antenna? How was your trip to free space?

You are wrong about the FCC limits on 13 MHz. There is no mention of 10,000
uV/m. Here are the limits:

Sec. 15.225 Operation within the band 13.110-14.010 MHz.

(a) The field strength of any emissions within the band 13.553-

13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.

(b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the

field strength of any emissions shall not exceed 334 microvolts/meter at

30 meters.

(c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the

field strength of any emissions shall not exceed 106 microvolts/meter at

30 meters.

You are also wrong about the power level required to achieve these limits.
The power required is much lower.

Cheers,
John

I doubt it, myself. BPL is a latecomer to the scene,
and BPL now has to compete not only with cable
and DSL but with phone and cable service (courtesy

of digital phone and movement toward digital broadcasting). That's not even counting new wireless capabilities.

Considering all that the more established competitors have, the only thing that BPL has going for it is that it is over the power lines, which pretty much every home has to have to be a modern home.

I have a DA100D, purchased in 1988. Works fine, but I couldn't tell
you if it is the greatest amplified antenna ever. (A full-size wire
antenna is definitely better.)

I have listened to the BBC for decades. It has become obvious in recent years that Left-wing Liberalism Disease has infected their reports. With the advent of the internet and its depth of information it is very easy to spot the BBC's propaganda. It is clear that the BBC uses selective reporting techniques and carefully omits key information to project a Left-wing view. This is clearly bias and manufactured propaganda similiar to techniques employed by Radio Havana Cuba.

Shortwave and the BBC is DEAD!

It does not have to. With $100,000,000 provided by Google and two other companies, Current Communications can afford to loose a lot of money before asking for more or giving up.

Geoff.

Who cares? The Jews and the Arab terrorists have been killing each
other for thousands of years. News reporting is not going to change
anything. Fuck'em. Let them kill each other off.

There appear to be two sets of part 15.225 rules floating around.
<http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=15&SECTION=225&YEAR=200
1&TYPE=TEXT>
shows:
"[Code of Federal Regulations]
[Title 47, Volume 1]
[Revised as of October 1, 2001]
>From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR15.225]

[Page 726]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 15--RADIO FREQUENCY DEVICES--Table of Contents

Subpart C--Intentional Radiators

Sec. 15.225 Operation within the band 13.553-13.567 MHz.

(a) The field strength of any emissions within this band shall not exceed 10,000 microvolts/meter at 30 meters.
(b) The field strength of any emissions appearing outside of this band shall not exceed the general radiated emission limits shown in Sec. 15.209.
(c) The frequency tolerance of the carrier signal shall be maintained within <plus-minus>0.01% of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using
a new battery."

And
<http://www.fcc.gov/Bureaus/Engineering_Technology/Documents/bulletins/oet63/oet63rev.pdf>
Also shows the 10,000uV/M at 30M

Yet <http://www.sss-mag.com/pdf/part15-91905.pdf>
Dated sept 2005, shows the limits you quoted.

What is troubling is the FCC has different specs on different documents at fcc.gov.

Buy regardless of runinng 10,000uV or 15,848uV, one does NOT need a 100W
transmitter to reach either of these levels. I have a 2W unit followed by a step attenuator
coupled to a bufffer with a Zin of 50 Ohms and a Z Out of ~500. The buffer transistor
is a 250mW and isn't even warm. This was the only easy way to allow the attenuator
to accurately step the power level down. By the 15,848uV I guess I could increase
my power from 5,000uV, to allow for the energy in the sidebands, to something like
10,000uV.

Oh whoopy gea!

Too much trouble to even think about changing as I had to back the exciter down to something like 1/2W to reach the 5,000uV level.

Crystal Oscillator-buffer#1-amplifier-?20dB pad-step attenuator-buffer#2-matching-
very poor radiator.

I would guess I am running maybe 5mW into a modified CB ground plane antenna.
Serious mismatch, but my "beacon" was only intended to reach about 1 mile.
For an S2 reading I had to back the power down ~50% from max legal. So assume I am running 2.5mW with no attenuation, so for extra credit, what is my
power level at -63dB?

Terry

Conclusive proof Qana was cynically staged... ...as "Green Helmet" directs cameramen in a video from German TV (with English subtitles). They actually take the body of a child out of the ambulance, transfer it to the type of stretcher used in the rescue operation (to create the impression that it has just arrived from the bombed area), uncover it, and pose it for photographs.

Hey Buddy,

Haven't seen you over on radio-info.com for a while - what's the
matter, is the HD board too trashed for you now - there are some new
threads, check them out ! You can thank HD Ready, IBOCRocks, and
autopaint-1 for that ! I see, you keep spreading your IOBC shit, over
here !

They (R-4245) come up on eBay from time to time. Offhand, I don't ever recall
seeing a R-77.

Here is the most recent one:

<
http://cgi.ebay.com/DRAKE-R4245-10Khz-to-30Mhz-Receiver_W0QQitemZ280000897369QQihZ018QQcat

Chuck Harder kept saying, over and over again, "President Bush doesn't get it ... he's a golden boy."
I would call that an anti-Semitic slur.
Why do I say this?
First, Bush Jr. is the most pro-Israel U.S. president since Harry Truman. Everyone knows that; Chuck Harder knows that.
Second, there is the use of the words "gold" and "boy," two traditional anti-Semitic slurs - and, in the context of Chuck's anti-Semitic rants in early 1995 ("Jewish greed," a Wall Street controlled by "Greenbergs and Sheinbergs"; The Nation, April 10, 1995, page 491) - very, very, very suspicious).
Mr. Ve3, I respect your contention that Chuck Harder is not anti-Semitic. I disagree; I think he is. To quote Dave Mason in the late 1970's, "we just disagree" on Chuck Harder's attitudes towards Jews. I suspect that if we presented our cases to a judge and jury, we would have an equal chance of swaying the verdict.

Right, mine has plastic side panels; the one for sale has wood side
panels and a different paint color, so it would be several years
earlier in vintage, probably early 80s or late 70s. Coax might be
cooked if it was outside a lot.

So buying a CB, unhooking the antenna and connecting it to the signal
generator should do the trick? Seems too simple... any catches?

Also, my scanner only goes down to 30 MHz. Since I will be transmitting the signal from my rf sig gen to the receiving target in my own house, will a simple SW radio work with its own built-in antenna?

Thanks for the input.

grav

Yes it can be ok. I did it. If your radio has a line-out jack, then you can use
it. You can also use the negative connection of the power jack if your radio got
one.

>
> Interestingly, at around 15 mHz, using the antenna via the clips, does

You must tune the antenna VERY SLOWLY ! The KA31 is very difficult to tune
sometime, and you can only see the difference on the S-meter sometime...
Using this antenna without an S-meter is quite difficult, I don't do it.

> Does that show an impedence matching issue?

Dunnow... What is your radio ? I did use it with a Sony SW100 and a Sangean ATS909.

>
> Thanks

You're most welcome...

Ever get to hear one of the numbers stations yet? They can be quite
interesting.
I caught one maybe 15 years ago that had what sounded like hungarian
music
in the background (I've a tape of it somewhere...).

Anyway, here's a website that can assist with these and other
clandestine broadcasts:

http://www.frn.net/ace/index.htm The Association of Clandestine radio
Enthusiasts.

Hiya...

Been a while since I posted here. I remember some months back there was a thread here regarding the wish list for a new high end receiver that was being planned. I think the thread was actually started by a Chinese electronic engineer that was working on the project. At any rate, I forgot what the story was. Is there a high end receiver on the way from China ??? If so, is it a portable or may be even a table top ???

Thanx in advance !!!

Michael

dxAce,

This iBiquity shill is the biggest piece-of-shit I have ever run
across - I can't believe the shit that streams from his mouth on
radio-intel.com; he really must be a sociopath. The fucking lies that
flow are really amazing; I guess, he thinks there will be enough morons
on that board, that his bullshit lies will help sell fucking fraudulent
HD Radio. iBiquity is already two years over the payout period for
investors (7 years, 5 years is typical). IF I had been stupid enough to
be an investor, I'de take that 20 minute drive over to iBiquity
headquarters in Columbia, Md. and driver my car through their front
doors ! This HD Radio shit is never going to fly - what a fucking joke
!

If you want to do a beacon, why not do one in a ham band somewhere? It would be much more valuable to the ham community than your goof-ball 13.556.

Just for fun, I did a four watt beacon on ten meters once back in the 80's. I let it run for two days, and got about six QSL card reception reports. LOL. None were DX though.

I'll try to copy a few of those beacons. Maybe there is info on about the
stations, and possible they have a waiver for an increase in power or
antenna size.

Simpler than that. You don't need a CB (radio). All you need is a CB
radio antenna. Radio Shack et al. sell them for $20-30, or you can find
them at yard sales for a quarter.

All of what you say is true but Telamon's robe isn't pearly white on the
posting of off-topic items and his "plonk" seems to be remarkably
selective at times. So selective one might say that it is
politically-based ;-).

>
> Telamon is right that if you feel you have

No argument about not having to listen. Just put the person in a
killfile and be done with it. It's his public display of the fact that
is rather interesting and attempts to convey the illusion that he is the
rec.radio.shortwave netkkkop. He isn't and never will be. If he wants
control that badly then let him start his own newsgroup and moderate it.

>
> Sports are found just as easily on shortwave,

> music.

That's the crux of the matter - he's deciding, and, by posting in
public, what he feels is relevant to this newsgroup. No one has that
control over this newsgroup. End of story. I feel that everything from
solar physics to electronics to politics to music to sports to shack
set-ups and everything in between are relevant to this newsgroup.

>
> Maybe I should start crossposting NFL and

I think that station was called the "Mad Fiddler". All the transmissions
ended with "Terminat" repeated 3 times. I have it on tape somewhere; it
was a hoot to receive.

Yep, I do read Canadian big city newspaper and have no problem when scum wipes out scum.

>
> Bad Things Happen Everywhere and some times

Good people DO NOT crack so quickly as to plan rape and murder. Good people are made of "sterner stuff". Anyone who can participate in planning rape and murder has some severe problems from the onset. Some people join the police or military for the thrill of a power kick or the thrill of having a weapon; those are individuals with problems.

No, I am just one of the employees at one of the major US broadcasters, all of whom have committed time, money, manpower and resources to putting 1000 HD staiton on the air, with another 1000 in construction as transmitter back orders are fulfilled.

>The fucking lies that
> flow are really amazing; I guess, he thinks there will be enough morons

There is nothing fraudulent about HD. It is what it is, and works as promised.

> iBiquity is already two years over the payout period for
> investors (7 years, 5 years is typical).

Huh?

XM and Sirius started woking on satellite in about 1991. Neither is anywhere close to ongoing profitablily, 15 years later.

iBiquity and most companies are not founded to sell after 7 years (typical for VC cash-outs) but as ongoing investments.

My company still has a station it put on the air in 1947! iBiquity was funded to provide a service to radio, just as the RAB was. There is also venture and investor capital, and a big stake by Intel. We are looking long range, just as the folks who started XM 15 years ago are.

> IF I had been stupid enough to
> be an investor, I'de take that 20 minute drive over to iBiquity
> headquarters in Columbia, Md. and driver my car through their front
> doors ! This HD Radio shit is never going to fly - what a fucking joke

It is flying right now, 1000 on-air stations strong, and now about a dozen other countries are adopting it, including Brazil, the second largest market int he Hemisphere.

Check out this one http://www.eham.net/reviews/detail/6038
Build 30 years ago in China and kicks a$$ of latest Palstar R30CC (yes,
including the famed Collins filters). Have both receivers and use them
side-by-side. Wouldn't be surprized that today's Chinese radios are
not far behind Western receivers. Chinese electronics industry is very
well advanced (check out where your computer or laptop was build,
including the chips that go inside). Just this week, Chinese
researchers presented the most advanced "humanoid" robot capable of
understanding 1000 different voice commands (yes, in Chinese).

DANR,

Most of the times with a 'portable' AM/FM Shortwave Radio
you are OK with 'assuming' that the Negative Battery Terminal
is Circuit Ground for the Radio and hence the RF Ground
for the Radio. - The Altenative is to check-out the Radio's
Circuit Diagram {Schematic} -or- Take the Radio 'appart'
and Eye-Ball the internal circuitry.

The Outer-Ring of the Headphone Jack can 'usually' be
used as a Circuit Ground connecting point that will function
as an RF Ground for the Radio.

Your one "Known" Antenna connection-point
{RF Signal Input} is the Radio's Whip Antrenna.

NOTE - Most Loop Antennas are considered LO-Z -and-
the Whip Antenna to Radio Ground is most likely HI-Z.

Go back to the beginning and attach a 20-30 Foot Random
Wire Antenna to the Whip Antenna and a Ground Wire to
the Negative Battery Connector -or- the Headphone Jack.
- - - If with this combination the Shortwave Radio reception
is much better - then move-on to more complicated Antenna
'connections' with your other Loop and Active Antennas.

hope this helps - iane ~ RHF

>

Your question makes no sense. What is the reference level? 1 watt, 1 mW, 5 mW, 2.5 mW?

.5 microwatts is 63 dB below a Watt.
.5 nanowatts is 63 dB below a milliwatt.
2.5 nanowatts is 63 dB below 5 milliwatts.
1.25 nanowatts is 63 dB below 2.5 milliwatts. (Is this the one you want?)

2.5 milliwatts is 3 dB below 5 milliwatts.

See a pattern in any of this?

I hope you are not transmitting on 121 MHz area. That is part of the
108 to 136 MHz aircraft band if I am not mistaken. 121.5 for instance
is an emergency frequency and it is monitored.

This chart may be helpful to avoid causing interference on sensitive
frequencies.

Every happened to Grundig shortwave radios? Did Grundig sell their shortwave department to Eton? And who or what is Eton? Is Eton a Chinese company?

I had a Grundig Yacht Boy 400 back in the mid 1990's and I loved that little radio. Unfortunately I got mad one night and busted that radio. I sure wish I had not done that. I'm thinking about buying another one off e-bay, maybe.

Anyway, what's the story on Grundig and Eton?

Grundig sold the use of their name to Lextronix for use in North
America only. Lextronix was acquired by Eton. Eton is not a Chinese company.

Grundig still exists, but neither participates in, nor acknowledges
the products of Eton.

Grunding is still recovering after a magnificent boning by Philips.

1398. [IED Warning] - 100' Shortwave Radio Antenna - Not A Toy - Used Near Iraq !

Newsgroup: rec.radio.shortwave
Date: 2006-08-11 06:58:09 UTC
From: RHF <rhf-newsgroups@pacbell.net>

This is an IED Warning - Read At Your Own Risk !

Yes siree bob 'rhf' finds another new and wonderful Antenna :
"100' Shortwave Radio Antenna NOT A TOY - USED NEAR IRAQ "

Oops - This could only be written on eBay
Another eBay 'super-market-eer' Buzz Words
his way into eBay History claiming . . .

If You Are Planning To Put Up A Shortwave Antenna
This Is The One You Want!

Greatly Increase Your Reception The Second
You Connect It To Your Radio!

All Ties and Dog Bones Are UV Stabalized
Against Sunlight and Outdoor Elements.

Mil-Spec Parts Always Used Where and When Possible,,,,

Many Sold In The Past And Ever Single Buyer
Has Had Their Socks Knocked Off!,,,,

* * * This Antenna Has Even Beed Sold To Soldiers Near Iraq
and Needless To Say, It Has Performed Flawless Since
The Installation!

Wow!!!!!!!!!!!!!!!,,,That is the best antenna
I have ever attached to my shortwave scanner.

I have been taken in by other people who claim that their
antenna will out perform all other antennas on the market,

But with the longwire antenna it took me 2 hours to go from
100k to 5000k because I picked up everything that was on the air.

Well There You Have It Folks, Finally A Real Shortwave Antenna
For THe Serious Listener!,,,

"IED" = Idiotic eBay Descriptions ~ RHF

The Grundig is still besides my bed and performs great, there is only
one flaw. sometimes the radio goes to one freq and stays there no
matter which button you pusg. Distoting the case makes the solution.It
works again. It happens every few month.

Success with finding a new grundig 400

Greeting
Han. The Netherlands

Many years ago could have been 14-15, The R8 was around for a long time.

IMHO the R8 is not as good as the R-5000 due to ergonomics. I like a radio with knobs that do things, not buttons. It's a matter of taste.

Geoff.

I hope you are not transmitting on 121 MHz area. That is part of the
108 to 136 MHz aircraft band if I am not mistaken. 121.5 for instance
is an emergency frequency and it is monitored.

You will end up in the pokey for interfering with aeroplanes,,, watch out
they will call you a terrorist

The Eton E1 is made in India! The E1 has had quailty issues since day
one. Sharper Image stopped selling them because of quailty issues. If
the flagship radio of Eton is a piece of junk, I can imagine what the
rest of their models are like.

My oh my !!!

The Lavendar Lads of RRAP and rec.radio.(fill in the blank here)
are all so upset and moaning like stuck pigs in a barnyard pen
because the TSA will no longer allow them to bring their giant-sized
tubes of K-Y Warming Gel onto the airplane. It seems that our
perverted ham radio 'butt-buddies' have been taping their air-pump
powered penis toys to their leg prior to a long airline flight and once
up in the air they were going into the restroom stall to "lube up"
before going back to their seat all happy with the squeeze-bulb
inside of their left pocket with the tray down to conceal their
perverted activities. No nore boys! One of our RRAP pervs was
at the airport yesterday and was crying the blues over having to
dump his K-Y into the trash bin under the watchfull eyes of Bubba
the 6'-2" big black TSA Officer. Bubba is no dummy either, he sent
our RRAP friend (who hails from the South) thru to the full-body
X-Ray machine and his penis-pump showed up on the scan.
Casting a shi+ eating grin he then told ----- to "GET THAT THING
OFF YOUR LEG DAMMIT! YOU AIN'T GONNA BOARD NO
PLANE WITH DAT *ISLAMIC SEX TOY* STRAPPED TO YO
LEG...!" Poor -----! He just tore up his tickets and turned around
and went home all mad and upset, when he turned the corner out
of sight, Bubba, Tyrone and Kayshee each had then a good laugh
session, slappin each other on the back and laughing to the point
of crying tears over how the Bro's of The TSA busted yet another
ham radio pervert trying to board an airline flight. Good job boys!

The End.

Baaaaaaaaaaaaaaaaaaaaaaaa HAHAHAHAHAHAHAHAHAHAHA!!!!!

I think the best thing for me to do is just drop this whole subject and
quit these blogs. I think Chuck Harder is an anti-Semite, period. Just
like Mel Gibson. I look at Mel Gibson and chuckle at his pathetic
behavior; I might draw hideous characterizations of him with snakes
coming out of his mouth (ditto Pat Buchanan); but in the end, I just
blow it off.
Chuck Harder's anti-Semitism is his problem, no one else's. It
certainly isn't mine. He'll be on the radio for another 15 years or so,
but he won't get anywhere - despite all his blather about "rebuilding."
The radio industry has concluded that Chuck Harder is too far out to be
economically viable. They won't touch him with a 1,000-foot
transmitter. Eventually he'll be off the air for one reason or another,
but it's futile to wait and count the days until that happy event. It's
gonna be a long, long time before Chuck hangs up his mike, and I'll
just have to learn to live with him - and his anti-Semitism.

> Anyway, what's the story on Grundig and Eton?

Although Grundig produced radios in the 1930's, when most of us hear the name we have visions of those large wood cased radios and later tv's that were so popular from the late 1940's through the early 1970's. Mellow sound, large controls, long analog dials festooned with city names, etc. characterized those products. Later they began producing some really pricey and good sounding luggable shortwave radios (Satellit) and a lot of smaller modestly priced units (the many Boys).

Philips gradually took a controlling interest over maybe 2 decades beginning in the mid 1970's. Grundig sales began to suffer and to me at least it seemed that they had a tough time breaking free of the analog radio model that served them so well for so long. Their digital Satellit models were not as inspired or made as well as competition from Japan. I suspect the sea-change that overtook the SWL hobby had a bigger part to play in the downfall of Grundig though. A hobby that was once popular with guys of all ages began to grey as the number of people twisting shortwave radio dials dropped in the mid 1980's and plummeted thereafter. There are very few people demanding and companies supplying new shortwave radios compared to what once was. Grundig got caught up in a combination of inattention by it's owners and a dramatic drop in demand for it's products. Philips bailed out late in the downward plunge and sold the name to yet another group. Those owners I believe sold the Grundig naming rights to Eton and limited the applicability to radios sold in the US. That deal tells me the owners were trying to wring whatever cash they could get from a failing investment. Grundig reorganized in bankruptcy and sold some of their divisions. The radio products sold in the US under the Grundig name have no association with Grundig in europe.

Grundig GMBH appears to sell a modest range of tv's, mp players, cd units, clock radios that you would find in the catalog of any other consumer electronic manufacturer. The range of units for sale may be

bigger than is found on their website. They do sell yacht boy, concert boy, city boy and other recievers with shortwave coverage. Those units look like they come from Degen/Tecsun/Redsun, etc., factories. The Grundig europe website recognizes Eton on their worldwide map but they do not provide any information on their products at all.

I don't know if I would spend too much time trying to figure out where the real Grundig radio company is located and where their products might be found. My opinion is that if there ever was a real Grundig, it was disappearing rapidly by the early 1980's. It's just a brand name pasted on a radio. Since Eton sells a variety of radios under the Eton and Grundig names let's focus less on the name and more on how the radios in question perform.

The Eton E1 to me looks like quite a radio for the money. The only issue I've seen is the lack of a ferrite rod antenna which according to some users is not a big deal.

Grundig sold out to China.I dont know about all of the Eton radios but the Eton E1 radios are made/assembled in India.I own only one Grundig radio which I believe was made by Telefunken and the radio was made in Germany.It is an AM/FM/Shortwave/Phonograph wooden cabinet floor model radio.One of the two little paper owners/operators manuals in the radio has the date 1957 so I believe the radio is about 49 or 50 years old.I also own a large Telefunken Opus 7 AM/FM/Shortwave table model wooden cabinet radio.I dont know what year it was made but I think in the late 1950's or early to mid 1960's.I bought the floor model radio at a Goodwill store for $14.00,the other radio I paid $4.00 for at a Goodwill store.

I'm going to have to rain on your parade I'm afraid. There are apparently some quality control problems that have come up for several owners of DE1103 radios sold in 2005 and 2006. Check the Yahoo board for details. I've read stories about boards not being cleaned properly leading to rapid oxidation and poor connections and ongoing problems with the optical encoder. Indeed the optical encoder on my DE1103 is acting squirrely. Turning the wheel slowly in one direction may actually tune in the opposite direction or it may rapidly jump forward many channels. That behavior tells me the encoder is dirty or loose internally. Spinning the encoder for a minute seems to buy some temporary usability, but it isn't a permanent fix.

Although I've been a big proponent of the DE1103 in the past, I'm going to have to retract that open recommendation. I would not recommend that radio unless the price were very very low and the prospective owner was willing to put up with the frustration of an unstable radio.

Sometime last year I started a thread about the RF noise from wall
warts.
<http://home.computer.net/~pritch/shortwav.htm>

Telamon and I discused the best values of the diode "bypass" capacitor.

For those inclined to do the job "right", here is a link to a very
detailed method.

<http://www.hagtech.com/pdf/snubber.pdf>

Enjoy.

Since noise limits my reception, I try to reduce it to as low a value
as I can.

It would be awesome if Grundig would return to the high-end shortwave
market and resume their Satellit line. Not likely to happen though.

I can imagine that the Chinese would not scrimp at all when it comes to building military equipment. There's no reason to think they'd give their troops in the field the same crappy receivers they sell to consumers in the West.

How would you do decryption if there is no addressable feature in the HD chipset for that, and the receiver design spec has no provision for it?

A $200,000,000 HD ad campaign started 10 days ago, based on HD offering better quality and more free channels. The whole marketing push of HD is that it is digital and has more channels and is free.

There has been no discussion amog the major broadcasters about making HD content subscriber-financed. Our entire business model is advertiser-financing.

There are near 300 HD 2 channels on the air already, and none are paid content.

Blueprint for Democrats: Deceive and Conquer

Their goal is to bring about an "orderly revolution" through which Mrs. Clinton, their Trojan Horse, will be legally elected and bring about a severe deconstruction and reconstruction of the nation. They believe that what cannot be accomplished by her hand will be enacted by the courts who began treating the Constitution as a fuzzy concept decades ago.

National polls show Bush at 35% approval and sinking. Yet to look at
soc.retirement you would think Bush was more popular than ice-cream.
But if you look closely these many accounts not only seem to post
around the same time. Most likely this is one or at most two people. He
also only talks to himself in the guise of his other accounts.
Even people I agree with I rarely respond to <- and this is a key to
reconizing these one or two phoney's pretending to be many all over
usenet!!!

In soc.retirement you have "El Castor", "Jerry Okamura", "Sordo",
"Rumplestilskin", "Jose"
"california poppy", "ruth", "bet anthony"(have I left any out?)... this
is one or two guys tops getting paid to promote Bush lies. Come on over
and get a laugh at your tax dollars at work.

(found in alt.religion.mormon, "stormin Mormon")
: Disinformer's Gambit

In the game of chess there exists a term; which describes a maneuver, a
stratagem, and a ploy; using different pieces working together, to
accomplish a secret purpose.
This is called a gambit.

Those who hope to build totalitarian control over freedom loving
people, also use many gambits. BUT, the chess player has the advantage
of always knowing which pieces are on the other side. Those who would
defend liberty have no such luxury.

The most treacherous player in the gambit is the false patriot. The
false patriot will present himself as a defender of liberty, BUT he
will spend most of his time attacking the defenders of liberty, under
numerous pretenses. The false patriot will attempt to re-direct
attention in every direction EXCEPT at those, who are building tyranny;
an entire race, a religion, a large group with a few problems, or even
against patriots.

This is essentially the very old military strategy of the creation a
"decoy to draw enemy fire." The ultimate success of this deception is
to cause defenders of liberty to "fire" on non-combatants, or even to
"fire" on their own friends, and allies. In addition, the false patriot
will
neutralize the efforts of the defenders of liberty. The false patriot,
like every other player in the gambit, will neutralize the efforts of

the defenders of liberty by:
1. Deceiving the defenders of liberty into supporting hoaxes.
2. Dividing the defenders of liberty into fighting each other by creating strife among patriots.
3. Deceiving the defenders of liberty into creating class struggle by promoting ethnic hatred.
4. Attempting to waste the time of patriots, by forcing them to respond to personal attacks, or endless debate about trivia.
5. Using multiple aliases to create the appearance that there is someone, who believes them to be credible.
6. ABOVE ALL: Accusing the most effective patriots of being false opposition. THE GOLDEN RULE OF DISINFORMERS:
Always accuse your adversary of whatever is true about yourself.

It is VERY simple. Those who spend their time fighting tyranny, are patriots.

Those who spend their time fighting patriots are working for the advancement of tyranny.

The false patriot will generally proclaim himself to be a religious zealot, but he will not adher to the principles of his proclaimed religion, in his own actions. He might even; incomprehensibly, be an ally of another player in the gambit; who is an admitted atheist, or a socialist. The false patriot; and those whom he deceives into promoting hoaxes, will reduce the credibility of all patriots. Those who have heard outlandishly ridiculous "conspiracy theories" will have a tendancy to dismiss all "conspiracy theories" without serious examination.

The admitted atheist, or socialist will supply the most fervent, and obvious, opposition to the defenders of liberty. This player, in the gambit, will make a strong frontal attack on everything that the defenders of liberty do. The admitted atheist, or socialist will implement the same goals; that are listed above The admitted atheist, or socialist will play on the
existance of outlandishly ridiculous "conspiracy theories" to encourage people to dismiss all "conspiracy theories" without serious examination. The admitted atheist, or socialist will infest patriotic, and religious, groups for no apparent reason. The main reason is to disrupt, to get the group deleted, or to waste the time of patriots.

Even though DISINFORMERS make it a practice of accusing the most effective patriots of being false opposition, you will notice that there are certain admitted government apologists, who are never accused. This is because certain admitted government apologists are also players in the gambit.

The admitted government apologist will attempt to portray the defenders of liberty as subversives, as unreliable, and as outlandishly mentally unstable. The admitted government apologist will play on the existance of outlandishly ridiculous "conspiracy theories" to encourage people to

dismiss all "conspiracy theories" without serious examination. The admitted government apologist will use documents from the FBI, or other government sources, as his authority.

Another player in the gambit, is the pretended neutral. The pretended neutral will take almost none of the above actions, but will work in the background, until a vital move is needed. The pretended neutral will occasionally vouch for the other players in the gambit. The pretended neutral may even be the moderator of a group. When the pretended
neutral is the moderator of a group, he will take no action, as long as the other players in the gambit are "holding their own". If the other players in the gambit are NOT "holding their own", THEN he will intervene; perhaps even by banning the most effective defenders of liberty.

The most effective defenders of liberty will be caught between all of these different players in the gambit. One dead "give away" is the fact that these different players in the gambit frequently are unable to conceal their support for one another; in spite of their alleged differences. The alleged religious zealot/patriot might be great friends with the admitted
atheist/socialist. The false patriot; who is always accusing the most effective patriots of being false opposition, might be great friends with the admitted government apologist.

If you will study the tactics used by the FBI COINTELPRO program. THEN you will recognize FBI COINTELPRO immediately.

Visit:

http://bcn.boulder.co.us/environment/vail/ifanagentknocks.html

Take note of the following paragraph:

"The FBI COINTELPRO program was initiated in 1956. Its purpose, as described later by FBI Director J. Edgar Hoover, was "to expose, disrupt, misdirect, discredit, or otherwise neutralize activities" of those individuals and organizations whose ideas or goals he opposed. Tactics included: falsely labeling individuals as informants; infiltrating groups with persons instructed to disrupt the group; sending anonymous or forged letters designed to promote strife between groups; initiating politically motivated IRS investigations; carrying out burglaries of offices and unlawful wiretaps; and disseminating to other government agencies and to the media unlawfully obtained derogatory information on individuals and groups."

If you understand the meaning of the tactic "to expose, disrupt, misdirect, discredit, or otherwise neutralize activities" you will understand that the person who is most likely of being a Fed, is the one who involves patriots in activities that have no effect on those who are building tyranny, and activities that will destroy the credibility of the patriots.

Those who are building tyranny would love to convince people that we are all
a bunch of paranoid nuts, so that we will we unable to warn people about the building of tyranny.

Those who are building tyranny would be more capable of convincing people that we are
paranoid nuts, if they could convince a segment of the patriots to run around telling people that the clouds, and the street signs, are out to get us, or that we should ban water.

If you understand the meaning of the tactic "infiltrating groups with persons instructed to disrupt the group; sending anonymous or forged letters designed to promote strife between groups" OR OF:
"disseminating to other government agencies and to the media unlawfully obtained derogatory information on individuals and groups." THEN you will know that a campaign of personal attacks on the real patriots is a part of the FBI COINTELPRO program.

If you understand the meaning of the tactic of falsely labeling individuals as informants THEN you will know that the person; who is most likely to be a fed, is the one who calls the real patriot a fed. It is a common tactic of FBI COINTELPRO to try to be THE FIRST ONE MAKE THE ACCUSATION. THE GOLDEN RULE OF DISINFORMERS:
Always accuse your adversary of whatever is true about yourself.

I think the one you're referring to is the Degen 1108. They had a similar one, I think it was the Degen 1106. They had it on radiointel. It had the modular MP3 player that goes into a 'slot'.

Details are still sketch on the 1108. I'm not sure if it'll even ever come out, but Degend seems to be the major player in radio development. With the exception of some of those DRM radios that are coming out..

Only in your mind. You are like dxAss who things all Canadians are retarded, with not a bit of evidence, reality or truth involved in the decision. What you (and he/it) really mean is that you disagree with my opinions, have no evidence supporting your opinions, so you both go into the ultra-invective mode to cover your cluelessness.

What do you mean? Your opinions about what?

I don't like the fact that you lie about your name, ethnicity, nationality, past personal history and professional status, and I've complained about that. Seems odd to refer to my complaints as "ultra-invective," though.

Well, I bought a Yacht Boy 400 in the early/mid 1990's. It received good/excellent reviews in the Passport to World Band Radio books I had at the time. It was a great little radio. Are the current YB 400's the same quality as the originals? Would it be safer to try to find one made before Eton took over?

I read a review on some shortwave site. It gave that radio great
reviews. Over one thousand pre-sets? Awesome. I have XM Radio. It would
be interesting to have a radio that picks up local FM/AM, shortwave, and XM.
Then again, that just may be too many channels.

Here's an interesting factoid I ran across:

87% of Hispanics in US are opposed to having Spanish language media owned by non-Hispanics.

Now my theory is that Edweenie knows that factoid and that's one of the reasons he became a fake Hispanic. After all, if 87% of Hispanics are opposed to the ownership thing then just how many would be opposed to having a non-Hispanic programming the stuff they listen too?

Something to mull over!

I don't know, Steve. When Univision bought Combined Broadcasting, I was booth at WGBO-TV here in Chicago. Univision came in and offered to pay to send me to Berlitz, across the hall from the radio station I was also working, to learn Spanish so that I could retain my position with the TV station. I'm hardly hispanic. Nor were many on staff who were offered to be retained including Programming and Promotion personnel.

I declined the offer, suggesting that they really wanted a paisano if credibility was going to be maintained, and they agreed. Although they did make some enticing counter offers. The parting was amicable, and I continued to do English language promotional pieces for them for several years. But the point is that there was no anti-Anglo sentiment in the building. Nor, in fact, have I encountered it in other Hispanic facilities. I've heard that it does exist, but I've not encountered it. Suggesting that it's not as prevalent as rumors have suggested.

But who 'owned' Univision? Certainly not Hispanics, so one would guess that there would be no animosity there.

Since I don't own any US "Hispanic Media" this is irrelevant.

And there's the point....Univision is Hispanic media. Regardless of
who owned it, there was no animosity toward Anglos. So, either Hispanic
medium owned by non Hispanics is not so much of an issue, or non
Hispanics in charge is not much of an issue. No animosity, either way.
In which case it becomes kind of a non-issue.

Don't get me wrong....there may be some hostility toward Anglos in
Hispanic media, but I'm not sure it's worth changing cultural identities

for.

At least not in the same way a colleague of mine declared himself gay
as a career move since his boss and two of his coworkers were gay. That,
actually, didn't work to well, either.

Obviously, all of us would like to see all sectors of society participating in the management and ownership of American business. I would find it strange that Hispanics not want more Hispanics to be in ownership.

But, as you say, that does not mean there are any prejudices or biases

Most large Hispanic media in the US is owned pretty much in proportion to the composition of the market. Univision is about 70% non-Hispanic owned, in fact. Telemundo is part of GE. CBS has Spanish language stations.

But where you were born is far less a factor in Hispanic media than what you can do.

You may be right. You can't tell me you're surprised. At 2:pm on
Friday, I'm lucky to find my helmet on the way to the garage.

But I think your point was that David changed cultural identities as
a career move.

I tend to doubt it, due to the limited advantage that would yield. If
he's good at what he does, the corner office really doesn't give a shit,
and the listeners would scarcely know.

But only he knows what motivates him.

Sure there was, 'tard boy! My theory as to why you became a fake Hispanic c.2000. You weren't Hispanic before that, no one I've been in contact with has any damn idea about you being 'baptized' 'Eduardo' in 1947, you didn't use the 'Eduardo' shtick when you were in Mexico or Ecuador. No, you developed the 'Eduardo' shtick c.2000...

LMFAO at the fake!

But if they did know that he was not Hispanic then that could cause some animosity amongst the
listenership knowing that an anglo was in charge of what they actually listen to rather than a
real genuine Hispanic.

Heck, I wonder if the competition might be interested? Might be a great marketing idea! "Our
programming is done by REAL Hispanics FOR real Hispanics!"

Since Hispanic is a culture, you can not just "switch" like you literally can with citizenship or marital status. However, if someone spends their life, and particularly all their adolescent and adult life, in a culture, they become part of it unless they have some reason to reject it. I constantly run into people at meetings in other markets or at other radio stations who are immensely surprised to know I was born in Ohio. They generally ask if my parents were Hispanic, and are quite shocked to know I simply "became" what I am out of ongoing and continuing exposure.

When I was PD of KTNQ and we did Spanish talk, I was frequently on the air. Nobody ever commented the less-common last name as non-Castillian last names are very common in Latin America; I doubt anyone cares that Bernardo O'Higgins was Irish. In fact, part of my family did end in Mexico, as there was a Gleason in the San Patricio Brigade (1848) and the Mexican ambassador to the UK in the 80's was a Gleason on the maternal side.

"Anglo" is an ethnicity. "Hispanic" is a culture. I know lots of "Anglo" Hispanics, and there is no contradiction as my O'Higgins example shows.

> Heck, I wonder if the competition might be interested? Might be a great
> marketing idea! "Our
> programming is done by REAL Hispanics FOR real Hispanics!"

Nobody cares. For the last 5 years, the VP of Programming at SBS (Cuban controlled) was done by a non-Spanish speaking Anglo.

From 1970 to 1995, for 33 of 35 years I had the #1 stations in Puerto Rico, and was often on TV, interviewed in the Press (Call Jaime Torres Torres of El Nuevo Dia for confirmation). WUNO, WQII, WZNT, WDOY, WPRM... all managed and programmed by me... including the first FM to play only Puerto Rican salsa 24/7, for which I got many recognitions from the local artists. I never had one comment of a negative sort, even when I spoke with people (who became friends) at the independence and socialist parties.

I doubt, in PR, anyone cared that the chairman of the Olympic Committee was named Reikehoff. Or that a current senator is Kenneth McClintock. In Ecuador when I was there, the mayor of Guayaquil was Assad Bucaram. I could go on, but the point is that ethnicity is not a factor in who is Hispanic or who is accepted by Hispanics.

David Frackelton Gleason, posing as 'Eduardo', and fake Hispanic since c.2000 tried to bluff his way out of it yet again when he wrote:

I made my first visit to sister station WFAB when I was about 13... and to Guatemala to research Tikal the next year. At 15 going on 16 I spent about 80% of the next two years in Latin America, then becoming a permanent resident of Ecuador in April of 1964...

By the way, I said "if someone" and not "I did." I spent most of the adolescent years and all my adult years either in Latin America or in a US Hispanic community.

In any case, someone who spends nearly 80% of their life in an Hispanic environment is very unlikely to be very "American" in outlook... in favorite sports, food, music, language usage, appearance of members of the opposite sex, clothing, even the preferred brand of Scotch.

National polls show Bush at 35% approval and sinking. Yet to look at soc.retirement you would think Bush was more popular than ice-cream. But if you look closely these many accounts not only seem to post around the same time. Most likely this is one or at most two people. He also only talks to himself in the guise of his other accounts. Even people I agree with I rarely respond to <- and this is a key to reconizing these one or two phoney's pretending to be many all over.

(snip BS)

Just what the heck are you talking about? most of that post makes no sence. this is a Shortwave news-group, please stay on topic. maybe this post belongs in soc.retirement.

Father Michael.

I bought the R8 when it first came out in the early 90's.

The Kenwood ergonomics is (were) better but I liked the Drake receiver
performance better. I think most people like dedicated controls for most
functions that are commonly adjusted during a listening secession.

The Drake came with all the built in filters I wanted, sync detection,
and it seemed to me to be just as sensitive. Overall, I found listening
to the Drake a better experience AM or sideband. I have very rarely
listened to FM repeaters on any SW radio. At the time I bought the R8 I
was into RTTY and weather fax transmissions and the Drake was an
excellent radio for this in conjunction with a Universal decoder. I used
a scope in XY mode on the Universal output to tune it the signals with
the smaller bandwidth filters to get a better signal to noise. It was a
good setup for RTTY and weather fax.

I traded in the R8 for an R8B a few years ago. Performance is about the
same with the exception of the improved sync detection circuitry. The
ergonomics were also improved a little going from R8 to R8B and there
were a few other improvements like more memories. I have never regretted
buying either the Drake R8 or R8B. They are the best SWL radios around.
Listening to the Drake with a good inexpensive bookshelf speaker such as
the Sonyï¿½s I have is a great listening experience. It is a great loss to
the SWL community that Drake discontinued making this radio.

Decryption would follow the detection circuitry. The encryption /
decryption would not change the current chip set in any way.
Demodulation and decryption are two different things.

The main stream could be unencrypted, the secondary encrypted, or both
streams could be encrypted. Digital is a whole new can of worms for the
listener because it gives the broadcaster control over who can listen.

< Snip >

The daytime hash level between the local AM stations has been going up.
I used to be able the hear some distant stations daytime that I can't
get anymore. If I was a AMBCB DX'er I would be pissed.

Logically, I would think along the lines you first expressed. If you
want to attract and understand an audience you must understand the
culture.

Here's an item I found to be of some interest from the latest DXLD (6-121):

** VIRGIN ISLANDS BRITISH. 4045.0 kHz usb, The Caribbean Weather
Center Ltd, British Virgin Islands, Mystic Breeze, and various
pleasure boats (just like CBers, they either don`t have callsigns or
don`t feel like giving them). 1108:32 UT (2006-06-17) (Jon-FL in
Florida, USA on ZIRC:#wunclub) (UDXF yg via DXLD)

Have to give that frequency a listen.

Fewer people would get confused by posts if dBm instead of dB were used
when transmit power level or receiver sensitivity is spoken. I know I
would.

dB being a relative measure should only be used when speaking of a
component like an attenuator or amplifier not a level of power and just
invites the possibility of confusing the reader.

There is no viable economic model for this, as it would be station based in a world where folks want to buy bundled channels of TV or satellite radio or whatever. Further, the 2.0 design spec does not contemplate this, and that is what manufacturers will be with for the introdutory phase of HD.

The real issue is that today's market is consumer driven, not manufacturing driven. Those of us who have examined consumer interests know that this must be free and an enhancement to free radio.
>

That assumes we have any interest in this. We, as an industry, do not.

Then you are impressed by absurdity. Hispanic targeted media in the US has
been non-Hispanic managed and owned since the 40's.

I have done air work on stations off and on since the 60's, and never had
the issues that dxAss mentions. He simply made this up.

Statement of fact: there is no broadcaster interest in making HD a
subscription based service. All we have to do is look at XM and Sirius to
see what happens.

> as I can.

That is a nice paper on the subject of snubbing. You get the most performance out of a few components with just a capacitor and resistor in series across a power supply switching diode. This is done for each diode in the supply. The value of the capacitor calculated to couple the peak transient power at switch off to the resistor to burn or dampen. You also have to consider the RC time constant relative to the spike duration. The capacitor and resistor form a small current loop around the diode so the switching transient does not propagate through the connecting circuitry as common or differential mode noise.

Snubbers are used for two reasons:
1. The already mentioned common mode noise reduction. For the switching power supplies I used to work on the goal here was to reduce the spike noise on the outputs and the EMI out the power cord.

2. Protect the switching diodes against the reverse voltage spike at turnoff. The spikes at switch off can easily go over the diode rating and the snubber is used to lower the spike below that rating.

Since there is a price to be paid for everything here it is power efficiency. Faster diodes are more efficient but cause larger switch off spikes that require a snubber to burn more power. Optimizing is the fun part. Everybody thinks power supply design is a piece of cake, well it is not when you try for high performance.

As I said, there are so many non-Castilian names in Latin America that it makes no difference. In Buenos Aires, among the last names of people on the air were Wong, Brinker, Medavoy, and Sofovich. The local partner was Hadad, and the Program Director was Re.

As I said, it is a culture, not an ethnicity nor a race.

You asked a technical question and I gave you the answer. Coming back
with a marketing response is a non sequitur.

Currently, the industry may not support encryption but that could change.

Technical answer: The current receiver desiggn specs do not include any
provision for decryption.
>
> Currently, the industry may not support encryption but that could change.

And pigs could fly through genetic research. At this time, there is no model
for why we would want to do this. There is a model, called XM, for why we

would not want to do this.

Connected _what_ dots?

I have never seen a survey about Hispanic media ownership with the results
dxAss mentions; I asked around our company and nobody else has, either.
There may well be a study; anyone can ask 50 people something and say they
did research. The real issue is that "wishing there was more Hispanic
ownership" does not translate into having to be or not be Hispanic to work
in Hispanic radio.

No dot here.

Since Hispanic surnames are not _just_ Castilian names, there is no
prejudice against any particular kind of name.

No dot here.

No dots _to_ connect.

Professionally, I am way beyond the point where my work is evaluated based on what my last name is or where I went to school or what I majored in. I get many more job offers from Latin America than from within the US (although I get both) and what matters is not name, appearance or heritage but the ability to get results.

A poll referred to today on CNN showed Bush up to over 45% approval because
the war on terrorism suddenly became real again.

Technical response to technical answer: Just because encryption is not being considered at the moment does not mean it will not be in the future. Adding encryption does not affect the operation of the decoding chip set as it is a different function.

This isn't about genetic pig research, it is about how digital radio affords a measure of control to the broadcasters that was firmly in the listeners hands. You can't ignore the consequences of the change to digital mode. Well, I guess you can chose too.

The issue raised is not a persons name but the culture one grew up in.
You can't deny that cultural bias exists.

> Professionally, I am way beyond the point where my work is evaluated

I don't care about your name and I'm glad to hear that you are
compensated based on your work. I care about who you are as a person
and what you do for a living. Your cultural experience far exceeds my
own.

I don't care who it was derected at

Gay bashing is gaybashing in some places it itself is a criminal
offense

It never has a place in radio Newgroup

you can indeed type what you want, I certainly can't legaly stop you
OTOH so can I

I realy fail to understand why the bulk of posts even the bulk of posts
not directed at me are about sex rather than a radio in radio NG's

Not to mention DRM to prevent you from recording anything onto your now
digital recording devices.. no more music or news archives, once they
finally do away with the last of the analog recording media (which there is
currently a big push on to do)

Which is what the RIAA, not broadcasting, is pushing. This is because, in
most of the world, 75% or better of all music sold is pirated.

I thought DRM was the HF digital system. It is, at present, neither
encrypted nor flagged. Most efforts today are to flag, which permits fair
usage (like a recording for future use) but not duplication and is
controlled at the recording device on the song level, not the program level.

> You can't deny that cultural bias exists.

Considering I spent about 45 or 46 years in Latin America or in Hispanic US communities, my cultural bias is Hispanic. I don't really know anything else... an example is that I watched Simplemente Maria but never watche Leave it to Beaver and watched Entre el Amor y el Odio but never saw an episode of Sinefield (sp?) or that I know the lyrics to half of the Willie Col&#65533;n or Ruben Blades hits, but probably could not identify a Led Leppelin song were I to hear it.

What I do for a living is run or program radio stations; I used to own some, too. I once tried to program an English station, but could only stand it for a few months. I went back to working with people I am comfortable with.

Acronyms can be annoying.

DRM
Digital Radio Mondiale
Digital Rights Management

Digital mode for SW or AMBCB is an enabling technology for encryption
and Digital Rights Management. I'm more concerned about the free flow of
information than music but anything can be copyrighted and protected.

See the June 8 Radio World which discusses flagging vs. encrypting as the
method of choice for RIAA legislation pushes.

Years ago, when cuhulin was just a young pup in rural Mississippi, his Daddy would take cuhulin along when he went to town each month to pick up supplies. Finally, cuhulin got old enough that his Dadddy let him drive the pickup truck to town by himself. The first thing cuhulin did after he picked up the supplies was to go to the one bar in town and buy some soda pop. It made him feel real grown up to be sitting there at that bar.

A month later, cuhulin was back in town by himself for more supplies, and he visited the bar a second time. While he was there, a really gorgeous girl came in and sat down next to him. Before he could work up the courage to start a conversation, another good looking girl came in and sat down next to the first one. After a while, they both left the bar holding hands.

Young cuhulin was puzzled by that, and the bartender quickly tried to make cuhulin feel better by saying "Don't worry, young man, those girls are lesbians. You never would have gotten anywhere with them."

"What's a lesbian?" cuhulin asked. The bartender replied, "Well they want to hold hands with girls, they want to get in bed and sleep next to naked girls, and all they do is think about girls day and night."

"Understand?"

Cuhulin said that he did.

A month later, cuhulin was making his monthly trip into town for supplies, and he stopped in the bar again. That time, there was a loud mouthed guy in a Panama suit seated at the bar. He noisily announced "I'm a salesman, and I get to travel all over the country making people happy by selling them new things that they can't find anywhere else. I'm really glad that I'm a salesman."

He turned to cuhulin and asked "What are you, young man?"

Cuhulin blushed a little, looked at his feet and said, "I'm a lesbian."

Hi Terry,
Pete KE9OA first brought this to my attention while I was building one of
his HF Receiver designs- very worthwhile- especially for my remote mountain
location where manmade noise is at a minimum.

Its good to see the level of support in this group.

Not sure about the DE-1103's problems but I can assure you all this
radio has been the best under $100. radios I have purchased. I got this
receiver new around 2 years ago and it has worked excellent since, it
has been my bed side receiver and it has served me well on an almost
nightly basis. As a ham, I also know many ham operators that swear by
this little radio.

eHam.net reviews like most other reviews tells it like it is, "a great
little radio".

I think anyone trying to "rain on someone's parade" or discredit
someone's sale perhaps have deeper issues?

Source record: 87667

Hi!

Something I've never seen anybody referring to is the striking
similarity between a Sony ICF2010 and a Grundig Satellit 700. Inside
that is. I personally own samples of both radios and also have the
schematics of both radios.

The Satellit 700 is more or less an upgraded ICF2010 (ICF2001D).
The synthesizer is using the same chips in a similar configuration
(Sony CX7961 and NEC uPC1037 chips two of both). The AM/FM-IF chip is
the same (Sanyo LA1205) as is the synchronous demodulator (Sony CX857).

The major differences of a SAT700 compared to ICF2010 are the inclusion
of RDS on FM and the use of switched varactor tuned filters on SW.
Otherwise the receivers look almost identical to an engineers eye.

It seems it would have been very unlikely for Grundig to be able to
source the Sony chips without a mutual agreement on the design ie.
Grundig must have bought the basic design from Sony! In the 60's and
70's the japanese very accused of ripping european and US designs.
Later on it seems that the roles did change a bit!

Coming back to changes on the original design Grundig did produce
a few bugs. The first one is quite often referred to as rumbling
synchronous AM. The main reason for this is that Grundig did mess
with the time base of the SAM-PLL. In SAT700 the LP-filter has a
56k resistor and a total of 11nF capasitance. In the ICF2010 the
same components are 10k and 11nF. Correcting the Grundig circuit
to comply with the Sony original does away with most of the rumble.
At it's easiest you just replace the 10nF of "CC817" with a 1nF capasitor.

The second bug is rather serious as well. The varactor tuned SW-
frontend filters are switched with PIN-diodes. In the Grundig
design the diodes of the filter in use have low forward bias.
The diodes of the remaining filters have their cathodes and anodes
at the same voltage ie. they have zero bias. For best intermodulation
performance one would reverse bias the non-conducting diodes. In my set
I reverse biased the diodes and the improvement in large signal handling
was remarkable.

What you need to do is to disconnect the resistors CR228,233,238,239,
245 and 246 from +AM+5V rail and connect them somewhere higher. In my
set I used the +30V tuning voltage generator and by a high impedance
voltage divisor produced +10V that I connected the resistors in to.
This resulted in a few volts of reverse bias for the diodes.
(Actually in the easiest implementation you remove the aforementioned

resistors and add new ones on vias on the PCB near the connector of the cable going to the CPU-board...)

Yeah, those first three or four years are really important culturally. By age 13 or so, I was listening exclusively to Latin music, had a tape deck that recorded XEB or HJED every night, and actually listened to the Bay of Pigs invasion live on Radio Americas in Spanish. So, between age 7 (first grade) and 13 or so, I was in Cleveland culture. From 62 on. I was in Latin culture... meaning the last 45 years, roughly. Which culture do you think I belong to?

None of my 4 daughters speak English to me, and I have never even dated an
English speaking girl. Which culture do you think I belong to?

Truth is for chumps.

''Common dictionary definitions of truth mention some form of accord
with fact or reality. There is, however, no single definition of truth
about which scholars agree, and numerous theories of truth continue to
be widely debated. Differing opinions exist on such questions as what
constitutes truth, how to define and identify truth, what roles do
revealed and acquired knowledge play, and whether truth is subjective,
relative, objective, or absolute.''

Not a very deep subject...the $50.00 radio either works or it doesn't.
Not sure what "issues" deep or otherwise you are referring to.
Possibly you could elaborate.

For an unusual number (but certainly not all) users the DE1103 radio
exhibits symptoms of not being manufactured in the ultra clean
environment that modern electronics require. I've owned Sony, Kenwood
and Panasonic receivers over the years and never experienced or heard
of qc problems like this.

I would expect that there would be a lot more similarities before one could say with a straight face the Satellit 700 is an upgraded 2010. Indeed given the quality problems of the radio I would say it was a large step in the other direction.

I suspect that Sony like any other electronics manufacturer is more than willing to sell components at a price. It takes much more than components to make a good shortwave radio. It takes attention to design, details and scrupulous assembly techniques. Grundig fell down in those categories. Sony on the other hand set the benchmark for a quality product.

I could not imagine anyone spending the hundreds of dollars the 700
sold for when new only to have to fix this many serious problems. I
would send that radio back for a full refund. That lack of quality in
a radio at this price level is inexcusable.

I have a DE1103 and it is the best performance/cost radio I've ever seen.
I used to tout it in this group also, because at that time it seemed like QC
issues had been resolved. There was about a year and a half of nothing
but good ones produced.

I won't recommend it today due to the complaints issued by unhappy users
in the Yahoo de1103 group. It would be like rolling dice now. And because
of the problems with the latest 1103s I'm not going to purchase any new
models (if they're ever produced)... 1108, 1104... unless I see a whole bunch
of satisfied customers in this newsgroup and relevent Yahoo groups.

Indeed. Todd has stolen the name from Omega One, LLC, whose site can be
found at http://www.omegaone.com. I'm sure that they won't appreciate
Todd coming along and "appropriating" their registered trademark after
they have been in business as Omega One for nine years.

Maybe I'll drop them a line at info@omegaone.com and suggest that they
have their lawyers write a cease and desist letter to Todd.

That would probably make Todd soil his pants (again).

^^^^^^^^^^^^^^^^^^^^^^^^^^^^
And you would go to such a measure to expose the likes of Todd? I mental
child? Why? What would it gain you?
You cannot give Todd cause to cease and desist much like you cannot give
Mork reason to cease and desist. Meld two mental incompetents into the same
folder and you get mental deficiencies times two.
Mork and Todd are but two peas in the same pod and no amount of cajoling
will ever cause either to learn the meaning of Common Sense.

Thank you for the info on Omega One. I will look into it, check the veracity
of your statement, and if necessary, file a complaint.
No matter how it works out, I will not waste any time trying to listen to
Todd's out-of-band transmissions. The guy is long renowned for being less
than intelligent.

I thought the more serious SWL types might enjoy a better way to
de-noise
power supplies. In my case the local noise floor sets the limit to my
receptiion.
Anything I can do to lower that noise allows me to receive weaker
signals.

I posted this link several months ago and you might have missed it:
<www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf >

And Hosfelt electronics has some very nice 2 stage EMI filters that can
be
imroved greatly by a 1000pF across the line on the load side.
<http://www.hosfelt.com/>
look under filters for:
"Mfg - CURTIS
Mfg.# - F1600CA03
3" x 2" 1-1/2"

3 amp @ 115 VAC, 50/60 Hz
IEC 3 prong input, quick-connect output"
The price is right at $0.35 each. Curtis has the specs on line but I
don't have that URL handy.

Terry

Interesting if true, but...

* This was discovered by the BRITISH authorities, NOT the Americans

* They were ALL from Britain and/or Pakistan, NOT Iraq

So then what the hell did bush have to do with any of that?

Sadly, it's due to the ignorance and gullibility of the American
sheeple. :-(

I did some checking and found the program to air again, at least on their internet stream (and I would assume on their SW service, depending on stream as the schedule corresponds to when heard here beginning at 1130) at:

1830 today
0430, 0630, 1040 and 1530 on Sunday.

In the Delta plain area where I was (first at Shannon Wright Compound near Vinh Long for about three months,then at Tan Son Nhut near Saigon) the weather is always very hot and muggy and humid every day and night,never a breeze blowing at all.It is like living in a steam kettle,always sweating.Take a shower and soon as I turned the water off,I was sweating all over again.It is a miserable climate over there.I guarantee you you wouldn't want to live over there.Why oh why didn't Uncle Sam send me to Germany? In Wartime,I always wanted to be in Western Europe.Battle of the Bulge,that sort of stuff.

.. Y-Man to proclaim that the Great Liberty Net, the greatest event in SHORTWAVE , is coming your way on (or near) 3950LSB.

But we have just learnd that Y-Man is in mourning.

A treasured member of his kommie-krat whoredom .. I mean harem .. is on the ropes.

That's right, friends and neighbors - his main squeeze Cindy McKinney caught a wax job this past week in the Jaw-Juh primary election.

Early on it looked like a conspiracy by the white folks to get her as a racial issue. Later we learned that there aren't any white voters in her district. Looks like the voters just don't like her.

Y'all keep Cindy and Y-Man in your thoughts as they go through this difficult time together.

First off that person, NO9GL is not me and it is not even a vaild amateur radio callsign. Omega One, which your refering to is a PDA software maker. to be in violation of Copyright/tradmark violation I would have to be using the mark to confuse the customer. Omega One Radio is a Shortwave broadcast station, NOT a PDA software make, So there is No confusion of the two. Where did you study Copyright/Tradmark Law?? I would REALLY suggest you read copyright/trademark Law before you go around spouting your mouth. As for being less intelligent, the only one who less intelligent here is you and your lack of understanding of Law

Very funny. You are typical of a group of DXers who are trying to cover
their eyes so they do not see that there is a change that will affect
DXing... 1000 on air HD stations in the US, Brazil, Philippines and several
others adopting HD, Mexico now in approval process, over 1000 more stations
committed to HD in the US (and awaiting equipment, which is backlogged).

This change has already happened. You may not like the technology, but it is
here and has been adopted by the 2000+ stations that represent over 80% of
all radio listening in the US.

Oh, almost forgot to mention this:

To those who still think bush is doing such a good job by being
concerned about airline safety...

bush -Reduced- (that's *REDUCED* !) the budget for airport bomb
detection by six million bucks!

For that great concern that he showed, his poll ratings went up???? Good
job, sheeple.

Doesn't matter that much to me - I can DX to Toronto, Quebec, and
Montreal to get any simulcast shows ! Canada has no plans to go
digital, they have even filed a protest with the FCC. And remember,
stations can broadcast call they want, but no one will be listening !

Industry Canada has encouraged the migration from AM to FM, with several hundred stations closing AM operations there in the last decade or so after receiving an FM license. Only large cities are targeted for continued AM service, with most AMs filling niche or ethnic programming opportunities. Even the CBC turned in 1-A AM allocations in Toronto and Montreal as well as many lathers) in favor of moving to FM.

Canada will have no AMs to protect.

As to listening, very few in the sales demos are listening to AM in the US: that is why HD is so important.

Canada has also made a ragingly unsuccessful attempt to launch Eureka.

They probably will, eventually.

In the meantime, who cares? Very little Am listening is done at night, so
just adding HD daytime is a very big advance.

THe real truth in these past two failures of incumbants' re-election attempts is that documented in the latest Pew polls....
In short, Americans are tired of being suboptimized or ignored by their elected officails...and they are smart enough to understand that the President is only executive, and not legislative in duties and responsibilities. The Pew Poll shows that only 24% will re-elect incumbants while the rest of American voters are voting out the incumbants...why??? Globalization, the loss of retirement, medical benefits at work, the dumbing-up of American youth by going for legal or business schooling rather than hard sciences and engineering, lack of R&D at the corporate level, the decline of Social Security, and the lack of respect for America abroad not due to Iraq but half-hearted liberal minded leadership. As I work and live overseas, a young Lebanese businessman said that America was the only hope for the world's peace efforts. But that we lacked the wisdom to see that democracy is not for everyone. Arabs, he said, were responsible for the endless fighting over nothing but an ignorant hatred for Jews, the West and anything non-Muslim. But we were guilty of indeciveness, and this new mission to police or free the world from totalitarianism.....in fact we are far different from the rest of the world, but are single-minded leaders who dine with kings and such are blind to the true nature of the Middle East's true woe.....Islam.

In short, I enjoy full medical, dental, education benefits where I work in the Middle East; and full medical, strong educational and public safety benefits where I live in Europe....we back home have been model workers for a greedy, new self-proclaimed aristocracy of businessmen who finance bad lawyers in these legislative positions in the state and federal governmental machinery. Remember, you put them there, but you can remove them as well. If Iraq can have a 67% voter turn-out, what is your problem, America??? So the Pew Poll says the political parties are out, incumbants are out, and maybe, just maybe we have awaken to the fact that we the people, and not they the Congress control America. If not, it is time to immigrate as our forebearers did to greener pasturers as the extreme left and right groups tear the American dream apart forever.

[Well, be honest now...-many- in the Muslim world (and Europe too) -are-
really pissed off/hate us because of bush's Iraq fiasco]

Otherwise, I agree with your many extremely valid points--the only one
you may have overlooked is our [out of control] health care system. You
have listed most of the important points that this (and previous)
administrations have not taken to heart.

> As I work and live overseas, a young Lebanese businessman said that
> America was the only hope for the world's peace efforts. But that we

A point that has been made on this NG several times in the past; i.e.,
"Democracy" is NOT "one size fits all".

> ....we back home have been model workers for a greedy, new
> self-proclaimed aristocracy of businessmen

Also as stated on this NG before-- we don't have a democracy; we have a
"Corporatocracy"--government Of, by and for [greedy] corporations.

> Remember, you put them there, but you can remove them as well. If
> Iraq can have a 67% voter turn-out, what is your problem, America???

We can only hope that will occur (but it's probably too late--the
sheeple's brains have mostly been turned into mush via the moronic
media, a lousy educational system and people, who in fear of downsizing
and outsourcing, are just hanging on to their jobs by the skin of their
teeth). It would therefore seem that a political "upheaval" (or whatever
you want to call it), is -very- unlikely.

> If not, it is time to immigrate as our forebearers did to greener

> dream apart forever.

Very sad but true. Unfortunately, the world is -much- smaller than in
our forbearer's day. I am not sure what country people would emigrate to.

Thanks for the intelligent observations and comments!

Source record: 87793

"Echo Charlie" frequency bands

Not many North American radio hobbyists are aware of the "Echo Charlie" bands. They are CB type "freebands" in different parts of the HF spectrum. There hasn't been much activity here in North America up to 2006 (but that is changing!). There has been, for some time, activity in Europe. Check the following frequency ranges:

85 meter band: 3.450 - 3.495 MHz LSB. This Echo Charlie band's calling channel is 3.475 LSB. The band is about 25 kHz either side of the call frequency, with occasional traffic from the UK, Germany, and Holland appearing. There's heavy QRM at times from utility (commercial/military) traffic. Avoid interference with what you may hear, and never, ever attempt communication with any "official" traffic! TAKE CARE!

45 meter band: 6.600 - 6.700 MHz LSB. This is an Echo Charlie range of frequencies with the calling frequency of 6.670 LSB. It's a good band for European traffic. There are often lots of stations from the UK, Germany, France, the Netherlands, and Belgium. Some stations are running power as low as 2 to 5 watts, with other stations reportedly running up to 1,000 watts. Again, there are utility stations in this area (like long range air traffic control!). NEVER GO TO USB! This is very important!

22 meter band: This band has also been experimented with. Channels such as 12.105, 12.130, 12.160, and up to 12.256 MHz have been used, with any clear spots in between. (The originator of this information did not indicate mode, but one would think it is USB.)

21 meter band: This band runs from 13.630 - 13.995 MHz, and modes are AM/USB. It has transcontinental traffic and is only used occasionally. 13.360 - 13.960 MHz is the main hobby pirate broadcasting range. There is also an international CB band where the calling frequency is 13.995 MHz. (In the U.S.A., 13.995 is NOT recommended for CB type communication due to military and MARS traffic! Instead, U.S. stations are encouraged to use 13.555 MHz USB, which is a Part 15 allocation.) Refer to FCC rules and regulations as to what constitutes Part 15 stations.

Non-government frequencies in the U.S.A.

Few U.S. radio hobbyists are also aware of the following frequency ranges that are listed as "non-government exclusive" by the FCC. (The Citizen's Band, and most Ham bands are examples of non-government exclusive allocations.) These are generally considered

"safe" areas around 12, 11, and 10 meters for Freebanding.
1) 25.010 - 25.070 MHz -- use CB antenna & tuner
2) 25.210 - 25.330 MHz -- use CB antenna & tuner
3) 26.175 - 26.480 MHz
4) 26.950 - 26.960 MHz
5) 27.410 - 27.540 MHz
6) 29.700 - 29.890 MHz
7) 29.910 - 30.000 MHz

-- (Also, a number of freeband stations have been known to use HF
marine frequencies.) --

*In Europe this has been a 'pirate' band for many years, referred to by
the
users as '45 metres'. Users seem to be radio enthusiasts , often ex
27Mhz
SSB operators who use this as an alternative band. This 'band' appears
to
extend from around 6600 Khz to 6700. There is a 'calling frequecy ' on
6670Khz where you will often hear stations calling 'CQ45'. Similar nets
also
seem to take place just below 3500Khz.

Additionally, it has been reported that 18.030 MHz LSB has been in use.

- Just a ''hot tip''; a Muslim doing the right thing.

DaviD,

So now you are in favor of the FBI's "TIPS" Program ! ? !

(OT) - We All have a Role in Hometown (Homeland) Security
and a Building a Better {Safer} America; within our Communities,
Cities, States, and throughout the USA.

Concerning an Individuals "Attitude" about: The FBI "TIPS"
and Public Leads {OnLine Reporting}

As a Good American Citizen when you see your Neighbors House
Catch Fire : Do You Call the Fire Department or Dial 911 ?

As a Good American Citizen when you see an Automobile Accident
with Injured People : Do You Call the Police Department or Dial 911 ?

As a Good American Citizen when you see a Lost Child or
Run-Away Pet : Do You Stop and Help Them and then Call
for Help or Dial 911 ?

As a Good American Citizen when you see an Elderly Person
Being Robbed : Do You Call the Police Department or Dial 911 ?

Are You 'simply' Motivated by being a Responsible Good Citizen ?
Or - Are You Living in Fear of "What the Government Will Do To You ?"

The 'problem' is NOT the FBI "TIPS" Program; for it has Always Existed.

[The Problem lays between Your Ears and the Way You Think.]

FBI TIPS => https://tips.fbi.gov/
US DOJ => http://www.usdoj.gov/crt/legalinfo/howtofile_other.htm
CAL AG => http://ag.ca.gov/civilrights/pdf/HC_English.pdf

Yep, we're that close to Huntsville hamfest. Check it out at
http://www.hamfest.org/ . This one promises to be an all time
favorite.

Mr. Davies has announced that he will be on-site doing interviews for
"On The Domestic Front", his internet broadcast that draws literally
millions of listeners from all over the globe.

Beat the rush - pre-order your pizzas at
http://ssl4.papajohnsonline.com/login_selection.jsp so you'll be
assured of prompt delivery.

Or meet us at The Olive Garden if you like. We'll have the large
dining room reserved for Sack-Fest South. Not quite the crowd we have
at Dayton, but still showing promise to be a major event. Mr. Lewis
Louis has graciously agreed to coordinate the event as usual.

Details at http://www.sackfest-south.org .

Cheap seat tickets are $49.95 and good seats range from $69.95 to 89.95
each.

Get 'em while they last at http://www.ticketmaster.com .

Don't miss it.

Tips,eh? In July 2002,two guys with the Jackson city water department were in the front yard of the vacant house next door to me working on the water meter or pretending to be something.As soon as they got through,one of them moved that City Of Jackson Mississippi Water Department pickup truck slowly up and down the street I live on,the other guy peeked in every single one of the snail mail boxes on this street I live on.If I had had some film for my camera at the time I would have taken some pictures of them.I think that had something to do with Tips.They can take their Tips and shove it where the Sun doesn't shine as far as I am concerned.
I very much doubt if any of the people who live on this street including myself receive any ''suspicious'' snail mail.All I ever get are my Popular Science and Popular Mechanics magazines and junk mail and a bill once in a while.

1690. GE Super Radio III Tuner Re-Thread?

Newsgroup: rec.radio.shortwave
Date: 2006-08-12 23:07:12 UTC
From: dan.nygren@gmail.com
Message-ID: <1155424032.601794.147130@74g2000cwt.googlegroups.com>
Source record: 87902

Hi -

Does anyone have any pictures or diagrams of how to re-thread the GE Super Radio III vernier? The Service Manual doesn't discuss it.

I knocked mine loose while fixing my radio. I had a problem last year at this time where after a half hour of use, the radio would slowly tune tself across the band like an invisible hand was turning the dial.

I tried to diagnose it, but the problem went away and didn't return after hit the tuning pot at R2 with freeze spray.

I was OK for about a year, until it re-occurred this summer. I hit R2 with the freeze spray again, and the problem would only go away momentarily. I looked at the bottom of the circuit board and it appeared quite dirty with flux. I theorized that in humid weather the rosin was affecting the circuit. I cleaned the PCB around R2, accidentally knocking off the tuning wheel. Now the problem seems fixed but I can't get everything back together as I didn't take notes, never intending to remove the tuning wheel and thread.

I think the string threads around spools 1,2,3,Loop Capstan Twice?,4,5 and then I can't quite figure out how to thread from 5 to the spring or hook on the wheel and from the spring or hook eventually to spool 6.

(ASCII art facing front of radio)
1 ------------------ Vernier ----------------------------- 2
| 5 |
6 ------------- Spring \ 3
Wheel "D" slot at R2 \ |
Hook \ Capstan Loops?
\ |
-----------4

I'd be grateful if anyone with a GE Super Radio III and a hand mirror could describe or show how to re-thread the vernier through the spools, capstan, and tuning wheel.

I came across this interesting auction which is an interesting way to get a message. I am interested to see how long it will take ebay to pull this 290018634274

this is not my auction but I endorse the method !

From: weatherall <weatherall.2cgl4n@news.radiobanter.com>
Message-ID: <weatherall.2cgl4n@news.radiobanter.com>
Source record: 87925

I bought a Tecsun DR-920 from an eBay seller for just under $30. I
liked the clarity of FM reception but the selectivity is really bad.
From my notes:

* A station on 104.5 MHz was heard on 104.3 - 105.7 MHz.
* A station on 96.5 MHZ was also heard on 94.7 and 91.1 MHz.
* A station on 98.1 MHz was heard on 95.5 MHz.

We all know that most blacks are just one silly millimeter away from
going postal, but lemme tell you, dat Cynthia McKinney sho nuff be
crazy as hail.

You probably saw the news coverage of her being angry, and of her
entourage roughing up cameramen and spewing obsceneties about "crakuhs"
and jews. What really set her off was me making fun of her cornrows and
big lips. I asked her if she used trained fleas with tiny little hoes
and shovels to make cornrows in her hair. I also asked where the
inflation nozzle on her lips was. Well, she was not amused. I mean, she
started screaming worse than a 400-pound welfare sow finding an empty
Cheetos shelf at the supermarket.

But not to worry, I placated her with a nice gift .... a 55 gallon drum
of lipstick.

about half the stuff I buy on eBay has a notable problem, like the Pansonic DR-49 I just got today that had a DEAD S-meter. I took apart the radio and the S-meter had been worked on by a previous owner without success.
the sellers response to my notification is that it was sold as-is and I should speak to the post office and leave him alone.
the auction said the radio WORKED GREAT, now how can a radio with a DEAD S-meter be said to work great.

my main question is does "sold as-is" mean "you're screwed, I can lie as much as I want ! " when in an auction ?

after all if an auction says I am getting something and I don't get it then how can that be justified ?

but did she say anything about fair-use?? probably not because
copyright owners don't believe in fair use. Those type of people makes
us other copyright owners look bad.
Trade-marks are a little different and a little more complex.

I think you also need to understand too is that those claiming I've
violating a trademark, are the same people who claimed the station was
a pirate station a few days ago. These are indiviuals who have no life
and can't get it through their heads that the station will be on the
air for a long, and there is real NOTHING they can do about it.

What frequency do you suggest testing my equipment at? The antenna I believe goes from 131 to 512 mhz. The allocation chart shows nearly every frequency in that range in use for something. Would 140 mhz be ok?

Also, I'm not really sure how far the signal is going. Using the line of sight formula with how small the antenna is, I can't really see the signal going beyond the remote area where I live (which is not close to any airport). To test it I'd pretty much have to broadcast on an FM station, get in my car, and drive until the signal isn't picked up, but this too can be a risky venture.

Source record: 87919

Well,

With all due respect I doubt if you have ever seen the schematics of the two sets or indeed had a look inside them. Having a peek inside it's really clear that the quality of construction of a ICF2010 is inferior to that of a Satellit 700. Regarding schematics, to talk about "carbon copy" could be pushing it a bit but clearly the SAT700 is an attempt to improve the original Sony design. You really have to see the schematics yourself to get the point. In my first message I only mentioned some details quite obvious. (Could start to talk about the dual-loop synthesizer design on both sets using the same components...)

Regarding how Grundig came to use the Sony design, we can only speculate. As far as I can remember at the time in question (15-20 years ago) the now usual OEM/ODM/ref.design sort of business model wasn't that commonplace.

Anyway claiming that SAT700 quality is inferior to ICF2010 quality is stretching it a bit. In my opinion credit should be given to both receivers. For ICF2010 for being progressive in design (in true Sony tradition) and for SAT700 for it's high quality. At present both sets are collectible. The Satellit 700 especially for being the last of the line and Sony for it's revolutionary design (SAM). Regarding the front-end PIN-diode bug the Satellit 700 still manages a higher dynamic range than the ICF2010. Correcting the bug only realizes what the design should have been capable of firstplace. (Responsability of the circuit seems to have been given to a summer trainee perhaps.)

He's either trolling, or thinking about the early problems of the Satellit
800 which had no relation to the 700 at all.

Outside of the poor sync performance, I know of no quality problems the 700
ever had.

OTOH, I distinctly remember a few serious problems the 2010 had, like having
the memory erase when you jostled it, and having the first RF amp die when
you touch the aerial!

I'm sure someone had it on a webpage at some point, because I'm
sure I saw it.

The obvious place to check first is David Moison's GE Superradio FAQ,
at
< http://mysite.verizon.net/vze20h45/radio/superadio/gesr_faq.html >

There are various things there about fixing the calibration, but I
see nothing after a short glance about stringing the dial. It does
link to a page that has the service manual online, for others who
might want it.

I also have this page
<http://www.geocities.com/rbrucecarter/sr3.htm>
bookmarked, but while it might be useful to owners of the radio,
nothing about stringing the dial.

I thought it must have been discussed in this newsgroup, but a quick
search using "ge superradio string", which seems like useful terms,
doesn't show anything.

Feel free to note the dead S-meter on your feedback. Of course, there
is the retaliatory negative feedback. Basically, ebay exists for the
seller.

here is the response the seller gave me when I emailed him about the broken meter and broken whip antenna and the contacts needing work and I told him if he didn't make an adjustment I would have to leave a negative:

YOU DONT HAVE TO WAIT FOR MONDAY TO LEAVE ME A NEGATIVE FEEDBACK YOU CAN DO IT NOW ,,, YOU OPENED UP THIS ITEM HOW THE HELL DO I KNOW YOU DIDNT BREAK THIS RADIO,,, EVEN WHEN YOU TELL THE US POSTAL SERVICE (WHICH I MAY ADD IM GOING TO REPORT THIS TO THEM SO YOU CAN NOT PUT IN YOUR INSURANCE CLAIM)THEY WONT LIKE IT AND NEITHER WOULD E-BAY LIKE IT JUST LIKE I DONT LIKE TO BE BULLIED AROUND SO YOU DO WHATEVER YOU LIKE AND NOW I WILL DO WHAT IS RIGHT FOR MYSELF. THE UNITED STATES POST OFFICE, AND E-BAY HAVE A GREAT LIFE

I have just left him a negative and his rating is now below 97%

VF,

ABOUT - GRUNDIG AG [Germany]
{ Grundig Intermedia GmbH }
FYI - In 2004, England's Alba PLC and Turkey's Beko Elektronik A.S.
jointly took over Grundig Home InterMedia System (HIS), Grundig's
Consumer Electronics Division and currently, the British Alba/Beko
Consortium retain control of Grundig,
GRUNDIG => http://en.wikipedia.org/wiki/Grundig

Alba PLC is a Consumer Electronics Company
that is based in the United Kingdom {England}.
ALBA => http://en.wikipedia.org/wiki/Alba_%28electronics%29

Beko Elektronik A.S. is one of the largest Electronics
Producers in Turkey and much more . . .

Say no to institutionalized interference.
Just say NO to HD/IBOC!

If I were you, Mike, I would forward that e-mail to ebay security. Sounds
like a threat of reprisal to me.
